

Reliable Analytics-Con-301 Exam Simulator | High Pass-Rate Analytics-Con-301: Salesforce Certified Tableau Consultant 100% Pass

P.S. Free & New Analytics-Con-301 dumps are available on Google Drive shared by VerifiedDumps:
<https://drive.google.com/open?id=1TzXGIZ8PPcStMB1FKXFgTby9SRReMnHz>

You just need to get VerifiedDumps's Salesforce Certification Analytics-Con-301 Exam exercises and answers to do simulation test, you can pass the Salesforce certification Analytics-Con-301 exam successfully. If you have a Salesforce Analytics-Con-301 the authentication certificate, your professional level will be higher than many people, and you can get a good opportunity of promoting job. Add VerifiedDumps's products to cart right now! VerifiedDumps can provide you with 24 hours online customer service.

It is impossible for everyone to concentrate on one thing for a long time, because as time goes by, people's attention will gradually decrease. Our Analytics-Con-301 study materials can teach users how to arrange their time. Experimental results show that we can only for a period of time to keep the spirit high concentration, in reaction to the phenomenon, our Analytics-Con-301 Study Materials are arranged for the user reasonable learning time, allow the user to try to avoid long time continuous use of our products, so that we can better let users in the most concentrated attention to efficient learning.

Analytics-Con-301 Latest Braindumps Free & New Analytics-Con-301 Test Cram

Although the Analytics-Con-301 exam prep is of great importance, you do not need to be over concerned about it. With scientific review and arrangement from professional experts as your backup, and the most accurate and high quality content of our Analytics-Con-301 Study Materials, you will cope with it like a piece of cake. So our Analytics-Con-301 learning questions will be your indispensable practice materials during your way to success.

Salesforce Certified Tableau Consultant Sample Questions (Q82-Q87):

NEW QUESTION # 82

A Tableau Cloud client has requested a custom dashboard to help track which data sources are used most frequently in dashboards across their site.

Which two actions should the client use to access the necessary metadata? Choose two.

- A. Query metadata through the GraphiQL engine.
- B. Connect directly to the Site Content data source within the Admin Insights project.
- C. Download metadata through Tableau Catalog.
- D. Access metadata through the Metadata API.

Answer: A,D

Explanation:

To track which data sources are used most frequently across a site in Tableau Cloud, the client should use the GraphiQL engine and the Metadata API. The GraphiQL engine allows for interactive exploration of the metadata, making it easier to construct and test queries¹. The Metadata API provides access to metadata and lineage of external assets used by the content published to Tableau Cloud, which is essential for tracking data source usage².

References: The actions are based on the capabilities of the GraphiQL engine and the Metadata API as described in Tableau's official documentation and learning resources^{3,2,1}.

NEW QUESTION # 83

A consultant is designing a dashboard that will be consumed on desktops, tablets, and phones. The consultant needs to implement a dashboard design that provides the best user experience across all the platforms.

Which approach should the consultant take to achieve these results?

- A. Build one dashboard and fix the size of the dashboard.
- B. Build one dashboard for each type of device and fix the size of the layouts.
- C. Build one dashboard and set the size to Automatic.
- **D. Build one dashboard that has desktop, tablet, and phone layouts, and fix the size of the layouts.**

Answer: D

Explanation:

For a consultant designing a dashboard to be consumed across multiple device types, the best approach is:

* Multi-device Layout: Tableau provides the capability to design device-specific layouts within a single dashboard. This feature allows the dashboard to adapt its layout to best fit the screen size and orientation of desktops, tablets, and phones.

* Fixed Size Layouts: By fixing the size of each layout, the consultant can ensure that the dashboard appears consistent and maintains the intended design elements and user experience across devices.

Fixed sizes prevent components from resizing in ways that could disrupt the dashboard's readability or functionality.

* Implementation: In Tableau, you can create these layouts by selecting 'Device Preview' and adding custom layouts for each device type. Here, you define the dimensions and the positioning of sheets and controls tailored to each device's typical viewing mode.

References

This approach leverages Tableau's device designer capabilities, which are specifically designed to optimize dashboards for multiple viewing environments, ensuring a seamless user experience regardless of the device used. This functionality is well documented in Tableau's official guides on creating and managing device-specific dashboards.

NEW QUESTION # 84

A client has a dashboard that uses a bar chart to visualize sales by Sub-Category and a detail table that has all the orders for the products within Sub- Category. The table has more than 10,000 rows of data and is slow to load.

A consultant plans to add an action so when the client interacts with the bar chart, only the relevant data appears in the table.

What will provide the fastest rendering of the dashboard?

- A. Add a highlight action and set Target Highlighting to Sub-Category.
- **B. Add a filter action, set "Run action on" to Select, and set "Clearing the selection will" to Exclude all values.**
- C. Add a filter action, set "Run action on" to Menu, and set "Clearing the selection will" to Show all values.
- D. Add a highlight action and set Target Highlighting to All Fields.

