Pass Guaranteed 2026 Ping Identity Authoritative PT-AM-CPE: Reliable Certified Professional - PingAM Exam Test Guide

Easy4Engine IT experts specialize in training way which is the latest short-term effective. This training method is very helpful to you and you can achieve the expected result. In particular, it brings convenience to these candidates both working and studying. To the best of our knowledge the information contained in this publication is accurate. Easy4Engine Ping Identity PT-AM-CPE Test Questions and test answers have an advantage over other products with the accuracy of 100%. You may be worried that our PT-AM-CPE practice test is old version. Don't worry, Our Easy4Engine Ping Identity PT-AM-CPE exam dumps is the latest. Free update is for one year.

We provide free update to the clients within one year. The clients can get more PT-AM-CPE guide materials to learn and understand the latest industry trend. We boost the specialized expert team to take charge for the update of PT-AM-CPE practice guide timely and periodically. They refer to the excellent published authors' thesis and the latest emerging knowledge points among the industry to update our PT-AM-CPE Training Materials. After one year, the clients can enjoy 50 percent discounts and the old clients enjoy some certain discounts when purchasing

Exam PT-AM-CPE Practice | Actual PT-AM-CPE Test Pdf

It is known to us that our PT-AM-CPE study materials are enjoying a good reputation all over the world. Our study materials have been approved by thousands of candidates. You may have some doubts about our product or you may suspect the pass rate of it, but we will tell you clearly, it is totally unnecessary. If you still do not trust us, you can choose to download demo of our PT-AM-CPE Test Torrent. The high quality and the perfect service system after sale of our PT-AM-CPE exam questions have been approbated by our local and international customers. So you can rest assured to buy.

Ping Identity Certified Professional - PingAM Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86

When defining a policy and specifying a resource pattern, which of the following statements is true concerning the difference between the wildcards * and -*-?

- A. The wildcard * and the wildcard -*- can be mixed liberally within the same pattern
- B. The wildcard * will match multiple levels in a path, whereas -*- will match only a single level
- C. The wildcard * will match query parameters, whereas -*- will not match query parameters.
- D. Neither the * wildcard nor the -*- wildcard can be used to match the port number

Answer: B

Explanation:
When configuring Authorization Policies in PingAM 8.0.2, defining the Resource Pattern is critical for determining which URLs the policy applies to. PingAM uses specific wildcard symbols to represent dynamic parts of a URI, but they behave differently regarding directory depth.
According to the PingAM documentation on "Policies and Resource Types":
The * Wildcard (One-Level Wildcard): This wildcard matches characters within a single path level. It does not match forward slashes (/). For example, http://example.com/* will match http://example.com/page1 but will not match http://example.com/folder/page1.
The -*- Wildcard (Multi-Level Wildcard): This wildcard is designed to match any number of characters, including forward slashes (/), effectively spanning multiple levels of a directory hierarchy. For example, http://example.com/-*- will match http://example.com/page1, http://example.com/folder/page1, and even http://example.com/deeply/nested/resource.
Statement B is the correct technical distinction. Statement A is incorrect because query parameters are typically handled by specifically enabling "Query Parameter Matching" in the Resource Type configuration, rather than being a primary distinction between these two wildcards. Statement C is technically discouraged because mixing them can lead to unpredictable or overly broad matches that are difficult to debug. Statement D is incorrect because wildcards can be used in the host/port portion of the URL if the resource type is configured to support it. Understanding the difference between single-level (*) and multi-level (-*-) matching is a fundamental skill for AM policy administrators to prevent security gaps.

NEW QUESTION # 87
Which set of Directory Server stores can be enabled for affinity in a PingAM cluster configuration?

