C_S43 Premium Files | High-quality SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) 100% Free Latest Demo

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) C_S43 answers real questions can help candidates have correct directions and prevent useless effort. If you still lack of confidence in preparing your exam, choosing a good SAP C_S43 Answers Real Questions will be a wise decision for you, it is also an economical method which is saving time, money and energy.

Many IT certification exam dumps providers spend a lot of money and spirit on advertising and promotion about SAP C_S43 exam lab questions but pay little attention on improving products' quality and valid information resource. They prefer low price strategy with low price rather than excellent valid and high-quality C_S43 Exam Lab Questions with a little more cost. I think high passing rate products is what you need in fact.

Latest C_S43 Demo - C_S43 Reliable Exam Papers

The clients at home and abroad can both purchase our C_S43 study tool online. Our brand enjoys world-wide fame and influences so many clients at home and abroad choose to buy our SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) guide dump. Our company provides convenient service to the clients all around the world so that the clients all around the world can use our C_S43 study materials efficiently. Our company boosts an entire sale system which provides the links to the clients all around the world so that the clients can receive our products timely. Once the clients order our C_S43 cram training materials we will send the products quickly by mails. The clients abroad only need to fill in correct mails and then they get our products conveniently. Our C_S43 cram training materials provide the version with the language domestically and the version with the foreign countries' language so that the clients at home and abroad can use our C_S43 study tool conveniently.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10
Use Phase-Based Maintenance Processing
The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S /4HANA Asset Management. The following features need to be checked:
* Initiate and screen a Maintenance Notification
* Plan Maintenance Order and send it for approval
* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.
Use the following data:

Field	Value
Technical Object	T-PB##
Current Location	Production Line 1
Detection Method	Continuous Condition Monitoring
Operational Effect	Production restricted
Description	Defective pump (phase-based)

* Screen and accept the just created Maintenance Notification.
* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

Field	Value
Technical Object	T-PB##
Operation 0010 - Description	Repair damage
Operation 0010 - Work	2

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 10 Overview
This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.
Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.
* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request).
* Enter the Following Data :
* Technical Object : T-PB48
* Description : Defective pump (phase-based)
* Current Location : Production Line 1
* Detection Method : Continuous Condition Monitoring
* Operational Effect : Production restricted
* Save : Note the notification number generated.
Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.
Step 2: Screen and Accept the Notification
As a "Maintenance Coordinator," you must now review the request.
* Access the Fiori App : Open Screen Maintenance Requests .
* Locate Your Notification : Find the notification you just created for T-PB48.
* Perform Screening :
* Review the details to ensure they are complete.
* Click Accept to move it to the next phase.
Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.
Step 3: Create and Plan the Phase-Based Order
Now you will create the formal work order for the accepted request.
* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
* Enter Planning Data :
* Technical Object : T-PB48
* Operation 0010 Description : Repair damage
* Operation 0010 Work : 2 h
* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.
Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is
"Waiting for Approval"

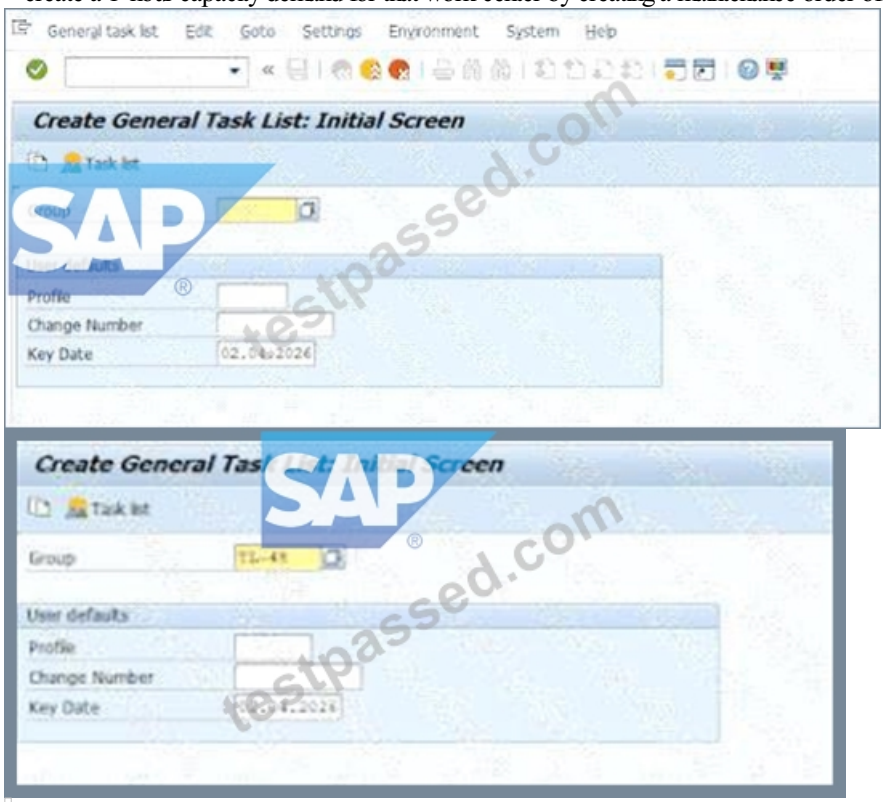
NEW QUESTION # 11
Create and use a Maintenance Work Center
The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.
The following features need to be checked:
* Create a Maintenance Work Center
* Create a capacity demand for a Maintenance Work Center
* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:

