Explanation

□

The correct URL from next page can be retrieved by using `response.links['next']['url']`. The use of `response.headers.get('Link')` could be easily replaced by an infinite loop like `'while True:'` and it would be the same. They're just testing our knowledge here. The trick here is that once we reach the last page, `response.links['next']['url']` within the `'try'` context will fail and we'll move to the `'except'` clause and the program will exit.

NEW QUESTION # 82

Refer to the exhibit.

A developer is creating a Python script to use the Webex Teams REST API to list joined spaces, retry after the server-specified amount of time if a "Too many requests" response is received, and print any other error that is received. Drag and drop the code snippets from the left onto the item numbers on the right that match the missing sections in the exhibit to complete the script. Not all code snippets are used.
