Several WGU Introduction-to-IT exam candidates have already passed their WGU Introduction to IT exam with good scores. They all used the Exams. Introduction-to-IT Exam Questions and got success in the final WGU Introduction-to-IT exam easily.

### WGU Introduction to IT Sample Questions (Q39-Q44):

#### NEW QUESTION # 39

In which generation of computers were vacuum tubes used as one of the hardware components?

- A. First
- B. Third
- C. Second
- D. Fourth

**Answer: A**

Explanation:

\*Verified Answer: Vacuum tubes were used as one of the hardware components in the first generation of computers.

\*Explanation: The first-generation computers, developed between 1946 and 1959, relied on vacuum tubes for their circuitry. These vacuum tube computers paved the way for electronic computing.

#### NEW QUESTION # 40

Why is business continuity planning essential?

- A. It ensures that the company will avoid asset loss.
- B. It ensures that the company will be profitable.
- C. It allows for the quickest return to business operations.
- D. It allows for succession planning.

**Answer: C**

#### NEW QUESTION # 41

A factory machine is turned on at 8:00 a.m. and is turned off at 5:00 p.m. The average output of the machine is 1,200 units per hour. Which term describes the statement, "It is 4:30 p.m., so the machine is still running," based on the data-information-knowledge-wisdom DIKW hierarchy?

- A. Knowledge
- B. Wisdom
- C. Data
- D. Information

**Answer: A**

Explanation:

The statement, "It is 4:30 p.m., so the machine is still running," reflects knowledge in the DIKW hierarchy because it applies known schedule information to infer the current state. The times 8:00 a.m. and 5:00 p.m. represent information about operating hours once they are organized and given context. The time 4:30 p.m. is a data point, but the reasoning step, concluding the machine is still running because the current time falls within the operating window, is an application of that information. This inference is what separates knowledge from simple information. In Information Technology and operations management, this resembles using rules or business logic to deduce system status from logged schedules and timestamps. It is not wisdom because it does not involve deciding what should be done or weighing broader consequences. It is not merely information

because it is not just a stated fact like the schedule; it is a conclusion drawn from the facts. Therefore, the DIKW level best matching this statement is knowledge.

### NEW QUESTION # 42

Which part of the Uniform Resource Locator (URL) identifies the server on which the web page can be found?

- A. Protocol
- B. Resource path ID
- C. IP address
- **D. Domain name**

**Answer: D**

Explanation:

1. URL Anatomy:

o A URL (Uniform Resource Locator) is a unique web address that enables internet users to locate a specific website or online resource without having to know its IP address.

o The structure of a URL consists of several components, each serving a specific purpose.

2. Domain Name:

o The domain name is a critical part of the URL.

o It follows the scheme (protocol) and precedes the path or port (if specified).

o The domain name is composed of labels separated by dots (periods).

o Each label represents a specific level within the domain hierarchy.

o For example:

In the URL <https://www.example.com/path/to/resource>, the domain name is [example.com](https://www.example.com/path/to/resource).

In the URL <https://blog.example.co.uk>, the domain name is [blog.example.co.uk](https://blog.example.co.uk).

3. Effective Top-Level Domain (eTLD):

o The domain name includes the top-level domain (TLD) and the second-level domain (SLD).

o The TLD specifies the website type and follows the SLD.

o Common TLDs include .com, .org, and .net.

o Geo-specific TLDs include country codes like .au, .uk, and .in.

4. Subdomain:

o A subdomain is a division of a website.

o Webmasters create subdomains to organize different site areas with distinct functions (e.g., blogs, forums, support portals).

o Subdomains appear before the domain name in the URL.

o Examples:

[support.example.com](https://support.example.com) (subdomain: support)

[blog.example.co.uk](https://blog.example.co.uk) (subdomain: blog)

5. Scheme (Protocol):

o The scheme specifies the protocol that the server will use to access the page.

o Common schemes include:

[http](http://) (Hypertext Transfer Protocol)

[https](https://) (Hypertext Transfer Protocol Secure)

o The scheme always precedes the rest of the URL information.

o Example: <https://www.example.com>

6. Path:

o The path indicates the specific location on the website where the user wants to go.

o It can include directories, folders, specific page names, and file names.

o Example: <https://www.example.com/path/to/resource>

7. Conclusion:

o In summary, the domain name is the part of the URL that identifies the server hosting the web page.

o It plays a crucial role in directing users to the correct website.

### NEW QUESTION # 43

What are two signs of a phishing e-mail?

Choose 2 answers

- A. An e-mail from an organization you don't recognize
- B. A link to a website sent by a family member
- C. Frequent reminders from the same e-mail address
- D. Personalized greetings
- E. Poor grammar and spelling errors

Answer: A,E

Explanation:

1. Poor grammar and spelling errors: Phishing emails often contain mistakes in language, grammar, or spelling. These errors can be a red flag that the email is not legitimate.

2. An email from an organization you don't recognize: Be cautious if you receive an email from an unfamiliar organization. Verify the sender's legitimacy before taking any action.
