

First-Grade 300-615 Exam Bootcamp & Leader in Qualification Exams & Useful 300-615: Troubleshooting Cisco Data Center Infrastructure

P.S. Free & New 300-615 dumps are available on Google Drive shared by PassTorrent: https://drive.google.com/open?id=1eVykMOvNcfbt9Sl_iCbm0BNYyxC4xrQ

If you still spend a lot of time studying and waiting for 300-615 qualification examination, then you need our 300-615 test prep, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our 300-615 valid practice questions have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our 300-615 Study Materials have many advantages, and you can free download the demo of our 300-615 exam questions to have a check.

Cisco 300-615 exam is a 90-minute test that consists of 60-70 questions. 300-615 exam covers a range of topics such as troubleshooting Cisco data center infrastructure, troubleshooting network, storage, and compute platforms, and troubleshooting automation and orchestration. 300-615 Exam is available in English and can be taken at any Pearson VUE test center or online.

300-615 Pdf Version | Reliable 300-615 Test Cram

One of the main unique qualities of the PassTorrent Cisco Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Troubleshooting Cisco Data Center Infrastructure (300-615) PDF dumps and Web-based software without installation. Troubleshooting Cisco Data Center Infrastructure (300-615) PDF questions work on all the devices

like smartphones, Macs, tablets, Windows, etc.

Cisco Troubleshooting Cisco Data Center Infrastructure Sample Questions (Q35-Q40):

NEW QUESTION # 35

Refer to the exhibit. A network engineer creates an EEM script to trigger an SNMP notification when a user enters configuration mode, but the trap is not received when the condition is met. Which action resolves the issue?

- A. Modify cli match "conf t" to "snmp match "conf t"
- B. Append action 2.0 cli "conf t" to the script
- C. Modify snmp-trap strdata "Configuration changed" to syslog msg Configuration changed
- **D. Append action 2.0 event-default to the script**

Answer: D

Explanation:

Reference:

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus9000/sw/6-x/system_management/configuration/guide/b_Cisco_Nexus_9000_Series_NX-OS_System_Management_Configuration_Guide/sm_12eem.html

NEW QUESTION # 36

Refer to the exhibit.

The script fails to bring up Ethernet 1/2 when Ethernet 1/1 goes down. Which change enables the script to run as intended?

- A. Include an action to manually shut down Ethernet 1/1
- **B. Add an action to configure the terminal**
- C. Set the port VLAN
- D. Configure an enable action

Answer: B

Explanation:

Add an action to configure the terminal is the required fix because the automation failure is caused by execution context, syntax, or resource state around The, Ethernet, Set. On Cisco Nexus switches, automation is not a single feature; EEM policies, CLI actions, Guest Shell Linux commands, REST payloads, and scheduled jobs are evaluated by different subsystems. A script can fail even while the switch itself has connectivity or the command works interactively. The selected answer supplies the missing requirement, such as the correct event/action, DNS or resource setting, API URI, payload format, feature enablement, or reboot needed for a Guest Shell change to take effect. The other choices address adjacent features but do not satisfy the failing subsystem. After applying the fix, the engineer should verify the policy registration, job result, API response code, or Guest Shell runtime state and confirm that the intended command is no longer blocked or silently ignored.

NEW QUESTION # 37

Refer to the exhibit.

An engineer fails to implement a Cisco UCS Manager integration manager. The credentials and IP connectivity between Cisco APIC and UCS Manager are configured as expected. Which action resolves the issue?

- A. Disable HTTP to HTTPS redirection in Cisco UCS Manager
- **B. Install ExternalSwitch app in the APIC controller**
- C. Enable JSON API on the Cisco UCS Manager
- D. Change the Integration Manager name to FQDN of the Cisco UCS Manager

Answer: B

NEW QUESTION # 38

Refer to the exhibit. EVPN must be configured using Cisco Nexus 9000 Series Switches, but the MAC and IP address information fails to be learned in the control plane. Which command must be added to the configuration to resolve the issue?

- A. ingress-replication protocol bgp
- B. host-reachability protocol static
- C. host-reachability protocol bgp
- D. ingress-replication protocol static

Answer: C

Explanation:

The correct remediation is host-reachability protocol bgp. In Cisco data center troubleshooting, the first priority is to isolate whether the failure is caused by the underlay, overlay control plane, first-hop gateway behavior, or a consistency parameter. This item is centered on EVPN, BGP, Cisco Nexus, Nexus 9000, Cisco Nexus 9000, so the selected action targets the condition that prevents normal forwarding rather than masking the symptom. Cisco Nexus and ACI guidance treats vPC, VXLAN EVPN, OTV, OSPF, BGP, HSRP, and LACP issues as state-dependent technologies: a neighbor, peer, VLAN, VNI, multicast group, timer, MTU, or policy mismatch can leave the protocol partially operational while traffic is still dropped. The rejected alternatives either change unrelated attributes, introduce a new inconsistency, or affect only a secondary behavior. The operational check after applying the fix should be to confirm adjacency or peer state, validate the relevant route/MAC/endpoint table, and test traffic in the affected VLAN or VRF. This aligns with Cisco DCIT network troubleshooting methodology for isolating control-plane state before changing data-plane policy.

NEW QUESTION # 39

Refer to the exhibit.

A certificate is implemented on the security configuration on the Cisco ACI controller. A customer receives a "Connection Not Secure" error in a browser every time the customer logs in to the Cisco APIC GUI. Which action resolves the issue?

- A. Add a 1536-bit key to the APIC GUI.
- B. Use a browser that supports keys of 2048 bits.
- C. Include a private key with the certificate.
- D. Configure a corporate certificate authority for the certificate.

Answer: B

NEW QUESTION # 40

.....

This is an era of high efficiency, and how to prove your competitiveness, perhaps only through the 300-615 certificates you get is the most straightforward. But the time is limited for many people since you may be caught with other affairs. With our 300-615 study materials, all your problems will be solved easily without doubt. We can provide not only the trustable and valid 300-615 Exam Torrent but also the most flexible study methods. And we can confirm that you are bound to pass your 300-615 exam just as numerous of our other customers do.
