We even guarantee our users that if they couldn't pass the Salesforce Identity-and-Access-Management-Architect Certification Exam on the first try with their efforts, they can claim a full refund of their payment from us (terms and conditions apply).

## Salesforce Certified Identity and Access Management Architect Sample Questions (Q34-Q39):

### NEW QUESTION # 34

Which two things should be done to ensure end users can only use single sign-on (SSO) to login in to Salesforce?  
Choose 2 answers

- A. Assign user "is Single Sign-on Enabled" permission via profile or permission set.
- B. Enable My Domain and select "Prevent login from https://login.salesforce.com".
- C. Request Salesforce Support to enable delegated authentication.
- D. Once SSO is enabled, users are only able to login using Salesforce credentials.

**Answer: A,B**

### NEW QUESTION # 35

customer service representatives at Universal containers (UC) are complaining that whenever they click on links to case records and are asked to login with SAML SSO, they are being redirected to the salesforce home tab and not the specific case record. What item should an architect advise the identity team at UC to investigate first?

- A. The salesforce SSO settings are using http post
- B. My domain is configured and active within salesforce.
- C. The users have the correct Federation ID within salesforce.
- D. The identity provider is correctly preserving the Relay state

**Answer: D**

### NEW QUESTION # 36

Northern Trail Outfitters (NTO) uses the Customer 360 Platform implemented on Salesforce Experience Cloud. The development team in charge has learned of a contactless user feature, which can reduce the overhead of managing customers and partners by creating users without contact information.

What is the potential impact to the architecture if NTO decides to implement this feature?

- A. Contactless user feature is available only with the External Identity license, which can restrict the ExperienceCloud functionality available to the user.
- B. Custom registration handler is needed to correctly assign External Identity or Community license for the newly registered contactless user.
- C. If contactless user is upgraded to Community license, the contact record is automatically created and linked to the user record, but not associated with an Account.
- D. Passwordless authentication cannot be supported because the mobile phone receiving one-time password (OTP) needs to match the number on the contact record.

**Answer: C**

Explanation:

According to the Salesforce documentation<sup>3</sup>, contactless user feature allows creating users without contact information, such as email address or phone number. This reduces the overhead of managing customers and partners who don't need or want to provide their contact information. However, if a contactless user is upgraded to a Community license, a contact record is automatically created and linked to the user record, but not associated with an account. This can impact the architecture of NTO's Customer 360 Platform, as they may need to associate contacts with accounts for reporting or other purposes.

### NEW QUESTION # 37

A public sector agency is setting up an identity solution for its citizens using a Community built on Experience Cloud and requires the new user registration functionality to capture first name, last name, and phone number. The phone number will be used for passwordless login.

Which feature should an identity architect recommend to meet the requirements?

- A. Create a custom Lightning Web Component
- **B. Use Login Discovery**
- C. Integrate with social websites (Facebook, LinkedIn, Twitter)
- D. Use an external Identity Provider

**Answer: B**

Explanation:

Login Discovery is the Salesforce feature built for identifier-first sign-in experiences that start with an email address or phone number and then route the user into the next authentication step. It is especially relevant for passwordless designs because the user can enter an email address or mobile number and then receive a verification code through the configured handler and verification service. That matches the stated requirement much more closely than social sign-on or a generic external IdP recommendation. The key platform point is that Login Discovery separates "who are you?" from "how do we authenticate you?" and allows Salesforce to branch appropriately. For citizen or customer portals, it is the standard entry point for phone-or-email-based identification before code verification. This is why option B is the best answer in Salesforce terms.

### NEW QUESTION # 38

Universal Containers (UC) uses Active Directory (AD) as their identity store for employees and must continue to do so for network access. UC is undergoing a major transformation program and moving all of their enterprise applications to cloud platforms including Salesforce, Workday, and SAP HANA. UC needs to implement an SSO solution for accessing all of the third-party cloud applications and the CIO is inclined to use Salesforce for all of their identity and access management needs.

Which two Salesforce license types does UC need for its employees'

Choose 2 answers

- A. Company Community and Identity licenses
- **B. Identity and Identity Connect licenses**
- C. Chatter Only and Identity licenses
- **D. Salesforce and Identity Connect licenses**

**Answer: B,D**

Explanation:

Explanation

The two Salesforce license types that UC needs for its employees are Identity and Identity Connect licenses.

According to the Salesforce documentation, "Identity licenses let your employees access any app that supports standards-based single sign-on (SSO). Identity Connect licenses let you integrate your Active Directory with Salesforce." Therefore, option B and D are the correct answers. References: [Identity Licenses]

### NEW QUESTION # 39

.....

There is always a fear of losing the Identity-and-Access-Management-Architect exam and this causes you may loss your money and waste the time.
