최신 ISC Certification CC 무료샘플문제 (Q209-Q214):

질문 # 209

In which phase of an incident response plan are incidents prioritized?

- A. Post-incident activity
- B. Containment, eradication, and recovery
- C. Preparation
- D. Detection and analysis

정답: D

설명:

During the detection and analysis phase, incidents are identified, triaged, categorized, and prioritized based on impact and urgency. This ensures resources are allocated appropriately.

질문 # 210

Which is the loopback address?

- A. 127.0.0.1
- B. 255.255.255.0
- C. Both A and B
- D. ::1

정답: C

설명:

The loopback address allows a system to test its own network stack. 127.0.0.1 is the IPv4 loopback address, while ::1 is its IPv6 equivalent. Both route traffic internally without leaving the host.

질문 # 211

A method for risk analysis that is based on the assignment of a descriptor such as low, medium, or high.

- A. Qualitative Risk Analysis
- B. Quantitative Risk Analysis
- C. Risk Mitigation
- D. Risk Assessment

정답: A

설명:

Qualitative risk analysis evaluates risk using descriptive categories such as low, medium, and high instead of numerical values. This approach relies on expert judgment, experience, and contextual understanding rather than precise financial or statistical calculations. According to NIST SP 800-30, qualitative analysis is especially useful when numerical data is unavailable or when rapid risk prioritization is required.

Unlike quantitative risk analysis, which assigns monetary values and probabilities, qualitative analysis focuses on relative severity and likelihood. It is commonly used during early stages of risk management, policy development, and executive decision-making. While less precise, qualitative risk analysis is easier to communicate to stakeholders and helps organizations focus resources on the most critical risks.

질문 # 212

What is the most important aspect of security awareness/training?

- A. Protecting health and human safety
- B. Ensuring the confidentiality of data
- C. Maximizing business capabilities
- D. Protecting assets

정답: A

질문 # 213

What is the primary purpose of a firewall?

- A. Backup critical data
- B. Monitor network traffic
- C. Prevent unauthorized access
- D. Encrypt data transmissions

정답: C

설명:

Firewalls control and filter network traffic based on security rules to prevent unauthorized access. While they may monitor traffic, their primary function is enforcing access control at network boundaries.

질문 # 214
