NEW QUESTION # 95

To trace SIP messages exchanged during a Remote Worker registration in real-time, which Avaya Session Border Controller for Enterprise (ASBCE) CLI tool is used?

- **A. tracesbc**
- B. traceReg
- C. traceRW
- D. tracem

Answer: A

Explanation:

The tracesbc utility is the primary diagnostic and troubleshooting tool used on the Avaya Session Border Controller for Enterprise (ASBCE) command-line interface.

Real-Time Monitoring: When you run tracesbc from the CLI (after logging in as ipcs), it provides a real-time, scrolling view of all SIP signaling entering and leaving the SBC interfaces.

Remote Worker Tracking: Because Remote Worker registration involves a complex exchange of SIP REGISTER and SUBSCRIBE messages between the external client, the SBC, and the internal Session Manager, tracesbc is essential for verifying where a registration might be failing (e.g., a 401 Unauthorized loop or a timeout).

Ladder Diagrams: One of the most powerful features of tracesbc is its ability to generate a "ladder diagram" of a specific call or registration, showing exactly how the messages flow between the different IP interfaces (Internal vs. External).
