Quiz 2026 Useful Cybersecurity-Practitioner: Palo Alto Networks Cybersecurity Practitioner Valid Exam Questions

We promise during the process of installment and payment of our Cybersecurity-Practitioner prep torrent, the security of your computer or cellphone can be guaranteed, which means that you will be not afraid of virus intrusion and personal information leakage. Besides we have the right to protect your email address and not release your details to the 3rd parties.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q35-Q40):

NEW QUESTION # 35

A doctor receives an email about her upcoming holiday in France. When she clicks the URL website link in the email, the connection is blocked by her office firewall because it's a known malware website. Which type of attack includes a link to a malware website in

an email?

- A. spam
- B. whaling
- C. phishing
- D. pharming

Answer: C

Explanation:

Phishing is a type of attack that involves sending fraudulent emails that appear to be from legitimate sources, such as banks, companies, or individuals, in order to trick recipients into clicking on malicious links, opening malicious attachments, or providing sensitive information¹². The link to a malware website in the email is an example of a malicious link, which may lead to the installation of malware, ransomware, spyware, or other malicious software on the user's device, or the redirection to a fake website that mimics a legitimate one, where the user may be asked to enter their credentials, personal information, or financial details³⁴. Phishing emails often use social engineering techniques, such as creating a sense of urgency, curiosity, or fear, to persuade the user to click on the link or attachment, or to reply to the email⁵. Phishing emails may also spoof the sender's address, domain, or logo, to make them look more authentic and trustworthy⁶.

Whaling, pharming, and spam are not the correct answers for this question. Whaling is a specific type of phishing that targets high-profile individuals, such as executives, celebrities, or politicians, with the aim of stealing their confidential information or influencing their decisions⁷. Pharming is a type of attack that involves redirecting the user's web browser to a fake website, even if they enter the correct URL, by modifying the DNS server or the user's hosts file. Spam is the unsolicited or unwanted electronic messages, such as emails, texts, or instant messages, that are sent in bulk to a large number of recipients, usually for advertising, marketing, or scamming purposes. NEW QUESTION # 36

What type of address translation does a NAT perform?

- A. Public to private
- B. Private to public
- C. Physical to logical
- D. Logical to physical

Answer: B

Explanation:

NAT stands for Network Address Translation, which is a process that allows devices on a private network to communicate with devices on a public network, such as the Internet. NAT translates the private IP addresses of the devices on the private network to public IP addresses that can be routed on the public network. This way, multiple devices on the private network can share a single public IP address and access the Internet. NAT also provides security benefits, as it hides the internal network structure and IP addresses from the outside world. NEW QUESTION # 37

Which type of system is a user entity behavior analysis (UEBA) tool?

- A. Active monitoring
- B. Archiving
- C. sandboxing
- D. Correlating

Answer: A

Explanation:

A User Entity Behavior Analysis (UEBA) tool performs active monitoring by continuously analyzing the behavior of users and entities to detect anomalies that may indicate insider threats, compromised accounts, or malicious activity. It uses machine learning and analytics to identify unusual patterns in real time.

NEW QUESTION # 38

Which security component should you configure to block viruses not seen and blocked by the perimeter firewall?

- A. endpoint NIC ACLs
- B. strong endpoint passwords
- C. endpoint antivirus software
- D. endpoint disk encryption

Answer: C

Explanation:

Endpoint antivirus software is a type of software designed to help detect, prevent, and eliminate malware on devices, such as laptops, desktops, smartphones, and tablets. Endpoint antivirus software can block viruses that are not seen and blocked by the perimeter firewall, which is a network security device that monitors and controls incoming and outgoing network traffic based on predefined security rules. Perimeter firewall can block some known viruses, but it may not be able to detect and stop new or unknown viruses that use advanced techniques to evade detection. Endpoint antivirus software can provide an additional layer of protection by scanning the files and processes on the devices and using various methods, such as signatures, heuristics, behavior analysis, and cloud-based analysis, to identify and remove malicious code¹²³. NEW QUESTION # 39

Which of the following is an AWS serverless service?

- A. Kappa
- B. Beta
- C. Delta
- D. Lambda

Answer: D

Explanation:

Examples of serverless environments include Amazon Lambda and Azure Functions. Many PaaS offerings, such as Pivotal Cloud Foundry, also are effectively serverless even if they have not historically been marketed as such. Although serverless may appear to lack the container-specific, cloud native attribute, containers are extensively used in the underlying implementations, even if those implementations are not exposed to end users directly.

NEW QUESTION # 40

.....

The versions of our Cybersecurity-Practitioner study guide includes the PDF version, PC version, APP online version. Each version's using method and functions are different and the client can choose the most convenient version to learn our Cybersecurity-Practitioner exam materials. For example, the PDF version is convenient for you to download and print our Cybersecurity-Practitioner Test Questions and is suitable for browsing learning. If you use the PDF version you can print our Cybersecurity-Practitioner test torrent on the papers and it is convenient for you to take notes. You can learn our Cybersecurity-Practitioner test questions at any time and place.
