Our company pays high attentions to the innovation of our Web-Development-Applications study materials. We constantly increase the investment on the innovation and build an incentive system for the members of the research expert team. Our experts group specializes in the research and innovation of our Web-Development-Applications Study Materials and supplements the latest innovation and research results into the Web-Development-Applications study materials timely.

Once we have latest version, we will send it to your mailbox as soon as possible. our Web-Development-Applications exam questions just need students to spend 20 to 30 hours practicing on the platform which provides simulation problems, can let them have the confidence to pass the Web-Development-Applications exam, so little time great convenience for some workers. Our Web-Development-Applications question torrent not only have reasonable price but also can support practice perfectly, as well as in the update to facilitate instant upgrade for the users in the first place, compared with other education platform on the market, the Web-Development-Applications Exam Question can be said to have high quality performance. It must be your best tool to pass your exam and achieve your target.

WGU Web-Development-Applications Exam | New Web-Development-Applications Test Test - Official Pass Certify Reliable Web-Development-Applications Test Tutorial

As the tech industry continues to evolve and adapt to new technologies, professionals who hold the WGU Web Development Applications (Web-Development-Applications) certification are better equipped to navigate these changes and stay ahead of the curve, increasing their value to employers and clients. In today's fast-paced and ever-changing WGU sector, having the WGU Web-Development-Applications Certification has become a necessary requirement for individuals looking to advance their careers and stay competitive in the job market.

WGU Web Development Applications Sample Questions (Q48-Q53):

NEW QUESTION # 48

A web designer evaluates the following CSS rule:

```
.head { color: #0000ff; }
```

Which element is selected as a result?

- A. <head>
- B. <H1>
- C. <div class="head">
- D. <div id="head">

Answer: C

Explanation:

In CSS, a class selector is denoted with a period (.), and it applies to elements with that class attribute.

head targets any element with class="head", such as:

```
<div class="head"> ... </div>
```

"A CSS class selector uses a period (.) followed by the class name. It matches elements whose class attribute includes that class name." References:

CSS Selectors Specification

MDN Web Docs - Class Selectors

W3Schools - CSS Class Selector

NEW QUESTION # 49

Given the following HTML code:

Which line of code should replace the first line to ensure that users can pause and restart the video?

- A. `<video width="360" height="270" controls>`
- B. `<video width="360" height="270" src="">`
- C. `<video width="360" height="270" controls="">`
- D. `<video width="360" height="270" src="" controls="">`

Answer: C

Explanation:

To ensure that users can pause and restart the video, the controls attribute needs to be added to the <video> tag.

This attribute provides the user with controls to play, pause, and adjust the volume of the video. The correct line of code that should replace the first line in the provided HTML to achieve this functionality is:

```
<video width="360" height="270" controls>
```

Here's the comprehensive explanation:

* controlsAttribute: The controls attribute is a boolean attribute. When present, it specifies that video controls should be displayed, allowing the user to control video playback, including pausing, playing, and seeking.

* HTML Structure:

* Original Line:

```
<video width="360" height="270">
```

* Revised Line:

```
<video width="360" height="270" controls>
```

* Usage Example:

```
<video width="360" height="270" controls>
```

```
<source src="video.mp4" type="video/mp4">
```

Your browser does not support the HTML5 video element.

```
</video>
```

In this example, adding the controls attribute provides the user with play, pause, and volume controls.

NEW QUESTION # 50

Which HTML element should a developer use to logically group a set of related HTML elements?

- A. Fieldset
- B. Select
- C. input
- D. Datalist

Answer: A

Explanation:

The <fieldset> element is used to group a set of related HTML elements in a form. It provides a way to logically group related controls and labels.

* Fieldset Element: The <fieldset> element can be used to create a group of form controls, along with an optional <legend> element that provides a caption for the group.

* Usage Example:

```
<fieldset>
```

```
<legend>Personal Information</legend>
```

```
<label for="name">Name:</label>
```

```
<input type="text" id="name" name="name">
```

```
<label for="email">Email:</label>
```

```
<input type="email" id="email" name="email">
```

```
</fieldset>
```

This groups the name and email input fields under the legend "Personal Information".

* W3C HTML Specification on Fieldset

NEW QUESTION # 51

What is used to render images dynamically?

- A. H.264
- B. Canvas
- C. MPEG-4
- D. Ogg

Answer: B

Explanation:

The <canvas> element in HTML5 is used to render images and graphics dynamically through JavaScript. It is a powerful feature for creating graphics, game visuals, data visualizations, and other graphical content directly in the browser.

* Canvas Element: The <canvas> element is an HTML tag that, with the help of JavaScript, can be used to draw and manipulate graphics on the fly.

* Usage Example:

```
<canvas id="myCanvas" width="200" height="100"></canvas>
<script>
var canvas = document.getElementById("myCanvas");
var ctx = canvas.getContext("2d");
ctx.fillStyle = "#FF0000";
ctx.fillRect(0, 0, 200, 100);
</script>
```

In this example, a red rectangle is drawn on a canvas element.

NEW QUESTION # 52

Which CSS transformation method should a developer use to reposition an element horizontally on the 2-D plane?

- A. Scale(x)
- B. Skewx (angle)
- C. Scale (x,y)
- D. Translate(x)

Answer: D

Explanation:

The translateX(n) method in CSS is used to move an element horizontally on the 2-D plane by a specified distance. This transformation repositions the element along the X-axis.

* translateX(n) Method: The translateX(n) function moves an element horizontally by n units. Positive values move the element to the right, while negative values move it to the left.

* Usage Example:

```
element {
transform: translateX(100px);
}
```

In this example, the element is moved 100 pixels to the right.

* Properties:

* n: This represents the distance to move the element. It can be specified in various units such as pixels (px), percentages (%), ems (em), etc.
