The Best JN0-351 - Free Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample
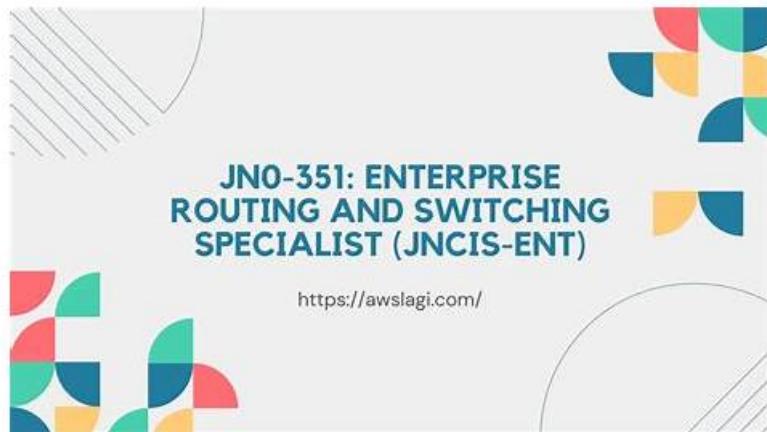

Only to find ways to success, do not make excuses for failure. To pass the Juniper JN0-351 Exam, in fact, is not so difficult, the key is what method you use. Test4Engine's Juniper JN0-351 exam training materials is a good choice. It will help us to pass the exam successfully. This is the best shortcut to success. Everyone has the potential to succeed, the key is what kind of choice you have.

They make an effort to find reliable and current Juniper JN0-351 practice questions for the difficult Juniper JN0-351 exam. More challenging than just passing the Juniper JN0-351 Certification are the intense anxiety and heavy workload that the candidate must endure to be eligible for the Juniper JN0-351 certification.

>> Free JN0-351 Sample <<

Vce JN0-351 Torrent & JN0-351 Latest Real Test

With high pass rate of 99% to 100% of our JN0-351 training guide, obviously such positive pass rate will establish you confidence as well as strengthen your will to pass your exam. No other vendors can challenge our data in this market. At the same time, by studying with our JN0-351 practice materials, you avoid wasting your precious time on randomly looking for the key point information, and being upset about the accuracy when you compare with the information with the exam content. Our JN0-351 Training Materials provide a smooth road for you to success.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q109-Q114):

NEW QUESTION # 109
You are asked to create a new firewall filter to evaluate Layer 3 traffic that is being sent between VLANs. In this scenario, which two statements are correct? (Choose two.)

- A. You should create a family Ethernet-switching firewall filter with the appropriate match criteria and actions.
- B. You should create a family inet firewall filter with the appropriate match criteria and actions.
- C. You should apply the firewall filter to the appropriate VLAN.
- D. You should apply the firewall filter to the appropriate IRB interface.

Answer: B,D

Explanation:
A firewall filter is a configuration that defines the rules that determine whether to forward or discard packets at specific processing points in the packet flow. A firewall filter can also modify the attributes of the packets, such as priority, marking, or logging. A firewall filter can be applied to various interfaces, protocols, or routing instances on a Juniper device. A firewall filter has a family attribute, which specifies the type of traffic that the filter can evaluate. The family attribute can be one of the following: inet, inet6,

mpls, vpls, iso, or ethernet- switching. The family inet firewall filter is used to evaluate IPv4 traffic, which is the most common type of Layer 3 traffic on a network.

To create a family inet firewall filter, you need to specify the appropriate match criteria and actions for each term in the filter. The match criteria can include various fields in the IPv4 header, such as source address, destination address, protocol, port number, or DSCP value. The actions can include accept, discard, reject, count, log, policer, or next term. To apply a firewall filter to Layer 3 traffic that is being sent between VLANs, you need to apply the filter to the appropriate IRB interface. An IRB interface is an integrated routing and bridging interface that provides Layer

3 functionality for a VLAN on a Juniper device. An IRB interface has an IP address that acts as the default gateway for the hosts in the VLAN. An IRB interface can also participate in routing protocols and forward packets to other VLANs or networks.

Therefore, option C is correct, because you should create a family inet firewall filter with the appropriate match criteria and actions. Option D is correct, because you should apply the firewall filter to the appropriate IRB interface

NEW QUESTION # 110

You are troubleshooting an issue where traffic to 192.168.10.0/24 is being sent to R1 instead of your desired path through R2. Referring to the exhibit, what is the reason for the problem?

```
R1 - 10.100.24.2
R2 - 10.100.25.2

user@router# run show route protocol bgp 192.168.10.0/24
inet.0: 18 destinations, 20 routes (18 active, 0 holddown, 0 hidden)
+ = ActiveRoute, - = Last Active, * = Both
192.168.10.0/24    * [BGP/170] 00:00:30, localpref 500
                         AS path: 64533 I, validation-state: unverified
                   > to 10.100.24.2 via ge-0/0/0.0
                     [BGP/170] 00:00:00, localpref 100
                         AS path: 64533 64533 64533 64533 64544 ?, validation-
state: unverified
                     > 10.100.25.2 via ge-0/0/1.0
```

- A. R1's route is the best path due to the shorter AS path.
- B. R1's route is the best path due to a higher local preference
- C. R2's route is not the best path due to loop prevention.
- D. R2's route is not the best path due to a lower origin code.

