“There is no royal road to learning.” Learning in the eyes of most people is a difficult thing. People are often not motivated and but have a fear of learning. However, the arrival of CT-PT study materials will make you no longer afraid of learning. CT-PT study material provides you with a brand-new learning method that lets you get rid of heavy schoolbags, lose boring textbooks, and let you master all the important knowledge in the process of making a question. Please believe that with CT-PT Study Materials, you will fall in love with learning.

The pass rate is 98% for CT-PT exam bootcamp, and if you choose us, we can ensure you that you can pass the exam and obtain the certification successfully. In addition, CT-PT exam materials are edited by professional experts, therefore they are high-quality, and you can improve your efficiency by using CT-PT Exam braindumps of us. We offer you free demo to have a try before buying CT-PT training materials, so that you can know what the complete version is like. We have online and offline chat service for CT-PT training materials, and if you have any questions, you can consult us.

## CT-PT Valid Dumps, Reliable CT-PT Exam Cram

When candidates don't practice with the latest CT-PT exam questions, they fail and lose their precious resources. For candidates who wish to clear the CT-PT exam in a short time, TestKingFree offers the latest and actual ISTQB Exam Questions. Our ISTQB Certified Tester - Performance Testing (CT-PT) exam questions are excellent and ensure that users succeed in one go. Authentic

CT-PT Exam Questions are available in these formats: web-based practice exam, desktop practice test software, and PDF format. Since every test taker has unique learning styles, TestKingFree has designed these formats to meet the practice needs of CT-PT exam candidates.

## ISTQB CT-PT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Common Failures in Performance Testing and Their Causes: This section of the exam measures the skills of Performance Engineers and outlines frequent failure modes, including slow responses at various load levels, degraded performance over time, and system crashes under peak conditions. It provides examples of underlying causes such as resource leaks, insufficient capacity, and poor handling of spikes or concurrency, illustrating why robust planning and monitoring are crucial for reliable performance.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>The Concept of Load Generation: This section of the exam measures the skills of Software Test Analysts and discusses how representative loads are modeled and produced to simulate user or process behavior. It explores methods such as user interface inputs, crowdsourcing, API-based calls, or protocol capture and playback, emphasizing the need for repeatable loads that accurately reflect real-world conditions.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Testing Types in Performance Testing: This section of the exam introduces the distinction between static and dynamic performance testing. It shows how reviews of requirements, architecture, and code can identify risks before coding is complete, and how runtime checks of resource utilization and response times reveal issues that only appear when the system is in operation.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Types of Performance Testing: This section of the exam measures the skills of Software Test Analysts and covers various approaches such as load, stress, scalability, spike, endurance, concurrency, and capacity testing. It explains how each type evaluates system behavior under different conditions, helping testers and stakeholders understand how the system handles both expected and extreme usage scenarios.</li> </ul>

## ISTQB Certified Tester - Performance Testing Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Which of the following should be a key part of your test acceptance criteria in your performance test plan?

- A. Documenting previously baselined performance metrics in order to compare these to the new performance measurements
- B. Highlighting any technical differences in the hardware between the test environment and the production environment**
- C. Describing the system under test in order to provide context to the metrics
- D. Convincing technical and business stakeholders to provide realistic performance goals for the regional servers

**Answer: B**

Explanation:

One of the most critical test acceptance criteria in performance testing is to ensure that the hardware in the test environment is comparable to production. Differences in CPU, memory, disk I/O, or network infrastructure can distort performance results.

Option A (Convincing stakeholders to set goals) is a planning activity, not an acceptance criterion.

Option B (Describing the system under test) is important but does not directly affect test acceptance.

Option D (Comparing baselined metrics) is useful, but without a comparable test environment, baseline metrics may be misleading.

### NEW QUESTION # 19

What is an advantage of aggregating the results of performance testing?

- A. Aggregated results provide more detail and allow for a more complete analysis of the test.
- B. It is easier for stakeholders to draw a correct conclusion from aggregated results.**
- C. Aggregated results show when testing has been completed.
- D. Testing is expedited when the results are aggregated.

**Answer: B**

Explanation:

Aggregating test results helps stakeholders understand performance trends by combining data points from multiple test runs. This makes it easier to draw conclusions about system behavior.

Option A is incorrect because aggregation may reduce detailed visibility, not increase it.

Option B is incorrect because aggregation does not expedite testing itself.

Option D is incorrect because aggregated results do not indicate test completion.

#### NEW QUESTION # 20

Which of the following is a typical performance risk associated with mobile, browser-based, and embedded real-time architectures?

- A. Internet connectivity issues
- B. Misconfigured host machine
- C. Unexpected loads due to API accessibility
- D. Slow hard disk speed

**Answer: C**

Explanation:

Mobile and browser-based applications often rely on APIs for data retrieval and processing. Unexpected API load can cause latency issues, bottlenecks, and system crashes.

Option A (Hard disk speed) is not a major issue in cloud-based or mobile systems.

Option B (Misconfigured host machine) affects on-premise systems, not mobile/browser-based applications.

Option D (Internet connectivity issues) is a user-side issue, not a system performance risk.

#### NEW QUESTION # 21

What challenge must be considered when using crowds to emulate load generation?

- A. This type of load generation is more suitable for mainframe applications.
- B. The load generation method is less sensitive to changes in the system under test.
- C. This technique is more precise than other methods of load generation.
- D. The load generation will be difficult to reproduce.

**Answer: D**

Explanation:

Crowd-based load generation relies on real users from different locations, making test conditions highly variable. This makes it difficult to reproduce the same test scenario multiple times under identical conditions.

Option B (Less sensitive to changes) is incorrect because crowd-based load is highly sensitive to external conditions (network, device types, etc.).

Option C (Suitable for mainframe applications) is incorrect because crowd-based load testing is typically used for web and cloud applications, not mainframes.

Option D (More precise than other methods) is incorrect because crowd-based load testing lacks precision due to real-world inconsistencies.

#### NEW QUESTION # 22

Which of the following performance script types measures network response times?

- A. Protocol-level scripts
- B. API scripts
- C. GUI scripts
- D. HTTP scripts

**Answer: A**

Explanation:

Protocol-level scripts measure the actual response times of network requests, making them ideal for analyzing network latency, bandwidth issues, and server response times.

Option A (GUI scripts) measure user interactions, not network timing.

Option B (API scripts) measure API interactions but do not provide detailed network response time analysis.  
Option C (HTTP scripts) measure web requests but lack low-level network insights.
