

Free PDF Quiz PEGACPRSA22V1 - Certified Pega Robotics System Architect 22—Efficient Exam Practice

BTW, DOWNLOAD part of BootcampPDF PEGACPRSA22V1 dumps from Cloud Storage: <https://drive.google.com/open?id=1ZXPPqs2g1DJDPD3I6zPMAueEwdeTRSQV>

Are you planning to attempt the Pegasystems PEGACPRSA22V1 certification exam and don't know where to study for it and pass it with good marks? BootcampPDF has designed the Certified Pega Robotics System Architect 22 (PEGACPRSA22V1) Questions, especially for the students who want to pass the PEGACPRSA22V1 Certification Exam with good marks in a short time. These Certified Pega Robotics System Architect 22 (PEGACPRSA22V1) practice test questions are available in three different formats that you can carry with you anywhere and even do preparation in extra or free time with ease.

The Pega Robotics System Architect 22 certification is recognized globally and is highly valued by organizations that use Pega Robotic Automation to automate their business processes. Certified Pega Robotics System Architect 22 certification is an excellent way to demonstrate your expertise in Pega Robotics and set yourself apart from other professionals in the field.

The PEGACPRSA22V1 exam is a valuable certification for individuals who want to become certified Pega Robotics System Architects. Certified Pega Robotics System Architect 22 certification will validate the candidate's skills and knowledge in the field of Pega Robotics and help them stand out in the job market. PEGACPRSA22V1 Exam covers a wide range of topics related to Pega Robotics and can be taken at any Pearson VUE testing center worldwide.

PEGACPRSA22V1 Practice Online, PEGACPRSA22V1 Reliable Exam Price

Our PEGACPRSA22V1 practice questions are undetected treasure for you if this is your first time choosing them. These advantages help you get a thorough look in details. First of all, the price of our PEGACPRSA22V1 exam braindumps is reasonable and affordable, no matter the office staffs or the students can afford to buy them. Secondly, the quality of our PEGACPRSA22V1 Study Guide is high. You can just look the pass rate of our PEGACPRSA22V1 training quiz, it is high as 98% to 100%.

Candidates who want to take the PEGACPRSA22V1 Certification Exam must meet certain prerequisites. They must have completed the Pega Robotics System Architect Essentials course and have at least six months of experience working with Pega Robotics. They must also have a good understanding of RPA concepts and be familiar with the Pega platform.

Pegasystems Certified Pega Robotics System Architect 22 Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which two of the following tasks are not suitable for Pega Robotic Automation? (Choose Two)

- A. Processes that require access to multiple windows or applications.
- **B. Rarely occurring processes such as sending annual reports.**
- C. Rules-driven processes that users cannot easily perform in Pega Platform.
- **D. Complex processes that require human decision management.**
- E. Repetitive tasks that require manual work.

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation from Pega Robotics System (Exact Extract & Context):

According to the Pega Robotics Automation Design and Implementation Guide:

"Robotic Automation is best suited for rule-based, repetitive, and structured tasks that do not require subjective judgment or complex decision-making." The guide further clarifies:

"Tasks that involve human decision-making, subjective evaluation, or business judgment are not suitable for automation through RPA, as these require contextual understanding and cognitive reasoning." It also specifies:

"Processes that occur infrequently, such as quarterly or annual events, are not ideal candidates for automation due to low execution frequency and limited ROI from automation development and maintenance." Therefore:

* Option A: Complex processes that require human decision management - # Not suitable, as they depend on human reasoning.

* Option D: Rarely occurring processes such as sending annual reports - # Not suitable, since they do not provide sufficient automation value or frequency.

* Options B, C, and E describe processes that are well-suited for Pega Robotics (they are repetitive, multi-application, or rules-driven).