- A. Core Token Service Store, Identity Stores, Configuration Store, Policy Data Store
- B. Core Token Service Store, Identity Stores, Configuration Store, Application Data Store
- C. Identity Store, Configuration Store, Policy Data Store, Application Data Store
- D. Core Token Service Store, Identity Store, Policy Data Store, Application Data Store

Answer: A

Explanation:
In a high-availability PingAM 8.0.2 cluster, Affinity Load Balancing is a mechanism used to ensure that requests related to a specific session or configuration are routed to the same Directory Server (DS) instance to avoid issues with replication lag. This is particularly important for stores where data changes frequently or where consistent reads are required immediately after a write.
According to the PingAM documentation on "Load Balancing" and "External Data Stores," affinity can be configured for the following primary stores:
Core Token Service (CTS) Store: This is the most critical area for affinity. Since the CTS handles stateful data like session tokens and OAuth2 tokens that are updated constantly, ensuring that an AM server consistently communicates with a specific DS node (using the HOST:PORT|SERVERID|SITEID syntax) prevents "token not found" errors that might occur if a request reached a DS node before the token was replicated.
Configuration Store: This store holds the central configuration for the AM deployment. In multi-server environments, affinity ensures that configuration changes are read consistently across the cluster.
Identity Stores: These hold the user profiles. While often read-heavy, affinity is used here to improve caching efficiency and ensure that profile updates (like password changes or attribute updates) are reflected immediately in subsequent authentication steps within the same cluster.
Policy Data Store: This stores authorization policies. Similar to configuration, affinity ensures consistent policy evaluation.
Option D is the correct answer because it includes the Core Token Service, Identity Stores, Configuration Store, and Policy Data Store. The "Application Data Store" (mentioned in other options) is often logically grouped with or replaced by the Policy Data Store in many 8.0.2 configurations, but the four stores listed in Option D are the specific ones explicitly called out in the "External Data Stores" secondary configuration documentation for supporting affinity settings.

NEW QUESTION # 88

In PingAM, which OpenID Connect endpoint can be used to validate an unencrypted ID token?

- A. /oauth2/introspect
- B. /oauth2/idtokeninfo
- C. /oauth2/userinfo
- D. /oauth2/tokeninfo

Answer: B

Explanation:

While OpenID Connect (OIDC) is built on top of OAuth2, it introduces specific endpoints for handling ID Tokens (the identity layer). In PingAM 8.0.2, when a client receives an ID Token, it is recommended to validate it locally using the provider's public keys. However, PingAM also provides a convenience endpoint for validation.

According to the "OpenID Connect 1.0 Endpoints" documentation:

/oauth2/idtokeninfo (Option A): This is the dedicated endpoint designed to receive an ID Token as a parameter.8 It validates the token's signature, checks the expiration and audience, and returns the claims contained within the token in a JSON format. This is specifically used for unencrypted ID tokens.

/oauth2/userinfo (Option B): This endpoint returns claims about the authenticated user but requires a valid Access Token in the authorization header, not an ID Token.9

/oauth2/introspect (Option C): This is a standard OAuth2 endpoint (RFC 7662) used to check the metadata and "activeness" of Access Tokens or Refresh Tokens, not the internal identity claims of an OIDC ID Token.10

/oauth2/tokeninfo (Option D): This is a legacy/non-standard endpoint that was used in older versions for Access Token validation and is not the primary OIDC validation endpoint in version 8.0.2.11 Therefore, for the specific task of validating an ID Token and retrieving its claims, /oauth2/idtokeninfo is the correct and authoritative endpoint in the PingAM 8.0.2 OIDC implementation.

NEW QUESTION # 89

Which authentication node can you use in PingAM to add a key:value property to the user's session after successful authentication?

- A. The Set Session Properties node
- B. You have to use a webhook, not a node
- C. The Get Session Data node
- D. The Provision Dynamic Account node

Answer: A

Explanation:

In PingAM 8.0.2 Intelligent Access, the Set Session Properties node is a specialized utility node designed to modify the session object once it is created.

According to the "Authentication Node Reference":

During an authentication journey, data is typically stored in the sharedState. However, sharedState is transient and is destroyed once the tree finishes. If an administrator wants to take a piece of information (e.g., a "Risk Score" calculated during the tree, or a "Branch ID" retrieved from a legacy system) and make it a permanent part of the user's session, they must use the Set Session Properties node.

Functionality: This node allows you to map a value from the sharedState or transientState to a session property name. After the tree reaches a Success node, these properties are persisted in the session (either in the CTS for server-side sessions or the JWT for client-side sessions).

Usage: Once set, these properties can be retrieved later for Response Attributes in policies, or by applications using the /json/sessions endpoint.

