## 100% Pass Quiz 2026 Fortinet Fantastic FCP\_FAZ\_AN-7.4: Reliable FCP - FortiAnalyzer 7.4 Analyst Braindumps Questions

Students often feel helpless when purchasing test materials, because most of the test materials cannot be read in advance, students often buy some products that sell well but are actually not suitable for them. But if you choose FCP\_FAZ\_AN-7.4 test prep, you will certainly not encounter similar problems. Before you buy FCP\_FAZ\_AN-7.4 learning question, you can log in to our website to download a free trial question bank, and fully experience the convenience of PDF, APP, and PC three models of FCP\_FAZ\_AN-7.4 learning question. During the trial period, you can fully understand our study materials' learning mode, completely eliminate any questions you have about FCP\_FAZ\_AN-7.4 test prep, and make your purchase without any worries. At the same time, if you have any questions during the trial period, you can feel free to communicate with our staff, and we will do our best to solve all the problems for you.

### Fortinet FCP - FortiAnalyzer 7.4 Analyst Sample Questions (Q44-Q49):

#### NEW QUESTION # 44

What is the purpose of playbook trigger variables?

- A. To use information from the trigger to filter the action in a task
- B. To store the start the times of playbooks with On\_Schedule triggers
- C. To provide the trigger information to make the playbook start running
- **D. To display statistics about the playbook runtime**

**Answer: D**

#### NEW QUESTION # 45

Exhibit.

What is the analyst trying to create?

- A. The analyst is trying to create an output variable to be used in the playbook.
- B. The analyst is trying to create a report in the playbook.
- C. The analyst is trying to create a trigger variable to be used in the playbook.
- D. The analyst is trying to create a SOC report in the playbook.

**Answer: A**

Explanation:

In the exhibit, the playbook configuration shows the analyst working with the "Attach Data" action within a playbook. Here's a breakdown of key aspects:

- \* Incident ID: This field is linked to the "Playbook Starter," which indicates that the playbook will attach data to an existing incident.
- \* Attachment: The analyst is configuring an attachment by selecting Run\_REPORT with a placeholder ID for report\_uuid. This suggests that the report's UUID will dynamically populate as part of the playbook execution.

Analysis of Options:

\* Option A - Creating a Trigger Variable:

\* A trigger variable would typically be set up in the playbook starter or initiation configuration, not within the "Attach Data" action. The setup here does not indicate a trigger, as it's focusing on data attachment.

\* Conclusion: Incorrect.

\* Option B - Creating an Output Variable:

\* The field Attachment with a report\_uuid placeholder suggests that the analyst is defining an output variable that will store the report data or ID, allowing it to be attached to the incident. This variable can then be referenced or passed within the playbook for further actions or reporting.

\* Conclusion: Correct.

\* Option C - Creating a Report in the Playbook:

\* While Run\_REPORT is selected, it appears to be an attachment action rather than a report generation task. The purpose here is to attach an existing or dynamically generated report to an incident, not to create the report itself.

\* Conclusion: Incorrect.

\* Option D - Creating a SOC Report:

\* Similarly, this configuration is focused on attaching data, not specifically generating a SOC report. SOC reports are generally predefined and generated outside the playbook.

\* Conclusion: Incorrect.

Conclusion:

\* Correct answer: B. The analyst is trying to create an output variable to be used in the playbook.

\* The setup allows the playbook to dynamically assign the report\_uuid as an output variable, which can then be used in further actions within the playbook.
