

Free PDF 2026 CCRN-Pediatric: Useful Reliable Critical Care Nursing Exam Test Practice

CCRN (Pediatric) – AACN Critical Care Certification (2025–2026 Edition) 150 QUESTIONS AND CORRECT ANSWERS

-  Credential for nurses who care for acutely/critically ill pediatric patients
-  Administered by the AACN (American Association of Critical-Care Nurses)
-  Exam content areas:
 - Cardiovascular & pulmonary systems
 - Neurology, endocrine, renal, GI, hematology/oncology, multisystem
 - Psychosocial & behavioral needs
 - Professional caring & ethical practice
-  Validates expertise in pediatric critical care
-  Enhances professional recognition, career growth, and patient outcomes

1. In caring for a patient with salicylate intoxication, the critical care nurse would anticipate which of the following as a primary treatment measure?

- A. Administration of protamine sulfate
- B. Administration of glucose
- C. Transfusion of packed RBCs
- D. Replacement of fluid and electrolytes - **CORRECT ANSWER-D. Replacement of fluid and electrolytes**

2. An adolescent with the developmental age of a 4-year-old requires placement of a chest tube. The best way to prepare the patient for this procedure is to

- A. Use short simple sentences and limit descriptions to concrete explanations.
- B. Show the patient a chest tube and explain how it will feel.
- C. Explain in detail why a chest tube is needed and how it works.
- D. Tell the parents what will be done so they can explain it to their child. - **CORRECT ANSWER-Use short simple sentences and limit descriptions to concrete explanations.**

3. A child admitted with a gunshot wound to the head, accidentally inflicted by an older sibling. The parents are overcome with grief and appear to be ignoring the following statements made by the older sibling: "It was an accident; I didn't mean to do it; I'm sorry!" Which of the following actions by the nurse would be most appropriate?

- A. Discuss the importance of gun safety with the older sibling while the parents are at the bedside.
- B. Seek additional support for the parents for ways they can assist the older sibling

CCRN-Pediatric Related Content - CCRN-Pediatric Passguide

Compared with those practice materials which are to no avail and full of hot air, our CCRN-Pediatric guide tests outshine them in every aspect. If you make your decision of them, you are ready to be thrilled with the desirable results from now on. All exam candidates are awfully sure of our CCRN-Pediatric practice materials and when they meet other needs of the exam, they would rather be our regular buyers. We are sure of anyone who wants to pass the exam as well as our CCRN-Pediatric question materials. We will continue making our sublime materials more useful by keeping adding useful knowledge of this exam into them.

AACN Critical Care Nursing Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

Nurse Sophia is enjoying her lunch at the hospital canteen when a toddler at a nearby table chokes on a piece of food and appears slightly blue. Nurse Sophia should initially:

- A. start mouth to mouth resuscitation
- **B. do about 5 abdominal thrusts**
- C. alert the emergency response
- D. give water to help him swallow

Answer: B

Explanation:

Explanation: At this point, the most effective way to clear the airway of food is to perform abdominal thrusts.

NEW QUESTION # 37

A patient is postoperative day 1 from a laparotomy for appendicitis. Which intervention best prevents surgical wound infection?

- A. Shower twice daily, apply betadine to the skin around the wound, and maintain NPO status
- B. Cleanse the wound with antibacterial soap and water, maintain NPO status, and encourage mobility
- C. Apply a dressing with plastic tape over the wound, encourage handwashing, and offer a high-calorie diet
- **D. Encourage nutritional support as early as possible, bathe daily with pH-balanced cleanser, and encourage mobility**

Answer: D

Explanation:

Early nutritional support, mobilization, and maintaining skin integrity with gentle cleansing are proven strategies to prevent surgical site infections (SSIs). Nutrients support wound healing, while early mobility reduces the risk of complications like pneumonia and impaired circulation.

"Postoperative infection prevention includes early enteral feeding, routine hygiene with non-irritating agents, and ambulation. These reduce bacterial overgrowth, maintain perfusion, and support immune function." (Referenced from CCRN Pediatric - Direct Care: Integumentary, Postoperative Infection Prevention)

NEW QUESTION # 38

After a cleft lip repair, it is important to preserve the integrity of suture line. What is the best position for an infant who had this type of surgery:

- A. side-lying
- B. mother's shoulder
- C. on his abdomen
- **D. on his back**

Answer: D

Explanation:

Explanation: This position prevents incisional contact with the mattress. This is also the best position for infants who are not able to turn.

NEW QUESTION # 39

A 16-year-old patient is unresponsive after a motor vehicle collision. The parents speak another language. While performing the

secondary survey, what should the nurse do next?

- A. Ask if either of the parents speak English
- **B. Continue performing the physical assessment**
- C. Ask a colleague who is bilingual to question the parents
- D. Request a translator from the patient services department

Answer: B

Explanation:

In a trauma situation, the primary and secondary surveys take precedence to assess life-threatening injuries and prioritize interventions. While a certified interpreter should be used for communication as soon as possible, the nurse should not delay the physical assessment during a critical time.

"The priority in trauma is completion of the primary and secondary assessments. While interpreter use is standard, care must not be delayed in critical evaluations." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Cultural Competence and Emergency Protocols)

NEW QUESTION # 40

The treatment of choice for diabetes insipidus should be fluid:

- **A. Replacement and vasopressin (Pitressin)**
- B. Restriction and vasopressin (Pitressin)
- C. Replacement and aldosterone
- D. Restriction and aldosterone

Answer: A

Explanation:

Diabetes insipidus (DI) results from insufficient antidiuretic hormone (ADH), leading to polyuria and dehydration. Management involves fluid replacement to correct volume loss and administration of vasopressin (or desmopressin) to replace deficient ADH. "Central DI is treated with fluid resuscitation to manage hypovolemia and administration of vasopressin or desmopressin to reduce urinary losses and restore water balance." (Referenced from CCRN Pediatric - Direct Care: Endocrine, Water Balance Disorders) Aldosterone is not indicated in the treatment of central DI. Restriction of fluids is contraindicated, as the patient is losing large volumes of free water.

NEW QUESTION # 41

.....

In the present market you are hard to buy the valid CCRN-Pediatric study materials which are used to prepare the CCRN-Pediatric exam like our CCRN-Pediatric latest question. Both for the popularity in the domestic and the international market and for the quality itself, other kinds of study materials are incomparable with our CCRN-Pediatric Test Guide and far inferior to them. Our CCRN-Pediatric certification tool has their own fixed clients base in the domestic market and have an important share in the international market to attract more and more foreign clients.
