Saviynt SAVIGA-C01 PDF Dumps Format - Your Key To Quick Exam Preparation

In order to meet all demands of all customers, our company has employed a lot of excellent experts and professors in the field to design and compile the SAVIGA-C01 test dump with a high quality. It has been a generally accepted fact that the SAVIGA-C01 exam reference guide from our company are more useful and helpful for all people who want to pass exam and gain the related exam. We believe this resulted from our constant practice, hard work and our strong team spirit. With the high class operation system, the SAVIGA-C01 study question from our company has won the common recognition from a lot of international customers for us. If you decide to buy our SAVIGA-C01 test dump, we can assure you that you will pass exam in the near future.

Saviynt SAVIGA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Access Reviews: This section focuses on the access review and certification processes in Saviynt IGA. It covers campaign management, reviewer workflows, and remediation procedures. Saviynt IGA Administrators should be able to set up and manage effective access review campaigns.
Topic 2	<ul style="list-style-type: none"> Implement IGA Solutions: This section focuses on the practical implementation of IGA solutions using Saviynt. It covers project planning, requirements gathering, and solution design. Saviynt IGA Administrators should be able to translate business needs into technical solutions.
Topic 3	<ul style="list-style-type: none"> Saviynt IGA Implementation: This section focuses on the implementation aspects of Saviynt IGA solutions. It covers deployment strategies, integration with existing systems, and customization techniques.
Topic 4	<ul style="list-style-type: none"> Deploy & Manage: This section measures the skills of exam-takers in deploying and managing Saviynt IGA solutions. It covers installation procedures, upgrades, and ongoing maintenance tasks.
Topic 5	<ul style="list-style-type: none"> Configure Common IGA Use-Cases: Saviynt IGA Administrators are expected to showcase their ability to configure common IGA use-cases in this final section. It covers scenarios such as joiner-mover-leaver processes, role-based access control, and privileged access management.
Topic 6	<ul style="list-style-type: none"> ARS: This section of the exam measures the skills of Saviynt IGA Administrators and covers the Access Request System (ARS) in Saviynt. It includes understanding the ARS workflow, configuring access requests, and managing approvals. Candidates should be able to set up and customize the ARS for different organizational needs. The exam assesses the ability to implement effective access request processes.
Topic 7	<ul style="list-style-type: none"> Identity Warehouse: Saviynt IGA Professionals are expected to showcase their understanding of the Identity Warehouse concept in this section. It covers data modeling, identity reconciliation, and data synchronization.
Topic 8	<ul style="list-style-type: none"> Architecture: Saviynt IGA Administrators are expected to understand the overall architecture of the Saviynt IGA platform in this section. It covers system components, integration points, and deployment models.
Topic 9	<ul style="list-style-type: none"> Analytics: Saviynt IGA Administrators are expected to demonstrate knowledge of analytics capabilities in the Saviynt IGA platform. This section covers reporting, dashboards, and data analysis techniques.
Topic 10	<ul style="list-style-type: none"> SoDs: Saviynt IGA Administrators are expected to demonstrate proficiency in Segregation of Duties (SoD) management. This section covers SoD rule creation, conflict detection, and mitigation strategies.

Saviynt IGA Certified Professional Exam (L100) Sample Questions (Q41-Q46):

NEW QUESTION # 41

The Sales department of a company requires an approval workflow to be created for an application where the Manager's approval should be followed by the Application Owner's approval. Which of the following sequences form the correct order of the workflow events?

- A. Start > Manager's Approval > Custom Assignment > Approve/Reject > End
- B. Start > Manager's Approval > Access Approval > Approve/Reject > End

- C. Start > Resource Owner's Approval > Manager's Approval > Approve/Reject > End
- **D. Start > Manager's Approval > Resource Owner's Approval > Approve/Reject > End**

Answer: D

Explanation:

The correct sequence of workflow events for an application where the Manager's approval should be followed by the Application Owner's approval is D. Start > Manager's Approval > Resource Owner's Approval > Approve/Reject > End. Here's a breakdown:

* Saviynt's Workflow Structure: Saviynt workflows follow a sequential structure, starting with a

"Start" event and ending with an "End" event.

