Mule-101 Exam Certification Cost - Exam Mule-101 Dumps

If you want to become a future professional person in this industry, getting qualified by Salesforce certification is necessary. Now, pass your Mule-101 actual exam in your first time by the help of Exam-Killer study material. Our Mule-101 pdf torrent contains the best relevant questions and verified answers which exactly matches with the Mule-101 Actual Exam and surely helps you to pass the exam. Besides, one year free update of Mule-101 practice torrent is available after purchase.

On each attempt, the Salesforce Mule-101 practice test questions taker will provide a score report. With this report, one can find mistakes and remove them for the final attempt. A situation that the web-based test creates is similar to the Mule-101 Real Exam Questions. Practicing in this situation will help you kill Salesforce Certified MuleSoft Integration Foundations (Mule-101) exam anxiety. The customizable feature of this format allows you to change the settings of the Salesforce Certified MuleSoft Integration Foundations (Mule-101) practice exam.

Exam Mule-101 Dumps | Mule-101 Trustworthy Source

Use this Mule-101 practice material to ensure your exam preparation is successful. Mock exams at Exam-Killer are available in Mule-101 desktop software and web-based format. Both Salesforce Mule-101 self-assessment exams have similar features. They create an Salesforce Mule-101 actual test-like scenario, point out your mistakes, and offer customizable sessions.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q56-Q61):

NEW QUESTION # 56
Which role is primarily responsible for building API implementations as part of a typical MuleSoft integration project?

- A. Integration Architect
- B. Operations
- C. API Designer
- D. API Developer

Answer: D

Explanation:
API Developer: This role is responsible for the actual coding and implementation of the API. They use Anypoint Studio to build the Mule flows, configure connectors, write DataWeave transformations, and ensure the API functions according to the design specification1.
Why others are incorrect:
API Designer: Responsible for writing the RAML/OAS contract (specification) in Design Center, usually before implementation begins2.
Integration Architect: Responsible for high-level design, pattern selection, and governance, not the day-to-day coding of flows3.
Operations: Responsible for deployment, monitoring, and maintenance after the application is built4.

NEW QUESTION # 57
According to MuleSoft, which principle is common to both Service Oriented Architecture (SOA) and API-led connectivity approaches? 11

- A. Service statefulness
- B. Service centralization
- C. Service reusability
- D. Service interdependence

Answer: C

Explanation:
Comprehensive and Detailed Explanation:
The Shared Goal: Both SOA (an older architectural style) and API-led Connectivity (MuleSoft's modern approach) aim to solve the problem of "Spaghetti Code" by breaking monolithic applications into smaller pieces.
Reusability: The core promise of both is Reusability.
SOA: Aimed to create reusable web services (often SOAP).
API-led: Focuses on creating reusable Assets (System, Process, and Experience APIs) that can be discovered and self-served by other teams.
The Difference: While the goal (Reuse) is the same, SOA often failed due to heavy governance and lack of discoverability. API-led connectivity improves on this by emphasizing consumption and self-service via the Anypoint Exchange.

NEW QUESTION # 58
According to MuleSoft, what action should an IT organization take regarding its technology assets in order to close the IT delivery gap?

- A. Focus project delivery efforts on custom assets that meet the specific requirements of each individual line of business
- B. Make assets easily discoverable via a central repository
- C. Hire additional staff to meet the demand for asset creation required for approved projects and timelines
- D. Create weekly meetings that all members of IT attend to present justification and request approval to use existing assets

Answer: B

Explanation:
The Key to Speed: You cannot close the delivery gap by working harder (hiring more staff) or by creating custom code for every project (custom assets). You must leverage Reuse.
Discoverability is Critical: Reuse is impossible if developers don't know that an asset exists.
Anypoint Exchange: By publishing assets (APIs, connectors, fragments) to a central repository (Exchange) and making them searchable and documented, organizations enable "Self-Service." Developers can find what they need instantly, drastically reducing the time to deliver new projects.

NEW QUESTION # 59
A team has completed the build and test activities for a Mule application that implements a System API for its application network. Which Anypoint Platform component should the team now use to both deploy and monitor the System API implementation?

- A. API Manager

- B. Anypoint Exchange
- C. Design Center
- D. Runtime Manager

Answer: D

Explanation:
Runtime Manager: This is the interface within the Anypoint Control Plane used to manage the lifecycle of deployments5.
Capabilities:
Deploy: You upload the JAR file here to deploy it to CloudHub, Runtime Fabric, or On-Prem servers.
Monitor: Once deployed, it provides dashboards for CPU usage, Memory usage, and status (Started/Stopped).
Why others are incorrect:
API Manager: Manages policies (security) and gateways, not the deployment of the application artifact itself.
Design Center: For creating the app, not deploying it.

NEW QUESTION # 60
According to MuleSoft's API development best practices, which type of API development approach starts with writing and approving an API contract?

- A. Agile
- B. Implement-first
- C. Catalyst
- D. Design-first

Answer: D

Explanation:
Design-First: This approach dictates that the API Contract (the Specification, e.g., RAML/OAS) must be written, reviewed, and approved before any implementation code is written11.
The Contract: The "Contract" serves as the agreement between the API provider and the consumer.
Why others are incorrect:
Implement-first: You write the code (Mule flows) first, and the contract is generated from the code (or ignored).
Catalyst: Is a broader delivery methodology, not specifically the "Contract-first" technical approach.