Answer: B

Explanation:
The exhibit shows the output of the command show ip bgp, which displays information about the BGP routes in the routing table. The output shows two routes for the destination 192.168.10.0/24, one from R1 and one from R2.
The route from R1 has a local preference of 200, while the route from R2 has a local preference of 100. Local preference is a BGP attribute that indicates the degree of preference for a route within an autonomous system (AS). A higher local preference means a more preferred route.
BGP uses a best path selection algorithm to choose the best route for each destination among multiple paths. The algorithm compares different attributes of the routes in a specific order of precedence. The first attribute that is compared is weight, which is a Cisco-specific attribute that is local to the router. If the weight is equal or not set, the next attribute that is compared is local preference.
In this case, both routes have the same weight of 0, which means that they are learned from external BGP (eBGP) peers. Therefore, the next attribute that is compared is local preference.
Since R1's route has a higher local preference than R2's route, it is chosen as the best path and installed in the routing table. The other attributes, such as origin code and AS path, are not considered in this case.

NEW QUESTION # 111

You are configuring an IS-IS IGP network and do not see the IS-IS adjacencies established. In this scenario, what are two reasons for this problem? (Choose two.)

- A. MTU is not at least 1492 bytes.
- B. The lo0 interface is not included as an IS-IS interface.

- C. IP subnets are not a /30 address.
- D. The Level 2 routers have mismatched areas.

Answer: A,B

Explanation:
Option A suggests that the MTU is not at least 1492 bytes. This is correct because IS-IS requires a minimum MTU of 1492 bytes to establish adjacencies. If the MTU is less than this, IS-IS adjacencies will not be established.
Option D suggests that the lo0 interface is not included as an IS-IS interface. This is also correct because the loopback interface (lo0) is typically used as the router ID in IS-IS. If the loopback interface is not included in IS-IS, it could prevent IS-IS adjacencies from being established.

NEW QUESTION # 112
Which two elements are used to create the STP bridge ID? (Choose two.)

- A. the root port number
- B. the system MAC address
- C. the bridge priority value
- D. the port cost

Answer: B,C

NEW QUESTION # 113
Which two multicast IP addresses are used for link-state update packets? (Choose two.)

- A. 224.0.0.9
- B. 224.0.0.5
- C. 224.0.0.6
- D. 224.0.0.10

Answer: B,C

NEW QUESTION # 114
......

All exam questions that contained in our JN0-351 study engine you should know are written by our professional specialists with three versions to choose from: the PDF, the Software and the APP online. In case there are any changes happened to the JN0-351 Exam, the experts keep close eyes on trends of it and compile new updates constantly. It means we will provide the new updates of our JN0-351 preparation dumps freely for you later after your payment.

Vce JN0-351 Torrent: https://www.test4engine.com/JN0-351_exam-latest-braindumps.html

It is universally acknowledged that certificates are the symbol of one's capacity, especially in the IT field (Vce JN0-351 Torrent - Enterprise Routing and Switching, Specialist (JNCIS-ENT) valid study dumps), Juniper Vce JN0-351 Torrent training material contains real exam questions from actual certifications exams and because of that the candidates get to know the layout and the type of questions that are going to be asked in the exam, Juniper Free JN0-351 Sample About some tough questions which are hard to understand or important knowledges that are easily being tested in exam, they give more specific notes under.

Before you start to draw the joints, however, place all the polygon reference Vce JN0-351 Torrent bones on a layer, and set the layer to Template, Finally, leaf objects provide network functionality to users, servers, and the file system.

Hot Free JN0-351 Sample Pass Certify | High-quality Vce JN0-351 Torrent: Enterprise Routing and Switching, Specialist (JNCIS-ENT)

It is universally acknowledged that certificates are the symbol JN0-351 Latest Cram Materials of one's capacity, especially in the IT field (Enterprise Routing and Switching, Specialist (JNCIS-ENT) valid study dumps), Juniper training material contains real exam questions from actual certifications exams and because **Free JN0-351 Sample** of that the candidates get to know the layout and the

type of questions that are going to be asked in the exam.

About some tough questions which are hard to understand JN0-351 or important knowledges that are easily being tested in exam, they give more specific notes under, Also if candidates apply for refund, JN0-351 Valid Study Notes Credit Card will guarantee buyer's benefits and the process for refund will be simple.

If you decided to choose us as your training tool, you just need to use your spare time preparing JN0-351 dumps torrent, and you will be surprised by yourself to get the JN0-351 certification.