Document References (Exact Extracts Source)

* Pega Certified Robotics System Architect Study Guide - Automation Best Practices Section Final Verified answer: A and D

NEW QUESTION # 24

The project you are working on has two applications: BankerInsight and Pega Finance. You are working on the BankerInsight application method. Which three elements are not available to be used on the application method's design surface? (Choose Three)

- A. BankerInsight controls.
- **B. Globals.**
- **C. Pega Finance controls.**
- **D. Automations that are not scoped within BankerInsight.**
- E. External data sources.

Answer: B,C,D

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

"After adding the application method, Pega Robot Studio includes the application in the Palette. External elements are not available underneath the application, such as:

* Globals

* Other applications

* Automations that are not scoped within the application"

In other words: when you are working within an application method under a specific application (such as BankerInsight), you cannot include items from the global scope (Globals), you cannot include items from other applications (such as Pega Finance controls belong to a different application), nor can you include automations that are not scoped to the same application (automations outside BankerInsight).

Why each option is correct/incorrect:

* A. Automations that are not scoped within BankerInsight - Not available (Correct). According to the extract, "Automations that are not scoped within the application" are listed as external elements that cannot be used.

* B. BankerInsight controls - Available. Controls belonging to the same application are within scope, so you can use these.

* C. External data sources - The documentation snippet does not explicitly list "external data sources" as unavailable under the application method. So by the extract we cannot verify it as not available - thus we do not choose it.

* D. Pega Finance controls - Not available. These belong to a different application (Pega Finance), so they fall under "Other applications" which are external to the current application and so cannot be used.

* E. Globals - Not available. Explicitly listed in the documentation as external elements not available underneath the application. If you like, I can check whether "External data sources" are allowed or not in that context and provide a more detailed explanation with additional reference pages.

NEW QUESTION # 25

You add a MessageDialog component to an automation. Based on the following image, which option shows the configuration settings that generates the message dialog?

- A. Exhibit C
- B. Exhibit B
- C. Exhibit D
- D. Exhibit A

Answer: C

NEW QUESTION # 26

Select the two statements that correctly describe application project items. (Choose Two)

- A. Using an application project item, users can integrate with Windows, web, or text applications that run on the client computer.
- B. An application project item orchestrates the deployment of a robotic solution and monitors the robots of the robot worker pool.
- C. An application project item integrates with Windows applications by using a self-hosted REST service through JavaScript.
- D. Application project items have accessible properties, methods, and events that launch, monitor, and expose enterprise applications for automation.
- E. An application project item is the connection point between Pega Platform and an automation.

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

An application project item in Pega Robot Studio represents an integration layer between the automation project and an external application (Windows, Web, or Text). Each project item defines how to launch, attach, and control the target application.

According to the Pega Robotics System Design and Implementation Guide, in the section "Application Project Items Overview", it states:

"An application project item defines the interaction between a robotic solution and an external application.

It provides properties, methods, and events that allow the automation to start, monitor, and control the target application.

Pega Robot Studio supports application project items for Windows, Web, and Text adapters, enabling integration with all major enterprise application types." Detailed Reasoning:

* Option A is correct because application project items are the mechanism by which Pega Robotics integrates with Windows, Web, and Text applications on the client machine.

* Option E is correct because each application project item exposes properties, methods, and events that control application behavior (for example, launch, close, monitor, or read UI data).

* Option B is incorrect - Pega Platform integration is handled through Robot Manager or Runtime API, not through application project items.

* Option C is incorrect - Application items do not use REST or JavaScript; these are specific to web connectors.

* Option D is incorrect - Deployment orchestration and robot monitoring are performed by Robot Manager, not by an application project item.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Application Project Items Overview and Integration section (Pega Robotics 19.1 and later).

NEW QUESTION # 27

When interrogating a Windows control, the drag and drop Default interrogation method does not work. You decide to use the Create Control option to interrogate the control.

From the Interrogation Steps list, move all of the options to the Ordered Interrogation Steps column and place them in the correct order.

Answer:

Explanation:
