

# 2026 High-quality 100% Free NCP-MCI-7.5–100% Free Pdf Demo Download | Latest NCP-MCI-7.5 Exam Book

NCP-MCI Multicloud Infrastructure Certification Details	
Exam Code	NCP-MCI
Full Exam Name	Nutanix Certified Professional - Multicloud Infrastructure
No. of Questions	75
Online Practice Exam	<a href="#">Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) Practice Test</a>
Sample Questions	<a href="#">Nutanix NCP-MCI Sample Questions</a>
Passing Score	3000/1000-6000
Time Limit	120 minutes
Exam Fees	\$199 USD

Become successful with [VMExam.com](#)

With Prep4away, you can trust that you're accessing authentic and error-free NCP-MCI-7.5 exam practice questions. These questions are available in three different formats: PDF questions files, desktop practice test software, and web-based practice test software. All three formats contain genuine NCP-MCI-7.5 Practice Questions that will effectively prepare you for the final exam.

No matter how good the product is users will encounter some difficult problems in the process of use. Our NCP-MCI-7.5 real exam materials are not exceptional also, in order to enjoy the best product experience, as long as the user is in use process found any problem, can timely feedback to us, for the first time you check our NCP-MCI-7.5 Exam Question performance, professional maintenance staff to help users solve problems. Our NCP-MCI-7.5 learning reference files have a high efficient product maintenance team, and they can send the NCP-MCI-7.5 exam questions to you in a few minutes.

>> [NCP-MCI-7.5 Pdf Demo Download](#) <<

## Latest Nutanix NCP-MCI-7.5 Exam Book & NCP-MCI-7.5 Latest Test Materials

We have prepared our NCP-MCI-7.5 training materials for you. They are professional practice material under warranty. Accompanied with acceptable prices for your reference, all our materials with three versions are compiled by professional experts in this area more than ten years long. Moreover, there are a series of benefits for you. So the importance of NCP-MCI-7.5 Actual Test is needless to say. If you place your order right now, we will send you the free renewals lasting for one year. All those supplements are also valuable for your NCP-MCI-7.5 practice exam.

## Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Which service is part of Prism Central backup?

- A. Objects data
- **B. NCM Self-Service**
- C. LCM
- D. NUS

**Answer: B**

Explanation:

Nutanix documentation for Prism Central backup and restore repeatedly references NCM Self-Service as part of the Prism Central backup and recovery context. Nutanix specifically notes considerations for protecting and restoring NCM Self-Service-related entities when Prism Central is backed up and restored. That makes C the correct answer.

The other options do not fit the documented Prism Central backup scope in the same way. "Objects data" refers to data in the object store itself, not the platform service configuration protected as part of Prism Central backup workflows. LCM is a

management service, but Nutanix does not present it as the answer to this specific question. "NUS" is not the documented backup-scope answer here. Since Nutanix explicitly calls out NCM Self-Service in PC backup and restore considerations, C is the authentic choice.

#### NEW QUESTION # 37

An administrator needs to protect a set of workloads across three sites (Site A, Site B, Site C) managed by different Prism Central instances. Which is the most efficient way to protect such VMs?

- A. Create three different protection policies, one per Prism Central.
- **B. Create a single protection policy for all three sites from the source cluster.**
- C. Create two protection policies, one from site A to B and one from site A to C.
- D. Create a single protection policy from Site A and clone it to Site B and Site C.

**Answer: B**

Explanation:

Nutanix documentation for multisite disaster recovery states that a protection policy can include multiple replication schedules across up to three different recovery clusters, and Nutanix also documents the ability to configure multisite replication schedules for up to three recovery clusters with different schedules. That means a source site can protect workloads to multiple destinations without requiring separate, duplicated protection policies for each site. Given the options, the most efficient approach is therefore one protection policy from the source cluster covering all three sites, which is option D.

The answer choices that create multiple separate protection policies are less efficient and introduce avoidable administrative duplication. Cloning policies across sites also misses the point of Nutanix's native multisite capability. Even though the sites are managed by different Prism Central instances, Nutanix documents DR support between clusters registered to different Prism Central instances as well. So the most scalable and documentation-aligned answer is D.

#### NEW QUESTION # 38

An administrator has been asked to deploy a single-node Prism Central VM, with the possibility to scale out to increase its capacity. What is the minimum supported Prism Central size?

- A. Large
- B. X-Large
- C. X-Small
- **D. Small**

**Answer: D**

Explanation:

Nutanix documentation for Prism Central deployment states that single Prism Central VM deployments are supported in Small, Large, or X-Large sizes, and that a single-VM deployment can later be scaled out. Since X-Small is not the supported minimum deployment size in this documented model, the minimum supported size is Small. That makes A correct.

This question is really checking whether the administrator understands the starting point for a scale-out- capable Prism Central design. The existence of larger sizes does not change the minimum supported entry point. Nutanix's documentation is explicit that a single Prism Central VM can begin at Small and later be expanded if more scale or resiliency is needed. Therefore, for a single-node Prism Central deployment with future scale-out potential, the correct answer is Small.

#### NEW QUESTION # 39

An administrator is tasked with configuring asynchronous replication between two Availability Zones (AZs) using a Protection Policy.

Which requirement must be met to successfully configure asynchronous replication?

- A. Storage container name of the protected entities must be identical on primary and recovery clusters.
- B. Primary and recovery clusters must be running the same version of Prism Central.
- **C. Primary and recovery clusters must both be registered with a single Prism Central instance.**
- D. Round trip time (RTT) latency between the primary and recovery clusters must be less than 5 ms.

**Answer: C**

Explanation:

For Prism Central-based DR between on-prem Availability Zones, Nutanix documentation states that the clusters participating in the protection workflow must be registered with Prism Central. In the standard same- management-plane deployment model, the primary and recovery clusters need to be available to the Prism Central instance orchestrating the policy and recovery objects. That is why B is the expected exam answer for successfully configuring asynchronous replication with a protection policy in this scenario. ( Nutanix ) The other options reflect common misconceptions. Identical storage-container naming is not a mandatory prerequisite because Nutanix supports vStore mapping to map source and destination containers when names differ. The strict less than 5 ms RTT requirement is associated with synchronous-style designs such as Metro Availability, not ordinary asynchronous replication. Matching Prism Central versions is good practice but is not the core requirement expressed in the documented prerequisites. Since the protection policy workflow depends on managed registration within the Prism Central DR architecture, B is the best answer. ( Nutanix )

#### NEW QUESTION # 40

Due to user complaints of slow VM performance, an administrator is reviewing performance metrics on their Nutanix cluster and executes iostat on a Controller VM (CVM).

The following output is captured:

```
#TIMESTAMP 1768953673 : 01/21/2026 12:01:13 AM
avg-cpu: %user %nice %system %iowait %steal %idle
2.32 0.09 7.53 83.20 0.00 6.86
```

Based on this output, which statement most accurately describes the current state of the CVM?

- A. The CVM is experiencing significant CPU contention from the hypervisor, as indicated by the discrepancy between low user percentage and high system overhead.
- **B. The CVM is likely waiting on disk I/O operations to complete, suggesting a potential bottleneck in the storage subsystem or underlying physical drives.**
- C. The CVM is suffering from excessive network throughput congestion, resulting in a high percentage of CPU cycles being dedicated to interrupt processing.
- D. The CVM is under heavy computational load from Nutanix services, as evidenced by the high percentage of active processing cycles currently in use.

**Answer: B**

Explanation:

The decisive metric in the iostat output is %iowait = 83.20. In Linux performance interpretation, such a high iowait value means the CPU is spending most of its time waiting for disk I/O operations to complete rather than actively executing user or system work. On a Nutanix CVM, that strongly suggests the storage path is the bottleneck at that moment, whether due to backend disk saturation, contention, or broader storage subsystem latency. Since user CPU and steal are both low, the issue is not primarily compute pressure or hypervisor scheduling contention. Therefore, A is the most accurate description. ( Nutanix ) This is a classic Nutanix troubleshooting interpretation question. If the output had shown high %steal, then hypervisor contention would be a stronger candidate. If %system and %user were both very high, compute load from services would be more likely. But with the overwhelming majority of time in iowait, the signal points toward delayed storage completion. In operational terms, the next steps would usually involve checking CVM disk metrics, Stargate performance, storage latency, and possibly the health of the underlying drives. The evidence in the output supports a storage wait condition, which is exactly what option A says. ( Nutanix )

#### NEW QUESTION # 41

.....

The NCP-MCI-7.5 examination certification, as other world-renowned certification, will get international recognition and acceptance. People around the world prefer NCP-MCI-7.5 exam certification to make their careers more strengthened and successful. In Prep4away, you can choose the products which are suitable for your learning ability to learn.

**Latest NCP-MCI-7.5 Exam Book:** <https://www.prep4away.com/Nutanix-certification/braindumps.NCP-MCI-7.5.etc.file.html>

With constantly endeavor and dedicated spirits, they are doing their best to help IT candidates optimize their IT technology by providing convenient, high quality NCP-MCI NCP-MCI-7.5 exam dumps they can rely on, There are so many shining points of our NCP-MCI-7.5 certification training files, I will list a few of them for your reference, Nutanix NCP-MCI-7.5 Pdf Demo Download Everything is on the way of changing, but in different directions, negative or positive.

One of the key heartbeats of agile development involves NCP-MCI-7.5 the practice of daily stand-up meetings, Once the wires are

exposed, solder them to your antenna of choice.

With constantly endeavor and dedicated spirits, they are doing their best to help IT candidates optimize their IT technology by providing convenient, high quality NCP-MCI NCP-MCI-7.5 Exam Dumps they can rely on.

## **Hot NCP-MCI-7.5 Pdf Demo Download 100% Pass | Pass-Sure Latest NCP-MCI-7.5 Exam Book: Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5**

There are so many shining points of our NCP-MCI-7.5 certification training files, I will list a few of them for your reference, Everything is on the way of changing, but in different directions, negative or positive.

It is high time to prepare your NCP-MCI-7.5 actual test to improve yourself, It is time to refresh again.