Field	Value
Plant	1010
Work Center	ZZ-ME##
Description	Mechanical Maintenance ##
No. Ind. Capacities	5
Capacity	24,00 H

* Create a capacity demand of 1 hour for the just created Maintentance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 3: Create and Use a Maintenance Work Center
Objective
In Task 3, the requirement was to:
* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
* maintain the required capacity values
* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01



Part 1: Create the Maintenance Work Center

Requirement from task file
The task required the following values for the work center:
* Plant = 1010
* Work Center = ZZ-ME42
* Description = Mechanical Maintenance 42
* No. Ind. Capacities = 5
* Capacity = 24.00 H
The task also stated that the work center must be created similar to maintenance work center T-ME00 .

Step-by-step procedure
Step 1: Open work center creation
* Go to SAP GUI command field
* Enter transaction IR01
* Press Enter
Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.
Step 2: Enter initial work center data
On the Create Work Center: Initial Screen , enter:
* Plant = 1010
* Work Center = ZZ-ME42
* Work Center Category = 0005
* In Copy from :
* Plant = 1010
* Work Center = T-ME00
Then press Enter .
The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.
Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.
Step 3: Include capacity data during copy
When the Copy from popup appeared:
* select Capacities
* continue with the green check
This was important because the task required changing capacity-related data:
* No. Ind. Capacities = 5
* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

Step 4: Maintain basic data
On the work center master screen:
* change the description to Mechanical Maintenance 42
This matches the exact description required by the task.
Step 5: Maintain capacity values
Go to the Capacities tab, then open the capacity detail screen.
Maintain or verify:
* No. Ind. Capacities = 5
* Capacity Base Unit = H
* Capacity recalculated to 24.00 H
In our system, the Capacity field was system-calculated and not directly editable.
The final valid values were achieved with:
* Start Time = 08:00:00
* End Time = 17:00:00
* Length of breaks = 01:00:00
* Capacity Utilization = 60
* No. Ind. Capacities = 5
This produced:
* Capacity = 24.00 H
The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.
The resulting calculation was correct and matched the task requirement exactly.
Step 6: Save the work center
* Click Save
Later, when trying to create the same work center again, SAP displayed the system message:

* "Work center ZZ-ME42 in plant 1010 already exists"
Explanation / Verification:
This system message confirmed that the work center had already been created successfully.
Therefore, the creation of ZZ-ME42 was verified as complete.
Part 2: Create a 1-Hour Capacity Demand
Requirement from task file
The task required:
* create a capacity demand of 1 hour
* for the newly created maintenance work center ZZ-ME42
* by creating a maintenance order of type PM01
Step-by-step procedure
Step 7: Open maintenance order creation
* In the command field, enter /nIW31
* Press Enter
Transaction IW31 is used to create a maintenance order.
The /n ensured SAP exited the previous transaction and opened the new one directly.
Step 8: Enter order header data
On the Create Maintenance Order: Initial Screen , enter:
* Order Type = PM01
* Planning Plant = 1010
Then press Enter .
The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01 .
Step 9: Enter order description
On the order header screen, enter a short text such as:
* Capacity demand ZZ-ME42
The task did not prescribe a specific short text, so a meaningful description was used for traceability.
Step 10: Create the first operation
In the first operation area / operations overview, maintain:
* Operation = 0010
* Work Center = ZZ-ME42
* Plant = 1010
* Control Key = PM01
* Work Duration / Work = 1
* Unit = H
Then press Enter .
This operation is the actual source of the capacity demand .
The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .
Therefore, these operation entries were the critical part of fulfilling Task 3.
Step 11: Save the maintenance order
* Click Save
SAP displayed the confirmation message:
* "Order saved with number 4000314"
Explanation / Verification:
This was the final confirmation that the maintenance order had been created successfully.
Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.
Verified completed objects
The following results were verified during execution:
* Maintenance Work Center created
* Work Center = ZZ-ME42
* Plant = 1010
* confirmed by SAP message that the work center already existed when rechecked
* Capacity maintained correctly
* No. Ind. Capacities = 5
* Capacity = 24.00 H
* Capacity demand created
* maintenance order type PM01
* operation assigned to ZZ-ME42
* planned work = 1 H
* Order successfully saved

