Useful C-TS422-2023 Exam Questions Pdf & Leader in Certification Exams Materials & First-Grade Valid Real C-TS422-2023 Exam

C_TS422_2023

Question 1

What are the possible results of a production planning run in Advanced Planning (PP/DS)? Note: There are 2 correct answers to this question

- A. Production order
- B. Planned order
- C. Scheduling agreement schedule line
- D. Purchase order

Answer: B C

Question 2

How can you characterize dependent requirements in material requirements planning? Note: There are 2 correct answers to this question

- A. They are created on assembly level during the planning run.
- B. They are created with exact times in Advanced Planning
- C. They are created when an independent requirement is created for the finished product.
- D. They are only created for multilevel bill of material (BOM) structures.

Answer: A B

Question 3

What are the options if the Dispatched operation status is set for a production order operation? Note: There are 2 correct answers to this question

- A. You can reschedule the operation using infinite scheduling in a planning table.
- B. You can reschedule the operation using lead time scheduling
- C. You can reschedule the operation using finite scheduling in a planning table.
- D. You can reschedule the operation in the Manage Work Center Capacity app.

Answer: C D

Question 4

You want to reduce planning efforts for B and C materials. Which planning procedure do you recommend?

- A. Consumption-Based Planning
- B. Subassembly Planning
- C. Advanced Planning

Experts at PDFVCE strive to provide applicants with valid and updated SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing C-TS422-2023 exam questions to prepare from, as well as increased learning experiences. We are confident in the quality of the SAP C-TS422-2023 preparational material we provide and back it up with a money-back guarantee. PDFVCE provides SAP C-TS422-2023 Exam Questions in multiple formats to make preparation easy and you can prepare yourself according to your convenience way.

Our company pays high attentions to the innovation of our C-TS422-2023 study materials. We constantly increase the investment on the innovation and build an incentive system for the members of the research expert team. Our experts group specializes in the research and innovation of our C-TS422-2023 Study Materials and supplements the latest innovation and research results into the C-TS422-2023 study materials timely.

100% Pass High Pass-Rate SAP - C-TS422-2023 - SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Exam Questions

Pdf

Of course, when you are seeking for exam materials, it is certain that you will find many different materials. However, through investigation or personal experience, you will find PDFVCE questions and answers are the best ones for your need. The candidates have not enough time to prepare the exam, while PDFVCE certification training materials are to develop to solve the problem. So, it can save much time for us. What's more important, 100% guarantee to pass SAP C-TS422-2023 Exam at the first attempt. In addition, PDFVCE exam dumps will be updated at any time. If exam outline and the content change, PDFVCE can provide you with the latest information.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Sample Questions (Q64-Q69):

NEW QUESTION # 64
What does the material type influence?
Note: There are 2 correct answers to this question.

- A. Whether the material is produced in-house, procured externally, or both
- B. Which material master screens appear and in which sequence
- C. Which plant-specific and plant-independent statuses are allowed
- D. Which document types and class categories are allowed

Answer: A,D

Explanation:
The material type is a key attribute that classifies materials according to their characteristics and determines how they are processed in the system. The material type influences the following aspects of material management:
Which material master screens appear and in which sequence: The material type controls which fields are required, optional, or hidden in the material master record. It also determines the order in which the screens are displayed when creating or changing a material master record. Different material types may have different views and fields depending on the business requirements. For example, a raw material may have a purchasing view, while a finished product may have a sales view.
Whether the material is produced in-house, procured externally, or both: The material type defines the procurement type of the material, which indicates how the material is procured. The procurement type can be in-house production, external procurement, or both. The procurement type affects the planning and execution of the material requirements. For example, a material with in-house production procurement type will generate planned orders, while a material with external procurement type will generate purchase requisitions or schedule lines.
The material type does not influence the following aspects of material management:
Which document types and class categories are allowed: The document type is a key attribute that classifies documents according to their business purpose and determines how they are processed in the system. The document type controls the number range, field selection, and status profile of the document. The document type is independent of the material type and can be used for any material type. For example, a purchase order document type can be used for any material type that is procured externally. The class category is a key attribute that classifies classes according to their application area and determines how they are processed in the system. The class category controls the characteristics, object types, and inheritance rules of the class. The class category is independent of the material type and can be used for any material type. For example, a material class category can be used for any material type that has characteristics.
Which plant-specific and plant-independent statuses are allowed: The status is an attribute that indicates the current condition of an object in the system. The status can be plant-specific or plant-independent, depending on whether it applies to a specific plant or to all plants. The status is independent of the material type and can be used for any material type. For example, a material can have a plant-specific status of blocked for quality reasons, or a plant-independent status of discontinued. NEW QUESTION # 65
Which time elements are relevant for lead time scheduling of a production order?
Note: There are 2 correct answers to this question.

- A. Total replenishment lead time
- B. Opening period
- C. Setup time
- D. Float after production

Answer: C,D

NEW QUESTION # 66

Your project uses process orders for the production of liquid chemicals.
What can you define to ensure that production flow only happens in suitable physically connected tanks? Note: There are 2 correct answers to this question.

- A. Resource selection
- B. Resource matrix
- C. Resource network
- D. Resource hierarchy

Answer: A,C

NEW QUESTION # 67

Which of the following questions do you have to answer before you start creating a bill of material (BOM)? Note: There are 2 correct answers to this question.

- A. Is the material type allowed in the BOM?
- B. Which base unit of measure does the material have?
- C. In which storage location is the BOM required?
- D. What status does the BOM have?

Answer: A,D

NEW QUESTION # 68

How can you limit the validity of a bill of material (BOM)? Note: There are 2 correct answers to this question.

- A. By material type
- B. By period
- C. By material status
- D. By plant

Answer: B,D

Explanation:
In SAP S/4HANA, the validity of a bill of material (BOM) (transaction CS01/CS02) can be restricted as follows:
* By plant(B): BOMs are plant-specific by default (field: Plant in CS01). A BOM created for one plant (e.
g., 0001) is not valid in another (e.g., 0002) unless copied or extended (CS07), limiting its applicability to the specified plant.
* By period(C): The BOM header (CS02) includes "Valid From" and "Valid To" dates, restricting its use to a specific time range.
MRP and production orders only select BOMs valid on the required date, allowing versioning or phase-outs (e.g., engineering changes via ECM).
By material type(A) influences which materials can be included in a BOM (e.g., FERT for finished goods), but it doesn't limit the BOM's validity-it's a material attribute.By material status(D) (material master, Basic Data) can block a material from use, but it affects the material, not the BOM's validity directly. This aligns with SAP's BOM management rules.

NEW QUESTION # 69

......

Our C-TS422-2023 study materials have a professional attitude at the very beginning of its creation. The series of C-TS422-2023 measures we have taken is also to allow you to have the most professional products and the most professional services. I believe that in addition to our C-TS422-2023 Exam Questions, you have also used a variety of products. We believe if you compare our C-TS422-2023 training guide with the others, you will choose ours at once.