Answer: B

Explanation:

To optimize the dashboard rendering, particularly when dealing with a large dataset, a filter action is the most effective tool. Here's why the specified choice is optimal:

Add a filter action: This action creates a direct filter on the detail table based on the selection in the bar chart. It ensures that only data related to the selected sub-category is loaded into the table, significantly reducing load time and improving performance.

Set "Run action on" to Select: This setting means the filter action will be triggered as soon as the user selects a bar in the bar chart. Immediate activation of the filter ensures that the dashboard is interactive and responsive.

Set "Clearing the selection will" to Exclude all values: When the selection is cleared, this setting ensures that no data is shown, which avoids loading the entire dataset unnecessarily. This maintains performance when no sub-category is actively selected.

References

This strategy follows Tableau's performance best practices by using actions to limit the amount of data processed and rendered, as detailed in the Tableau User Guide and training materials on Dashboard Actions for optimizing large datasets.

NEW QUESTION # 85

SIMULATION

From the desktop, open the CC workbook. Use the US Population Estimates data source.

You need to shape the data in US Population Estimates by using Tableau Desktop. The data must be formatted as shown in the following table.

□ Open the Population worksheet. Enter the total number of records contained in the data set into the Total Records parameter. From the File menu in Tableau Desktop, click Save.

Answer:

Explanation:

See the complete Steps below in Explanation

Explanation:

To shape the data in the "US Population Estimates" data source and enter the total number of records into the "Total Records" parameter in Tableau Desktop, follow these steps:

Open the CC Workbook and Access the Worksheet:

From the desktop, double-click on the CC workbook to open it in Tableau Desktop.

Navigate to the Population worksheet by selecting its tab at the bottom of the window.

Format and Shape the Data:

Ensure the data types match those specified in the requirements: Sex, Origin, Race as strings; Year, Age, Population as whole numbers.

To verify or change the data type, click on the dropdown arrow next to each field name in the Data pane and select "Change Data Type" if necessary.

Calculate Total Number of Records:

Create a new calculated field named "Total Records". To do this, right-click in the Data pane and select "Create Calculated Field".

Enter the formula `COUNT([Record ID])` or `SUM([Number of Records])` depending on how the data source identifies each row uniquely.

Drag this new calculated field onto the worksheet to display the total number of records.

Enter the Value into the Total Records Parameter:

Locate the "Total Records" parameter in the Data pane. Right-click on the parameter and select "Edit".

Manually enter the number displayed from the calculated field into the parameter, ensuring accuracy to meet the data shaping requirement.

Save Your Changes:

From the File menu, click 'Save' to ensure all your changes are stored.

References:

Tableau Desktop Guide: Provides detailed instructions on managing data types, creating calculated fields, and updating parameters.

Tableau Data Shaping Techniques: Outlines effective methods for manipulating and structuring data for analysis.

This process will ensure the data in the "US Population Estimates" is accurately shaped according to the specified format and that the total number of records is correctly calculated and entered into the designated parameter. This thorough approach ensures data integrity and accuracy in reporting.

NEW QUESTION # 86

A client is using Tableau to visualize data by leveraging security token-based credentials. Suddenly, sales representatives in the field are reporting that they cannot access the necessary workbooks. The client cannot recreate the error from their offices, but they have seen screenshots from the field agents. The client wants to restore functionality for the field agents with minimal disruption.

Which step should the consultant recommend to accomplish the client's goal?

- A. Ensure that "Allow Refresh Access" was checked when the data source was published.
- **B. Renew the security token via the Data Connection on Tableau Server.**
- C. Ask the workbook owners to republish the workbooks to refresh the security token.
- D. Change the data source permissions for the connection to "Prompt User."

Answer: B

Explanation:

When field agents are unable to access workbooks due to issues with security token-based credentials, the most immediate and least disruptive solution is to renew the security token. This can be done through the Data Connection settings on Tableau Server. Renewing the token will restore access for the field agents without requiring them to take any action or affecting other users. References: The use of personal access tokens (PATs) in Tableau and the procedure for renewing them are documented in Tableau's official resources. It is noted that PATs are long-lived authentication tokens that can be revoked and renewed to manage access securely¹. Additionally, there have been discussions in the Tableau Community regarding issues with concurrent PAT access, which further supports the need to manage tokens effectively².

NEW QUESTION # 87

.....

You can avoid this mess by selecting a trusted brand such as Exams. To buy real Analytics-Con-301 Exam Dumps. The credible platform offers a product that is accessible in 3 formats: Salesforce Analytics-Con-301 Dumps PDF, desktop practice exam software, and a web-based practice test. Any applicant of the Analytics-Con-301 examination can choose from these preferable formats.
