Sharing-and-Visibility-Architect Schulungsmaterialien & Sharing-and-Visibility-Architect Dumps Prüfung & Sharing-and-Visibility-Architect

Studienguide

Wenn Sie finden, dass es ein Abenteuer ist, sich mit den Prüfungsmaterialien zur Salesforce Sharing-and-Visibility-Architect Zertifizierungsprüfung von ZertSoft auf die Prüfung vorzubereiten. Das ganze Leben ist ein Abenteuer. Diejenigen, die am weitesten gehen, sind meistens diejenigen, die Risiko tragen können. Die Prüfungsmaterialien zur Salesforce Sharing-and-Visibility-Architect Prüfung von ZertSoft werden von den Kandidaten durch Praxis bewährt. ZertSoft hat den Kandidaten Erfolg gebracht. Es ist wichtig, Traum und Hoffnung zu haben. Am wichtigsten ist es, den Fuß auf den Boden zu setzen. Wenn Sie ZertSoft wählen, können Sie sicher Erfolg erlangen.

Das Erreichen der Salesforce Certified Sharing and Visibility Architect-Zertifizierung ist ein bedeutender Meilenstein in der Karriere eines Salesforce-Profis. Es zeigt ein hohes Maß an Expertise in Salesforce-Sicherheits- und Sharing-Funktionen auf und wird von Arbeitgebern und Kollegen als Zeichen der Exzellenz anerkannt. Die Zertifizierung ist auch eine Voraussetzung für die Salesforce Certified Technical Architect-Zertifizierung, die höchste Zertifizierungsstufe im Salesforce-Ökosystem. Als solches ist es ein wesentlicher Schritt für Personen, die Salesforce Technical Architects werden möchten.

Salesforce Certified Sharing and Visibility Architect Sharing-and-Visibility-Architect Prüfungsfragen mit Lösungen (Q63-Q68):

63. Frage

Sales reps at Universal Containers sometimes create large files as a part of the sales process that are too large to share over email. They would like users to be able to share files with customers, but the CISO has requested that any file links shared must be password-protected.

How can this be accomplished?

- A. Utilize an AppExchange product for delivering password protected files to customers
- **B. Create a content delivery; during creation, the user should select the option to require 3 password to access content.**
- C. Set up an Experience Cloud site for customers to access files and share the file with customers via Chatter. Customers can then log in to the site to access the content.

Antwort: B

Begründung:

Content Delivery is a Salesforce feature designed for secure file sharing. When creating a content delivery, users can require a password for access, ensuring compliance with the CISO's requirement.

* Option A: While AppExchange products could provide similar functionality, Salesforce's native Content Delivery feature already meets the requirement without additional cost or complexity.

* Option B (Correct): Content Delivery allows the sharing of files via secure, password-protected links.

* Option C: Setting up an Experience Cloud site is an excessive and unnecessary solution for this simple file-sharing requirement.

Content Deliveries and Password Protection

64. Frage

Jane, a support representative at Universal Containers, created a report to view all her open cases that have been created in the past 7 days and saved the report in the "Private Reports" folder.

Who can view and run the report?

- **A. The report owner**
- B. The report owner and anybody in the role hierarchy above the report owner
- C. The report owner and users with the "View All Data" permission
- D. The report owner and any users who have been given access to the "My Private Reports" folder

Antwort: A

Begründung:

Explanation

The report owner is the only one who can view and run the report that is saved in the "Private Reports" folder.

Option A is incorrect, since there is no such thing as the "My Private Reports" folder in Salesforce. Option B is incorrect, since the role hierarchy does not affect the access to private reports. Option D is incorrect, since the "View All Data" permission does not grant access to private reports.

65. Frage

The Collections department at Universal Containers uses Salesforce to track its efforts. All Invoices and Invoice Line Items are stored in Salesforce. Invoice Line Item object details, such as Quantity and Extended Amount, should be summarized at the Invoice Object level, and all users who can see a given invoice should always see all invoice line items. Without leveraging Apex code, how should an Architect create the relationship between the Invoice object and the Invoice Line Item Object?

- A. The Invoice Line Item Object should have a Lookup to the Invoice Object
- B. The Invoice Object should have an inner join to the Invoice Line Item Object
- **C. The Invoice Line Item Object should have a Master-Detail to the Invoice Object**
- D. The Invoice object should have a Master-Detail to the Invoice Line Item Object

Antwort: C

Begründung:

Explanation

A master-detail relationship is a type of relationship between two objects where the master object controls certain behaviors of the detail object, such as security and deletion. In this case, the Invoice Line Item Object should have a master-detail relationship to the Invoice Object, so that:

The Invoice Line Item records are deleted when the parent Invoice record is deleted.

The Invoice Line Item records inherit the sharing and security settings of the parent Invoice record.

The Invoice Line Item fields can be rolled up to calculate sums, averages, etc. on the parent Invoice record.

66. Frage

What is the best practice for testing sharing and visibility changes?

- A. Use the Sharing button to test Profile and Permission set changes.
- **B. Use the Login As feature for a sample user in each role and profile.**
- C. Use Administrative and User reports to view the Active Users.
- D. Use Field Audit Trail to audit the field meta-data and visibility.

Antwort: B

67. Frage

Universal Containers (UC) delivers training and courses to students and companies. UC is implementing a Salesforce Customer Community for its students granting them a Customer Community license. As part of the community requirements, UC asked to give students access to cases that are related to their account in the UC community.

What is the optimum sharing technique to achieve these requirements?

- **A. Create a sharing set to share cases with the students.**
- B. Create a sharing rule to share cases with the students.
- C. Use Apex sharing to share cases with the students.

Antwort: A

Begründung:

For Customer Community licenses, the most optimal and Salesforce-recommended method to share cases with users is through a Sharing Set. Sharing Sets allow administrators to grant access to records associated with the user's account or contact, based on their profile and account relationship.

* Option A: Apex sharing could accomplish this, but it is unnecessary overhead and more complex compared to Sharing Sets, especially for straightforward account-related sharing.

* Option B: Sharing rules do not apply to community licenses such as Customer Community and are not an effective solution in this context.

* Option C (Correct): Sharing Sets provide a declarative solution to meet the requirement. By configuring a Sharing Set, UC can grant students access to cases linked to their account without needing custom code or complex configurations.
