Order-Management-Administrator模擬試験最新版 & Order-Management-Administrator資格勉強

Order-Management-Administrator試験資料の更新は1年以内に無料で提供され、1年後にクライアントは50%の割引を受けることができます。古いクライアントは、Order-Management-AdministratorのSalesforce試験トレントを購入すると、特定の割引を利用できます。当社の専門家は、テストバンクの更新が毎日あるかどうかを確認し、Order-Management-Administrator学習ガイドの最新版がある場合、システムはそれを自動的にクライアントに送信します。それが、Order-Management-Administrator学習教材が非常に人気がある理由の1つであり、お客様により有利な価格とより多くのサービスを提供しています。

Salesforce Order-Management-Administrator 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"> Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.
トピック 2	<ul style="list-style-type: none"> Order Management Basics: In this topic, the Salesforce Order Management Administrator Consultant learns to position Order Management effectively within Salesforce's core architecture. By articulating the extensible platform capabilities, the ability to integrate with third-party systems, and the overall value proposition, this knowledge helps highlight Order Management's seamless adaptability and efficiency. These insights are crucial for demonstrating business value during client engagements.
トピック 3	<ul style="list-style-type: none"> Process Automation and Integrations: This section helps the Salesforce Order Management Administrator Consultant demonstrate the capability to deliver business value by integrating Order Management with external systems using clicks rather than code. Mastery of navigation within Order Management processes, connecting nodes, and integrating systems efficiently ensures understanding of how to implement effective solutions.

Salesforce Order Management Administrator Accredited Professional 認定 Order-Management-Administrator 試験問題 (Q110-Q115):

質問 # 110

A company's Salesforce org has high-scale orders enabled. During a flash sale, a customer service representative needs to service an order but it shows as a Pending Order Summary in Salesforce.

What should the customer service representative do?

- A. Manually create the Order Summary record
- B. Use the Create Order Summary action on the Order records actions menu
- C. Import the Order from the associated Account page
- D. The customer service representative has to wait until the Order Summary is created

正解: D

解説:

The best thing for the customer service representative to do in this situation is to wait until the Order Summary is created. An Order Summary is a record that represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary is created after an order is ingested into Order Management, and it triggers various flows and processes for order fulfillment and payment processing. A Pending Order Summary is a temporary record that indicates that an order has been received but not yet processed by Order Management. A customer service representative cannot service an order until it has an Order Summary record. 質問 # 111

A company has an external system that stores client accounting data but they want to be able to search for this data within Salesforce. What three steps should the administrator take to implement this functionality?

- A. Create an External Data Source pointing to the external system's database
- B. Create an External Object for each table of accounting data in the external system
- C. Create an automated data capture (or the external system)
- D. Create an automated import of the external data using the Job Scheduler
- E. Create an Indirect Lookup field to connect to the Account

正解: A、B、E

解説:

Three steps that the administrator should take to implement this functionality are:

Create an External Data Source pointing to the external system's database. An External Data Source is a type of metadata that

defines the connection and authentication information for an external system that stores data outside of Salesforce. The administrator can create an External Data Source using the Lightning Connect OData 2.0 or 4.0 adapters, which support read-only access to data in relational databases.

Create an External Object for each table of accounting data in the external system. An External Object is a type of custom object that maps to a table in an external system. The administrator can create an External Object for each table of accounting data that they want to access from Salesforce, and define its fields and relationships accordingly.

Create an Indirect Lookup field to connect to the Account. An Indirect Lookup field is a type of custom field that links a child External Object record to a parent standard or custom object record. The administrator can create an Indirect Lookup field on the External Object that references the Account object, and specify the external column name and value that match the Account ID.

質問 # 112

The order object represents which two statements? (Choose 2)

- A. The invoice data for accounting purposes
- B. An overall summary of the order being processed
- C. The customer's intent at the time of purchase
- D. The initial exchange of funds for goods or services

正解: C、D

質問 # 113

A developer needs to create a scheduled job in an external system to move Order data into a Salesforce org every 24 hours. In which two ways can this off-platform job be established without additional third-party tools?

- A. Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data
- B. Set up an SFTP server as a waystation. drop the files there using the off-platform job and schedule a job in-platform to process the file
- C. Create a job in the org (on-platform) to drop a file of existing data. Use the off-platform machine to generate a file and identify the details between the two. Push the changes to the org's "Import" directory
- D. Authorize a machine against the Salesforce org's APIs with appropriate security measures and create a script to call the APIs

正解: A、D

解説:

Two ways that this off-platform job can be established without additional third-party tools are:

Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data. The CLI is a tool that allows developers to interact with Salesforce from the command line. The developer can use the CLI to create scripts that use commands such as `force:data:bulk:upsert` or `force:data:tree:import` to import data from CSV or JSON files into Salesforce.

Authorize a machine against the Salesforce org's APIs with appropriate security measures and create a script to call the APIs. The APIs are interfaces that allow developers to access data and functionality in Salesforce from external systems. The developer can use the APIs, such as REST API or Bulk API, to create a script that authenticates with Salesforce using OAuth 2.0 or JWT, and then performs operations such as insert, update, or delete on Order data.