Option A (Get Session Data node) is used to retrieve existing properties from an active session, not set them. Option B is incorrect because while webhooks can trigger external logic, the native way to modify the session within a tree is a node. Option C (Provision Dynamic Account node) is for creating user entries in the Identity Store (LDAP), not for managing session-level properties.

Therefore, Set Session Properties (Option D) is the correct technical tool for this requirement in version 8.0.2.

NEW QUESTION # 90

Which of the following are existing script types in PingAM?

A) Decision node script for authentication trees

B) End User user interface theme script

C) OpenID Connect claims script

D) Policy condition script

- **A. A, C and D**
- B. A, B and C
- C. B, C and D
- D. A, B and D

Answer: A

Explanation:
PingAM 8.0.2 is highly extensible through its Scripting Engine, which supports Groovy and JavaScript. However, scripts can only be applied to specific "hooks" or "extension points" defined by the platform.
According to the "Scripting" and "Script Types" reference in the PingAM 8.0.2 documentation, the standard supported script types are:
Decision node script (A): Used within Authentication Trees via the "Scripted Decision Node." These scripts allow for complex logic, such as checking user attributes, calling external APIs, or evaluating risk before deciding which path a user should take in their journey.
OpenID Connect claims script (C): This script type is used to customize the claims returned in OIDC ID Tokens or at the UserInfo endpoint. It allows administrators to transform internal LDAP attributes into the specific JSON format required by OIDC clients.
Policy condition script (D): Used within Authorization Policies. These scripts define custom logic for granting or denying access (e.g., "Allow access only if the user is connecting from a specific IP range and it is between 9 AM and 5 PM").
Why Statement B is incorrect: There is no such thing as an "End User user interface theme script" in the PingAM scripting engine. UI customization (Themeing) in PingAM 8.0.2 is handled through the XUI framework using CSS, HTML templates, and configuration JSON files, or by building a custom UI using the Ping SDKs. It does not use the server-side Groovy/JavaScript scripting engine that governs authentication and authorization logic. Therefore, the valid script types are A, C, and D, making Option D the correct choice.

NEW QUESTION # 91
......

Obtaining a certificate has many benefits, you can strengthen your competitive force in the job market, enter a better company, and double your wage etc. PT-AM-CPE exam bootcamp of us will help you get the certificate successfully. With experienced experts to edit and verify, PT-AM-CPE exam dumps are high quality and accuracy. You can pass the exam just one time. In addition, PT-AM-CPE Exam Bootcamp contain both questions and answers, and you can check the answer easily. Free update for 365 days is available. Our system will send the latest version of PT-AM-CPE exam dumps to you automatically.

Exam PT-AM-CPE Practice: https://www.easy4engine.com/PT-AM-CPE-test-engine.html

If you really want to pass Certified Professional - PingAM Exam exam as soon as possible, Easy4Engine PT-AM-CPE test dump will be your best helper, Using our Certified Professional - PingAM Exam (PT-AM-CPE) exam dumps, you will not have to worry about whatever topics you need to master, You will spend one or two days to practice the PT-AM-CPE dumps questions and remember the key knowledge of PT-AM-CPE dumps torrent skillfully, Ping Identity Reliable PT-AM-CPE Test Guide As long as you click on them, you can find the information easily and fast.

Newsweek magazine printed pictures of the Nicaraguan Reliable PT-AM-CPE Test Guide Contras using Microsoft Excel on portable PCs to plan operations, Lining up a Series of Compression Jobs, If you really want to pass Certified Professional - PingAM Exam exam as soon as possible, Easy4Engine PT-AM-CPE Test Dump will be your best helper.

Reliable PT-AM-CPE Test Guide - Free PDF Quiz 2026 PT-AM-CPE: Certified Professional - PingAM Exam First-grade Exam Practice

Using our Certified Professional - PingAM Exam (PT-AM-CPE) exam dumps, you will not have to worry about whatever topics you need to master, You will spend one or two days to practice the PT-AM-CPE dumps questions and remember the key knowledge of PT-AM-CPE dumps torrent skillfully.

As long as you click on them, you can find the information easily and fast, PT-AM-CPE If you choose valid exam files, you will pass exams one-shot; you will obtain certification in the shortest time with our Ping Identity VCE dumps.
