Real Peoplecert ITIL-4-Specialist-High-velocity-IT Exam Questions -The Greatest Shortcut Towards Success

Young people are facing greater employment pressure. It is imperative to increase your competitiveness. Selecting ITIL-4-Specialist-High-velocity-IT learning quiz, you can get more practical skills. First, you will increase your productivity so that you can accomplish more tasks. Second, users who use ITIL-4-Specialist-High-velocity-IT Training Materials can pass exams more easily. An international ITIL-4-Specialist-High-velocity-IT certificate means that you can get more job opportunities. Seize the opportunity to fully display your strength. Will the future you want be far behind?

Peoplecert ITIL 4 Specialist: High-velocity IT Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

A legacy financial system requires the user to manually enter the time and date of the transaction to meet regulatory requirements. A recent internal audit has shown that these fields are often blank. Which are effective controls that could improve compliance?

1. Modify the application to automatically add the current time and date when transaction is entered
2. Establish a communication plan to remind users of the importance of time and date on transactions
3. Develop a goals cascade so all staff know their role in achieving company goals
4. Create a report showing non-compliant records and take action to correct

- A. 1 and 2
- B. 1 and 4
- C. 2 and 3
- **D. 3 and 4**

Answer: D

NEW QUESTION # 31

The IT team in a large enterprise is replacing an important application used for internal communication and collaboration. The team is very enthusiastic about the new application and believes it enables new and better ways of working. Pilot users, however, are reluctant to use the new features and just replicate old ways of working in the new system.

How can a 'service mindset' improve the situation?

- A. By limiting user access to only the new features of the application
- B. By creating strict policies to enforce the use of new features
- **C. By encouraging users to understand the features of the new application, and how it can contribute to the achievement of the enterprise's objectives**
- D. By simplifying the new application to make it identical to the old one

Answer: C

NEW QUESTION # 32

An organization experienced a security attack. A hacker accessed a system using login information gathered from social media sites. The incident was identified quickly and systems were restored without significant loss.

Which type of control should be improved?

- A. Integrity
- B. Detection
- C. Correction
- **D. Prevention**

Answer: D

Explanation:

The scenario says the attack was identified quickly and systems were restored without significant loss. That means detection and corrective response were relatively effective. The weakness was that the attacker was able to gain access in the first place. Therefore, the type of control needing improvement is prevention. This could include stronger identity protection, user awareness, multi-factor authentication, credential monitoring, and better social engineering resistance. D is correct because the issue occurred before the detection stage; the preventive safeguards were insufficient.

NEW QUESTION # 33

An organization is considering its options for mitigating service continuity risks in an effort to ensure resilient operations. It has determined alternative sites that are suitable for use to resume normal operations in the event of a natural disaster, established data backup capabilities and identified manual ways of working.

Which would be the BEST option this organization could consider to complete its overall risk mitigation?

- A. Ensure the availability of data
- B. Ensure the physical security of the sites
- **C. Ensure the plan is tested**
- D. Ensure the plan is clear and concise

Answer: C

Explanation:

The organization has already identified alternate sites, backup capabilities, and manual workarounds. The major remaining gap is proving that these arrangements will actually work when needed. The best next step is to test the continuity plan.

A plan can look good on paper and still fail under real conditions. Testing validates roles, dependencies, timing, recovery assumptions, communication paths, and the practical usability of backup and recovery methods. In HVIT, resilient operations depend on evidence-based confidence, not just documented intentions.

A is useful but insufficient. B appears partly addressed already through backup capabilities. D may matter, but it does not complete the continuity capability in the way testing does. So C is the strongest answer.

NEW QUESTION # 34

An organization has recently made improvements to how users request new phones, track their arrival and get help setting the phone up.

Which practice has been most affected by these improvements?

Answer:

Explanation:

Service request Management

NEW QUESTION # 35