* SAP confirmation: Order saved with number 4000314

NEW QUESTION # 12
Task 4: Configure and create Technical Objects
The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.
The following features need to be checked:
* Configure and create Functional Locations
* Create, serialize and install Equipment
* Create Functional Location master record ZZ0##-01 and save it. Use the following information:
* Create Equipment master record EQUI-## and save it. Use the following information:
* Serialize the just created Equipment master record EQUI-## . Use the following data:
* Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 4: Configure and create Technical Objects
This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.
Step 1: Create Functional Location Master Record
A Functional Location represents the area at which a maintenance task is to be performed.
* Access the Transaction : Use transaction code IL01 (Create Functional Location).
* Enter Initial Data :
* Functional Location : ZZ048-01.
* Structure Indicator : ZZ48.
* Functional Location Category : T.
* Press Enter .
* Enter General Data :
* Description : Production Line Z48.
* Enter Location and Organization Data :
* Maintenance Plant : 1020.
* Cost Center : 4110.
* Planning Plant : 1020.
* Planner Group : Z48.
* Main WorkCtr : T-ME48.
* Work Center Plant : 1010.
* Save : Click the Save icon.
Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.
Step 2: Create Equipment Master Record
Equipment represents an individual physical object that is maintained as an autonomous unit.
* Access the Transaction : Use transaction code IE01 (Create Equipment).
* Enter Initial Data :
* Equipment : EQUI-48.
* Equipment Category : T.
* Press Enter .
* Enter General Data :
* Description : Drive Motor GR48.
* Save : Click the Save icon.
Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.
Step 3: Serialize the Equipment
Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.
* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.
* Navigate to Serial Data : Go to the SerData (Serial Data) tab.
* Enter Serialization Data :

* Material : T-PM8000.
* Serial Number : EQUI-48.
* Save : Click the Save icon.
Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

Step 4: Install Equipment at a Functional Location
This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.
* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.
* Modify Installation Location :
* Click on the Structure tab.
* Find the FunctLoc field.
* Enter the location: 00-01-ASS-02.
* Save : Click the Save icon.
Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

NEW QUESTION # 13
Check Inspection Lot and record Inspection Results
The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:
* Display the automatically created Inspection Lot
* Record Inspection Results
* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:

* Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used
.

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 13 Overview
This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.
Step 1: Display the Automatically Created Inspection Lot
Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.
* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
* Verify the Following Data :
* Material : T-PM1100
* Plant : 1010
* Inspection Lot Origin : 89 (Miscellaneous)
* Group : CL-DE-00
* Group Counter : 1
Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.
Step 2: Record Inspection Results
This is the process of entering the actual findings from the checklist inspection.
* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
* Select the Lot : Enter your inspection lot number and click Execute .
* Record Results :
* Enter the inspection values for each characteristic listed in the checklist.
* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
* Save : Click the Save (floppy disk) icon.
Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.
The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can

proceed toward completion.

NEW QUESTION # 14
Create a Maintenance Order with Checklists
The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S /4HANA Asset Management. The following features need to be checked:
* Create a Maintenance Order with Checklist
* Display a Maintenance Order with automatically generated Object List and Checklist.
* Create a Maintenance Order using an Order Type which is already configured for the checklist process.
Use the following data:
* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 12 Overview
In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.
Step 1: Create a Maintenance Order with Checklist
You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.
* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).
* Initial Screen :
* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).
* Press Enter .
* Enter Header and Location Data :
* Functional Location : Enter 48-01-PRD-01-03-HD .
* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).
* Assign the Task List :
* Go to the Operations tab or find the task list assignment section.
* General Maintenance Task List : Enter A / T-PMCLEN / 1 .
* Press Enter to validate.
* Save : Click the Save (floppy disk) icon.
Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.
Step 2: Display and Verify the Checklist
After saving, you must verify that the system correctly generated the technical components of the checklist.
* Display the Order : Use transaction code IW33 and enter the order number you just created.
* Verify the Object List :
* Navigate to the Object List tab.
* You should see the equipment or functional location listed here with a link to the checklist.
* Verify the Checklist :
* Look for a button or tab labeled Checklists or Inspection Lot within the order.
* The system should show that a checklist has been automatically generated for the repair operations.
Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 15
