CompTIA SY0-701 Reliable Real Exam & New SY0-701 Test Book

DOWNLOAD the newest ValidTorrent SY0-701 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1jX-9wlxB7yJIRDErT62tQaVN4ZP9nUrm

Simple and easy-to-understand words are used in the content of our CompTIA Security+ Certification Exam SY0-701 exam questions. It is one of the unique benefits of CompTIA Security+ Certification Exam SY0-701 exam material that is not common in other CompTIA Security+ Certification Exam SY0-701. ValidTorrent designed this CompTIA Security+ Certification Exam SY0-701 exam material to work in different systems.

CompTIA SY0-701 Exam Syllabus Topics:

Topic	Details
Topic 1	• Security Architecture: Here, you'll learn about security implications across different architecture models, applying security principles to secure enterprise infrastructure in scenarios, and comparing data protection concepts and strategies. The topic also delves into the importance of resilience and recovery in security architecture.
Topic 2	• Security Operations: This topic delves into applying common security techniques to computing resources, addressing security implications of proper hardware, software, and data asset management, managing vulnerabilities effectively, and explaining security alerting and monitoring concepts. It also discusses enhancing enterprise capabilities for security, implementing identity and access management, and utilizing automation and orchestration for secure operations.
Topic 3	• Threats, Vulnerabilities, and Mitigations: In this topic, you'll find discussions comparing threat actors and motivations, explaining common threat vectors and attack surfaces, and outlining different types of vulnerabilities. Moreover, the topic focuses on analyzing indicators of malicious activity in scenarios and exploring mitigation techniques used to secure enterprises against threats.

Topic 4	• Security Program Management and Oversight: Finally, this topic discusses elements of effective security governance, the risk management process, third-party risk assessment, and management processes. Additionally, the topic focuses on security compliance requirements, types and purposes of audits and assessments, and implementing security awareness practices in various scenarios.
Topic 5	• General Security Concepts: This topic covers various types of security controls, fundamental security concepts, the importance of change management processes in security, and the significance of using suitable cryptographic solutions.

Features of ValidTorrent CompTIA SY0-701 Web-Based Practice Questions

With over a decade's business experience, our SY0-701 test torrent attached great importance to customers' purchasing rights all along. There is no need to worry about virus on buying electronic products. For we make endless efforts to assess and evaluate our SY0-701 exam prep' reliability for a long time and put forward a guaranteed purchasing scheme, we have created an absolutely safe environment and our SY0-701 Exam Question are free of virus attack. Given that there is any trouble with you, please do not hesitate to leave us a message or send us an email; we sincere hope that our SY0-701 test torrent can live up to your expectation.

CompTIA Security+ Certification Exam Sample Questions (Q530-Q535):

NEW QUESTION # 530
Two companies are in the process of merging. The companies need to decide how to standardize their information security programs. Which of the following would best align the security programs?

- A. Both companies following the same CSF
- B. Shared deployment of CIS baselines
- C. Joint cybersecurity best practices
- D. Assessment of controls in a vulnerability report

Answer: A

Explanation:
A Cybersecurity Framework (CSF) provides a structured approach to standardizing and aligning security programs across different organizations. By both companies adopting the same CSF, they can ensure that their security measures, policies, and practices are consistent, which is essential during a merger when aligning two different security programs.
Reference =
CompTIA Security+ SY0-701 Course Content: The course discusses the importance of adopting standardized cybersecurity frameworks (CSF) for aligning security programs during mergers and acquisitions.

NEW QUESTION # 531
Which of the following security threats aims to compromise a website that multiple employees frequently visit?