* Workflow Activities: Each step in the workflow is represented by an activity, such as an approval task.

* Manager's Approval: In this scenario, the first required approval is from the Manager. This would be represented by a "TASK Access Approve" activity (or similar, depending on the specific configuration) assigned to the user's manager.

* Application Owner's Approval: After the Manager's approval, the workflow needs to proceed to the Application Owner for their approval. This would be another "TASK Access Approve" activity assigned to the Application Owner. In Saviynt terms, Application Owner is a type of Resource Owner.

* Approve/Reject: This activity represents the decision point where the final approver (in this case, the Application Owner) either approves or rejects the request.

* End: The workflow concludes with the "End" event, signifying the completion of the process.

* Other Options:

* A. Start > Resource Owner's Approval > Manager's Approval > Approve/Reject > End:

Incorrect order; the manager's approval should come before the application owner's.

* B. Start > Manager's Approval > Custom Assignment > Approve/Reject > End: "Custom Assignment" is not the most appropriate activity for a standard approval step. "TASK Access Approve" would be more suitable.

* C. Start > Manager's Approval > Access Approval > Approve/Reject > End: "Access Approval" is a bit redundant; "TASK Access Approve" assigned to the appropriate role is clearer.

In essence: The correct workflow sequence accurately reflects the required approval hierarchy: first the Manager, then the Application Owner, followed by the final decision (Approve/Reject) and the end of the workflow.

NEW QUESTION # 42

Which of the following Role types should be selected for a Role containing Entitlements that span across multiple applications?

- A. Enabler Role
- B. Application Role
- C. Transactional Role
- **D. Enterprise Role**

Answer: D

Explanation:

In Saviynt, Enterprise Roles are specifically designed to encompass entitlements that span multiple applications. This is in contrast to Application Roles, which are limited to entitlements within a single application.

* Enterprise Roles: Provide a way to group entitlements across different applications, reflecting a user's overall job function or responsibilities within the organization. This is essential for managing access for users who need permissions in various systems to perform their duties.

* Other Role Types:

* Application Role: Grants permissions specific to a single application.

* Transactional Role: Focuses on granting permissions for specific tasks or transactions within an application.

* Enabler Role: Provides supplementary permissions that enhance or support other roles.

Saviynt IGA References:

* Saviynt Documentation: The section on Role Management within Saviynt's documentation clearly defines the different role types and their purposes.

* Saviynt Training Materials: Saviynt's training courses emphasize the importance of Enterprise Roles in managing cross-application access.

NEW QUESTION # 43

Where can an Admin get the details of a successfully executed Rule?

- A. Archived Application Logs

- B. Action Trail
- C. Archived Rule Trail
- **D. Current Rule Trail**

Answer: D

Explanation:

To get the details of a successfully executed Rule in Saviynt, an Admin should look in the C. Current Rule Trail. Here's why:

- * Saviynt's Rule Engine and Logging: Saviynt's rule engine executes various types of rules (e.g., birthright rules, user update rules, technical rules). It maintains logs to track rule execution and outcomes.
- * Current Rule Trail: This log specifically captures the details of recently executed rules, including:
 - * Rule Name: The name of the rule that was executed.
 - * Execution Time: The timestamp of when the rule was executed.
 - * Status: Whether the rule execution was successful or not.
 - * Details: Specific information about the rule's execution, such as the conditions that were evaluated and the actions that were taken.
- * Troubleshooting and Auditing: The Current Rule Trail is invaluable for troubleshooting rule behavior and for auditing purposes, providing a clear record of what rules were executed and their results.
- * Other Options:
 - * A. Archived Rule Trail: This log stores details of older rule executions that have been archived. It's useful for historical analysis but not for recent executions.
 - * B. Archived Application Logs: These logs are related to application activity, not rule execution.
 - * D. Action Trail: The Action Trail captures general user and administrative actions within Saviynt, but it might not provide the detailed information about rule execution that the Current Rule Trail does.

