The Open Group OGBA-101시험준비, OGBA-101최고품질 인증시험자료

The Open Group OGBA-101덤프의 유효성을 보장해드릴수 있도록 저희 기술팀은 오랜시간동안The Open Group

OGBA-101 시험에 대하여 분석하고 연구해 왔습니다. The Open Group OGBA-101 덤프를 한번 믿고 The Open Group OGBA-101 시험에 두려움없이 맞서보세요. 만족할수 있는 좋은 성적을 얻게 될것입니다.

최신 TOGAF Business Architecture Foundation OGBA-101 무료 샘플문제 (Q114-Q119):

질문 # 114

Consider the following statements:

Groups of countries, governments, or governmental organizations (such as militaries) working together to create common or shareable deliverables or infrastructures Partnerships and alliances of businesses working together, such as a consortium or supply chain What are those examples of according to the TOGAF Standard?

- A. Organizations
- B. Architectures Scopes
- C. Business Units
- D. Enterprises

정답: D

설명:

TOGAF defines an "Enterprise" as any collection of organizations or alliances working toward shared goals, such as in consortiums or partnerships. This scope allows the architecture to address cross-organization processes and infrastructures for collaborative endeavors.

Reference:

TOGAF defines an Enterprise as any collection of organizations that has a common set of goals. This definition is intentionally broad and can encompass various types of entities, including:

Single organizations: A traditional company or corporation with a unified structure and goals.

Groups of organizations: This could include:

Public sector: Government agencies, military branches, or international collaborations like the United Nations.

Private sector: Consortiums, industry alliances, supply chains, or joint ventures where multiple businesses work together towards shared objectives.

The key characteristic of an enterprise is the shared set of goals that drives its activities and architecture.

질문 # 115

Which of the following best describes information mapping?

- A. A technique to represent business information assets in use, or planned by the enterprise.
- B. A technique to construct a high level description of the informational requirements of a business.
- C. A technique to construct a baseline description of the structure and interaction of information assets that support key business functions.
- D. A technique to create a maturity model for information management.

정답: A

설명:

Information mapping in TOGAF is a technique used to represent business information assets that are either currently in use or planned for future use by the enterprise. Here's a detailed explanation:

Purpose of Information Mapping:

Information mapping provides a clear visualization of how information flows within the enterprise, highlighting the information assets and their interactions. This is crucial for understanding the current state and planning the future state of information management.

TOGAF Framework:

Phase C: Information Systems Architectures: Within this phase, information mapping is used to develop the Data Architecture, which outlines the structure of an organization's logical and physical data assets and data management resources.

Supporting Analysis: Information mapping supports various analyses, including gap analysis, impact analysis, and the identification of information dependencies and redundancies.

Benefits:

Clear Representation: It provides a clear and structured representation of business information assets, aiding in the understanding and management of information flows.

Alignment with Business Processes: Helps ensure that information assets are aligned with business processes and objectives, enhancing the efficiency and effectiveness of information usage.

Components:

Current Information Assets: Information mapping identifies and catalogs the information assets currently in use within the enterprise.

Planned Information Assets: It also includes planned information assets that will be needed to support future business processes and strategies.

In summary, information mapping is a technique to represent business information assets in use or planned by the enterprise, providing a structured view of information flows and supporting effective information management.

질문 # 116

Complete the sentence. The TOGAF standard covers the development of four architecture domains. Business, Data, Technology and _____.

- A. Segment
- **B. Application**
- C. Capability
- D. Transition

정답: B

설명:

The TOGAF standard covers the development of four architecture domains: Business, Data, Technology, and Application. The Application Architecture domain defines the applications required to process the data and support the business functions.

The TOGAF standard describes the development of four architecture domains, which are considered its pillars. These are Business, Data, Technology, and Application. The Application Architecture domain provides a blueprint for the individual application systems to be deployed, their interactions, and their relationships to the core business processes of the organization.

질문 # 117

Consider the following extract of a model showing relationships between Business Architecture concepts:

□ What is the relationship labeled X?

- A. Enables
- B. Receives
- C. Creates
- **D. Consists of**

정답: D

설명:

In the context of TOGAF and Business Architecture, the diagram depicts the relationship between a Value Stream, Value Stage, and Value.

* Value Stream: Represents the end-to-end set of activities that create and deliver value to a stakeholder.

* Value Stage: A distinct step or phase within the Value Stream.

* Value: The benefit delivered to the stakeholder.

The relationship "X" indicates that a Value Stream is composed of multiple Value Stages.

Think of it like a journey (Value Stream) with multiple stops along the way (Value Stages). Each stage contributes to the overall value delivered at the end of the journey.

질문 # 118

Consider the following:

In Phase A a business capability map and a core set of value streams were created while developing the Architecture Vision.

Why would such Architecture Descriptions need to be updated in Phase B?

- A. A new value stream was assessed as in the project scope.
- **B. The development of Business Architecture Descriptions is always iterative.**
- C. Phase B is an ADM Architecture Development phase.
- D. Phase B requires that all Architecture Descriptions be updated.

정답: B

설명:

The development of Business Architecture Descriptions is always iterative because it involves constant refinement and validation of the architecture models and views based on stakeholder feedback and changing requirements. Therefore, any Architecture Description that was created in Phase A may need to be updated in Phase B as new information or insights emerge. Phase B does not require that all Architecture Descriptions be updated, only those that are relevant and necessary for the Business Architecture. Phase B is an ADM Architecture Development phase, but that does not explain why Architecture Descriptions need to be updated. A new value stream may or may not require updating existing Architecture Descriptions depending on its scope and impact. In TOGAF's ADM, the development of architecture is an iterative process. During Phase A, initial business capability maps and value streams are created to establish the Architecture Vision. However, as stakeholders provide more detailed inputs and requirements are refined, it is necessary to update the Architecture Descriptions. This is an iterative process that continues into Phase B, Business Architecture, where these descriptions are further developed and refined.
