SPLK-3002 Latest Exam Notes - Latest SPLK-3002 Dumps

2026 Latest Pass4sures SPLK-3002 PDF Dumps and SPLK-3002 Exam Engine Free Share: https://drive.google.com/open?id=1BCFoU7G-Teiz4B7QTJXh6lnQzj1HOD_G

In fact, on one side, our SPLK-3002 training braidumps can help you pass the exam and win the certification. On the othe side, i think it is even more important, that you can apply what you have learned on our SPLK-3002 Practice Guide into practices. Your speed of finishing the task will be greatly elevated. Everting will take positive changes because of our SPLK-3002 exam materials. Please cheer up for yourself.

Splunk SPLK-3002 certification exam is a valuable credential for IT professionals who want to demonstrate their expertise in using Splunk ITSI to monitor, analyze, and troubleshoot complex IT environments. By passing SPLK-3002 Exam, candidates can enhance their career opportunities and increase their earning potential.

Top Three Types of Pass4sures SPLK-3002 Practice Test

Pass4sures has come up with real Splunk SPLK-3002 Dumps for students so they can pass Splunk IT Service Intelligence Certified Admin (SPLK-3002) exam in a single try and get to their destination. Pass4sures has made this study material after consulting with the professionals and getting their positive feedback. A lot of students have used our product and prepared successfully for the test.

Splunk SPLK-3002 Exam is a multiple-choice exam consisting of 60 questions, and candidates have 90 minutes to complete it. The passing score for the exam is 70%, and the exam fee is $200 USD. Candidates can take the exam online or in-person at a Pearson VUE testing center. Splunk offers a range of training courses and resources to help candidates prepare for the exam, including online courses, instructor-led training, and practice exams.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q91-Q96):

NEW QUESTION # 91
What is an episode?

- A. A deep dive.
- B. A workflow task.
- C. A notable event group.
- D. A notable event.

Answer: D

Explanation:
Explanation

It's a deduplicated group of notable events occurring as part of a larger sequence, or an incident or period considered in isolation.

NEW QUESTION # 92
Which step is required to install ITSI on a single Search Head?

- A. All of the above.
- B. Run splunk_apply shcluster-bundle
- C. Use the Splunk -> Manage Apps Dashboard to download and install.
- D. Untar the ITSI package in <splunk home>/etc/apps

Answer: C

Explanation:
To install Splunk IT Service Intelligence (ITSI) on a single Search Head, one of the straightforward methods is to use the Splunk Web interface, specifically the "Manage Apps" dashboard, to download and install ITSI.
This method is user-friendly and does not require manual file handling or command-line operations. By navigating to "Manage Apps" in the Splunk Web interface, users can find ITSI in the app repository or upload the ITSI installation package if it has been downloaded previously. From there, the installation process is initiated through the Splunk Web interface, simplifying the setup process. This approach ensures that the installation follows Splunk's standard app installation procedures, helping to avoid common installation errors and ensuring that ITSI is correctly integrated into the Splunk environment.

NEW QUESTION # 93
Which of the following items apply to anomaly detection? (Choose all that apply.)

- A. Anomaly detection automatically generates notable events when KPI data diverges from the pattern.
- B. There are 3 types of anomaly detection supported in ITSI: adhoc, trending, and cohesive.
- C. A minimum of 24 hours of data is needed for anomaly detection, and a minimum of 4 entities for cohesive analysis.
- D. Use AD on KPIs that have an unestablished baseline of data points. This allows the ML pattern to perform it's magic.

Answer: A,C

Explanation:
Reference:
Anomaly detection is a feature of ITSI that uses machine learning to detect when KPI data deviates from a normal pattern. The following items apply to anomaly detection:
B) A minimum of 24 hours of data is needed for anomaly detection, and a minimum of 4 entities for cohesive analysis. This ensures that there is enough data to establish a baseline pattern and compare different entities within a service.
C) Anomaly detection automatically generates notable events when KPI data diverges from the pattern. You can configure the sensitivity and severity of the anomaly detection alerts and assign them to episodes or teams. Reference: [Anomaly Detection]

NEW QUESTION # 94
What should be considered when onboarding data into a Splunk index, assuming that ITSI will need to use this data?

- A. Plan to build as many data models as possible for ITSI to leverage
- B. Make sure that all fields conform to CIM, then use the corresponding module to import related services.
- C. Check if the data could leverage pre-built KPIs from modules, then use the correct TA to onboard the data.
- D. Use | stats functions in custom fields to prepare the data for KPI calculations.

Answer: C

Explanation:
Reference:
When onboarding data into a Splunk index, assuming that ITSI will need to use this data, you should consider the following:
B) Check if the data could leverage pre-built KPIs from modules, then use the correct TA to onboard the data. This is true because modules are pre-packaged sets of services, KPIs, and dashboards that are designed for specific types of data sources, such as operating systems, databases, web servers, and so on. Modules help you quickly set up and monitor your IT services using best practices and industry standards. To use modules, you need to install and configure the correct technical add-ons (TAs) that extract and normalize the data fields required by the modules.

The other options are not things you should consider because:
A) Use | stats functions in custom fields to prepare the data for KPI calculations. This is not true because using | stats functions in custom fields can cause performance issues and inaccurate results when calculating KPIs. You should use | stats functions only in base searches or ad hoc searches, not in custom fields.
C) Make sure that all fields conform to CIM, then use the corresponding module to import related services. This is not true because not all modules require CIM-compliant data sources. Some modules have their own data models and field extractions that are specific to their data sources. You should check the documentation of each module to see what data requirements and dependencies they have.
D) Plan to build as many data models as possible for ITSI to leverage. This is not true because building too many data models can cause performance issues and resource consumption in your Splunk environment. You should only build data models that are necessary and relevant for your ITSI use cases.

NEW QUESTION # 95
Which of the following are characteristics of service templates? (select all that apply)

- A. Service templates contain KPIs and KPI thresholds.
- B. Service templates contain domain specific dashboards and deep dives.
- C. Service templates can contain specific or generic entity rules.
- D. Service templates can be modified after services are instantiated from it.

Answer: A,C

Explanation:
Service templates in Splunk IT Service Intelligence (ITSI) are designed to streamline the creation of services by providing pre-defined configurations:
B) Service templates contain KPIs and KPI thresholds: This allows for the standardized deployment of services with predefined performance indicators and their associated thresholds, ensuring consistency across similar services.
C) Service templates can contain specific or generic entity rules: These rules define how entities are associated with services created from the template, allowing for both broad and targeted applicability.
While service templates contain configurations for KPIs, thresholds, and entity rules, the ability to modify templates after services have been instantiated from them is limited. Changes to a template do not retroactively affect services already created from that template. Moreover, service templates do not inherently contain domain-specific dashboards or deep dives; these are created separately within ITSI.
