Microsoft AI Business Professional Sample Questions (Q18-Q23):

NEW QUESTION # 18
You are a business user who uses Microsoft 365 apps and services, including Microsoft Teams. You have a work account.
You want to use Microsoft 365 Copilot to help with meetings.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

NEW QUESTION # 19
You receive the following response to a prompt: "Sorry, it looks like I can't respond to this. Let's try a different topic."
What is a possible cause of the response?

- A. The prompt is larger than the allowed context window.
- B. The prompt contains language that violates safety guidelines.
- C. The prompt contains more than five requests.
- D. The prompt is too vague to elicit a response.

Answer: B

Explanation:
Microsoft 365 Copilot follows Microsoft's Responsible AI principles and enforces strict content safety policies. When a prompt violates safety guidelines-such as containing harmful, abusive, illegal, or restricted content-the system may refuse to generate a response. The refusal message shown is consistent with safety filtering behavior.
Generative AI systems include moderation layers that evaluate prompts before generating output. If the prompt is classified as unsafe or non-compliant with policy, Copilot blocks the request and encourages the user to try a different topic.
A vague prompt typically results in a generic or clarifying response rather than a refusal. There is no fixed limit of five requests per prompt. Exceeding the context window usually results in truncation or processing errors, not a safety-based refusal message.
Therefore, the most likely cause of the response is that the prompt contains language that violates safety guidelines.

NEW QUESTION # 20
You are creating a custom agent in the Microsoft 365 Copilot app for the marketing team at your company. The agent will be used to produce marketing collateral, including copy, logos, and artwork.
What should you add to the agent? More than one answer choice may achieve the goal. Select the BEST answer.

- A. image generator
- B. a template
- C. a suggested prompt
- D. code interpreter

Answer: A

Explanation:
When building a custom agent in Microsoft 365 Copilot for marketing use cases, the required capabilities must align with the intended outputs. Marketing collateral includes written copy as well as visual assets such as logos and artwork. According to Microsoft AI Business Professional documentation, generative AI solutions that produce visual creative assets require integrated image generation capabilities powered by multimodal AI models.
Option C is correct because an image generator enables the agent to create visual marketing materials such as logos, artwork, and design elements. While templates and suggested prompts can improve usability and consistency, they do not provide the underlying

capability to generate images. A code interpreter is designed for data analysis, calculations, or technical scripting tasks and is not relevant to creative marketing asset production.

Therefore, to fulfill the requirement of producing both textual and visual marketing collateral, the most essential addition to the custom agent is an image generator.

NEW QUESTION # 21

You are a medical researcher.

You need to ensure that Microsoft 365 Copilot responds to you in a professional manner that is appropriate to your field. What is the best approach to achieve the goal?

- A. In the conversation, attach an example to your prompts.
- B. In the conversation, create a sample prompt and save it to the Copilot Prompt Gallery.
- C. From Settings, configure Custom instructions.
- D. From Settings, configure Copilot Memory.

Answer: C

Explanation:

Custom instructions allow users to define persistent preferences for tone, style, and response behavior across conversations.

Microsoft documentation explains that Custom instructions help tailor Copilot responses to professional roles, communication styles, and domain expectations.

For a medical researcher requiring consistently professional, field-appropriate responses, configuring Custom instructions in Settings ensures that Copilot maintains the desired tone and terminology in future interactions.

Attaching examples influences only a single conversation. Saving prompts to the Prompt Gallery aids reuse but does not enforce tone globally. Copilot Memory stores factual preferences but is not intended for style configuration.

Therefore, the best and most comprehensive approach is to configure Custom instructions in Settings.
