NEW QUESTION # 64

What is the recommended minimum number of App connectors needed to ensure resiliency?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

The recommended minimum number of App connectors to ensure resiliency in Zscaler Private Access is 2.

Having at least two App connectors provides redundancy, so if one connector fails or is unavailable, the other can continue to provide access without interruption. This recommendation is critical to maintaining high availability and fault tolerance for internal application access.

The study guide specifies this minimum to ensure continuity and reliability of application access through ZPA.

- **A. Access is granted without sharing the network between the originator and the destination application.**
- B. Connectivity between the originator and the destination application is over IPsec tunnels.
- C. Cloud firewall policies ensure that only authenticated users are allowed access to destination applications.
- D. Trusted network criteria designate the locations of originators which can be trusted.

- A. SAML and Hosted User Database
- B. SCIM and Directory Server Synchronization