NEW QUESTION # 44

Which of the following Application types can be associated with the Automated Provisioning configuration turned OFF?

- A. Connected Application
- **B. Disconnected Application**
- C. Service Desk Application
- D. Hybrid Application

Answer: B

Explanation:

Disconnected applications in Saviynt are those that do not have real-time integration with the platform for provisioning and de-provisioning users. Therefore, automated provisioning would be turned OFF for these types of applications.

* Disconnected Applications: These applications typically require manual intervention or custom scripts to manage user access. Saviynt can still manage entitlements and access requests for these applications, but it doesn't directly provision or de-provision accounts.

* Other Application Types:

- * Service Desk Application: Usually integrated with Saviynt for automated request fulfillment.
- * Hybrid Application: May have some level of automated provisioning, depending on the specific configuration.
- * Connected Application: Fully integrated with Saviynt for real-time, automated provisioning.

Saviynt IGA References:

* Saviynt Documentation: The section on Application Onboarding in Saviynt's documentation explains the different application types and their integration capabilities, including the concept of disconnected applications.

NEW QUESTION # 45

As an Admin, you are required to set up an Entitlement Owner Campaign for Entitlements belonging to an Oracle ERP Endpoint by the Internal Audit team. The Campaign should be launched at the beginning of every month, and only Accounts and Entitlements that meet the prerequisites should be included in the Campaign.

Which of the following 2-key configurations would you recommend for achieving this?

- A. Cannot be achieved
- **B. Use Campaign Template and the Schedule Later option**
- C. Use Advanced Configurations and Preview mode and create the Campaign at the beginning of each month
- D. Use Advanced Configurations and set the Campaign expiry to 31 days

Answer: B

Explanation:

To set up an Entitlement Owner Campaign for Entitlements belonging to an Oracle ERP Endpoint that launches at the beginning of every month, and includes only Accounts and Entitlements that meet the prerequisites, the 2-key configurations you should recommend are A. Use Campaign Template and the Schedule Later option. Here's a breakdown:

*** Campaign Template:**

*** Purpose:** Templates allow you to save a set of campaign configurations as a reusable template.

This is ideal for recurring campaigns with consistent settings.

*** Benefits:** Using a template saves time and ensures consistency across multiple campaign instances. You can define the scope (Oracle ERP Endpoint), Certifier type (Entitlement Owners), and other settings within the template.

*** Prerequisites:** You can include logic within the template to filter for Accounts and Entitlements that meet the defined prerequisites.

*** Schedule Later option:**

*** Purpose:** This option allows you to schedule the campaign to launch at a specific date and time in the future.

*** Recurring Scheduling:** You can configure the campaign to run on a recurring schedule, such as the beginning of every month.

*** Automation:** This automates the campaign launch process, eliminating the need for manual intervention each month.

*** Why Other Options Are Less Suitable:**

*** B. Use Advanced Configurations and Preview mode and create the Campaign at the beginning of each month:** This approach is manual and prone to errors. It doesn't leverage the automation benefits of templates and scheduling.

*** C. Use Advanced Configurations and set the Campaign expiry to 31 days:** While setting an expiry is important, it doesn't address the need for recurring monthly launches or using a template for consistent configuration.

*** D. Cannot be achieved:** This is incorrect; the scenario can be easily achieved using Campaign Templates and the Schedule Later option.

NEW QUESTION # 46

.....

I believe that people want to have good prospects of career whatever industry they work in. Of course, there is no exception in the competitive IT industry. IT Professionals working in the IT area also want to have good opportunities for promotion of job and salary. A lot of IT professional know that Saviynt Certification SAVIGA-C01 Exam can help you meet these aspirations. DumpsQuestion is a website which help you successfully pass Saviynt SAVIGA-C01.