- A. Watering hole
- B. Supply chain
- C. Impersonation
- D. Typosquatting

Answer: A

Explanation:
The best answer is C. Watering hole.
A watering hole attack occurs when an attacker compromises a website that a targeted group of users commonly visits. The attacker chooses that site because they know the intended victims are likely to access it during normal work activities. Once the site is compromised, the attacker can deliver malware, steal credentials, or exploit browser vulnerabilities.
This exactly matches the scenario in the question: a website that multiple employees frequently visit is targeted for compromise.
Why the other options are incorrect:

A). Supply chainA supply chain attack targets vendors, software providers, or service providers in order to affect downstream customers. That is different from compromising a commonly visited website for a specific group of users.
B). TyposquattingTyposquatting involves creating a fraudulent website with a name similar to a legitimate one so users accidentally visit it. The question describes compromising an existing site people already visit, not creating a lookalike domain.
D). ImpersonationImpersonation involves pretending to be a trusted person or entity. It does not specifically describe compromising a frequently visited website.
From a Security+ perspective, a compromised site used to target a specific population is a classic watering hole attack, so C is correct.

NEW QUESTION # 532
A security analyst discovers that a large number of employee credentials had been stolen and were being sold on the dark web. The analyst investigates and discovers that some hourly employee credentials were compromised, but salaried employee credentials were not affected.
Most employees clocked in and out while they were Inside the building using one of the kiosks connected to the network. However, some clocked out and recorded their time after leaving to go home. Only those who clocked in and out while Inside the building had credentials stolen. Each of the kiosks are on different floors, and there are multiple routers, since the business segments environments for certain business functions.
Hourly employees are required to use a website called acmetimekeeping.com to clock in and out. This website is accessible from the internet. Which of the following Is the most likely reason for this compromise?

- A. A brute-force attack was used against the time-keeping website to scan for common passwords.
- B. A malicious actor compromised the time-keeping website with malicious code using an unpatched vulnerability on the site, stealing the credentials.
- C. ARP poisoning affected the machines in the building and caused the kiosks lo send a copy of all the submitted credentials to a machine.machine.
- D. The internal DNS servers were poisoned and were redirecting acmetimkeeping.com to malicious domain that intercepted the credentials and then passed them through to the real site

Answer: B

Explanation:
The scenario suggests that only the employees who used the kiosks inside the building had their credentials compromised. Since the time-keeping website is accessible from the internet, it is possible that a malicious actor exploited an unpatched vulnerability in the site, allowing them to inject malicious code that captured the credentials of those who logged in from the kiosks. This is a common attack vector for stealing credentials from web applications.
Reference =
CompTIA Security+ SY0-701 Course Content: The course discusses web application vulnerabilities and how attackers can exploit them to steal credentials.

NEW QUESTION # 533
According to various privacy rules and regulations, users have the power to request that all data pertaining to them is deleted. This is known as:

- A. Data retention
- B. Information deletion
- C. Attestation and acknowledgement
- D. Right to be forgotten

Answer: D

Explanation:
The right to be forgotten refers to an individual's legal right, under regulations such as GDPR, to request the deletion of all personal data held about them by an organization. This gives individuals control over their digital footprint and privacy.
Reference:
CompTIA Security+ SY0-701 Official Study Guide, Domain 5.4: "The right to be forgotten is a privacy right allowing individuals to request deletion of their personal data." Exam Objectives 5.4: "Given a scenario, implement data security and privacy practices."

NEW QUESTION # 534
After a breach at a data processing center, an administrator receives a notification that administrative passwords were leaked online. Which of the following should be used to prevent this incident from occurring in the future?

- A. Password management
- B. Password vault
- C. Password policy
- D. Password complexity

Answer: B

Explanation:
A centralized password vault securely stores and manages privileged credentials, encrypting them at rest, controlling access, and enabling strong rotation policies, so administrative passwords are never exposed in plaintext and can't be leaked online.

NEW QUESTION # 535
.....

At any point in the process of buying our SY0-701 exam braindumps, the customer does not need to check the status of the purchase order, because as long as you have paid for it, then you can get it in a second. With all those efficiency, our SY0-701 study engine is suitable in this high-speed society. With strong strength in this career, we can claim that you can only study our SY0-701 learning guide for 20 to 30 hours, you can pass your SY0-701 exam with 100% guarantee.
