EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49
Question:
Which two interfaces does an OSD (Object Storage Device) gateway typically present to applications?

- A. SSH and SMB
- B. HTTP and HTTPS
- C. REST and SOAP APIs
- D. File-based interfaces like NFS and CIFS

Answer: C

Explanation:
OSD gateways provide access to object storage systems through APIs. The most common interfaces are:
* REST (Representational State Transfer): A stateless protocol using standard HTTP methods, widely used for web services.

* SOAP (Simple Object Access Protocol): A protocol for exchanging structured information in web services, using XML.
These APIs allow applications to interact with object storage systems over HTTP/HTTPS protocols.
* SSH and SMB: SSH is for secure shell access; SMB is for file sharing, not typically used for object storage.
* HTTP and HTTPS: These are transport protocols; while used by REST and SOAP, they are not interfaces themselves.
* NFS and CIFS: File-based interfaces, not used for object storage.

NEW QUESTION # 50
Question:
What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Reduces the cost of protecting data
- B. Reduces required maintenance time for IT resources
- C. Maximizes application and information availability
- D. Avoids security risks that expose business data

Answer: C

Explanation:
Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensuremaximum application and information availability. They protect data in the event of:
* Local failures(disk, server, or site outages)
* Natural disasters(floods, fires)
* Ransomware attacks
By having off-site copies and failover options, businesses maintain continuous access to critical data.

NEW QUESTION # 51
Question:
A company is planning to implement an FC-NVMe SAN. Other than servers with NVMe HBAs, which two other components are required to build this type of SAN?

- A. A dedicated 100 Gb/s Ethernet network
- B. NVMe storage systems
- C. Specialized NVMe-oF drivers on all servers
- D. Only NVMe SSDs in servers
- E. FC-NVMe switches

Answer: B,E

Explanation:
To implement anFC-NVMe SAN(NVMe over Fibre Channel), you need:
NVMe storage systemsthat expose NVMe namespaces.
FC-NVMe capable switchesthat support the new NVMe protocol over Fibre Channel.
Servers with NVMe HBAs(already mentioned in the question).
* Option B:Ethernet networks are for NVMe-oF over TCP/RoCE, not FC-NVMe.
* Option E:These drivers are for TCP/RoCE, not FC transports.

NEW QUESTION # 52
Question:
What is a read miss in cache operations?

- A. Fetching requested data that is already in cache
- B. Fetching data that is not in cache
- C. Deleting data from the cache
- D. Writing data to the cache

Answer: B

Explanation:
Aread missoccurs when the data requested by the host isnotavailable in the cache. As a result, the storage system must fetch the data from the slower disk storage (back-end), leading to higher latency.
* Cache hit:Data is already in cache # faster response.
* Cache miss (read miss):Data not in cache # fetched from the disk.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Cache Operations and Intelligent Storage Systems.

NEW QUESTION # 53
Question:
Which layer of the OSI model does a router primarily operate at?

- A. Layer 3
- B. Layer 2
- C. Layer 7
- D. Layer 4

Answer: A

Explanation:
Routers are networking devices that determine the optimal path for data packets to travel across networks.
They primarily operate at Layer 3 of the OSI model, known as the Network Layer. This layer is responsible for logical addressing and routing, enabling data to move between different networks.
* Layer 2 (Data Link Layer):Handles physical addressing and is the primary domain of switches.
* Layer 3 (Network Layer):Manages logical addressing (IP addresses) and routing; the main operational layer for routers.
* Layer 4 (Transport Layer):Ensures reliable data transfer but is not the primary layer for routers.
* Layer 7 (Application Layer):Interfaces with end-user applications; not relevant to routing functions.
