Just download the ACP-120 Questions and start Jira Cloud Administrator (ACP-120) exam preparation today.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q25-Q30):

NEW QUESTION # 25
You are setting up Jira Software Cloud for an organization of 250 employees. Product access is already configured to grant new users access to Jira Software by default You now need to configure site access so that it meets these 3 conditions
1. Minimum administration overhead is required
2. Access is granted to the entire organization at the same time
3. Access is restricted only to your organization
Which solution meets these requirements? (Choose one)

- A. Create an invite link and share it with all current and future employees
- B. Approve any domain in the site access settings
- C. Enable existing users to send invitations to all current and future employees
- D. Set the global mode to public and enable CAPTCHA on sign up
- E. Add all your company's domains as approved domains

Answer: E

NEW QUESTION # 26
You are the site and organization admin of a Jira Software and Confluence instance.
You are the only administrator and you don't have any Trusted users.
Users currently cannot send invitations to anyone. You need to control the number of licenses used.
Therefore, you want to either invite individual users or approve individual user requests.
Which site access setting will meet this requirement? (Choose one)

- A. Approve any domain
- B. Enable existing users to send invitations to anyone
- C. Approve your organization domain only
- D. Don't approve any domain
- E. Enable Jira Software and Confluence invite links

Answer: D

NEW QUESTION # 27
George is the project lead of several projects. Now, he needs to create projects but should not have Jira administrator privileges.
What does George need?

- A. Product role
- B. Project permission
- C. Global permission
- D. Project role
- E. Product access

Answer: C

Explanation:
To create projects in Jira Software Cloud without having full Jira administrator privileges, George needs a specificglobal permission, namely theCreate Projectspermission. This permission allows users to create new projects without granting them broader administrative access.
* Explanation of the Correct Answer (Option D):
* TheCreate Projectsglobal permission enables a user to create new projects in Jira. This permission is distinct from Jira administrator privileges, which include managing global settings like schemes, users, and workflows. By granting George this permission, he can create projects while maintaining a limited scope of authority.
* Exact Extract from Documentation:
Global permissions
Global permissions control access to system-wide actions in Jira. TheCreate Projectspermissionallows users to create new projects without requiring full Jira administrator privileges.
To grant this permission:
* Go toSettings > System > Global permissions.
* Add a user, group, or role to theCreate Projectspermission.Note: Users with this permission can create projects but cannot modify global configurations like schemes or user management unless they have additional permissions.(Source: Atlassian Support Documentation, "Manage global permissions")
* Why This Fits: TheCreate Projectsglobal permission directly addresses the requirement for George to create projects without needing Jira administrator privileges, making Option D the correct choice.
* Why Other Options Are Incorrect:
* Project role (Option A):
* Project roles (e.g., Administrator, Developer) are used within a project's permission scheme to grant project-specific permissions, such asAdminister ProjectsorBrowse Projects. They do not control the ability to create new projects, which is a system-level action.
* Extract from Documentation:
Project roles are used in permission schemes to grant permissions within a specific project. They do not apply to global actions like creating projects.
(Source: Atlassian Support Documentation, "Manage project roles")
* Product access (Option B):
* Product access determines whether a user can use Jira Software or other Atlassian products.
While George needs product access to use Jira, this does not grant the specific ability to create projects.
* Extract from Documentation:
Product access allows users to log in and use Jira products. Specific actions, like creating projects, require global or project permissions.
(Source: Atlassian Support Documentation, "Manage product access")
* Project permission (Option C):
* Project permissions (e.g.,Administer Projects,Browse Projects) are defined in a project's permission scheme and apply to actions within a specific project. Creating a project is a global action, not tied to any existing project's permission scheme.
* Extract from Documentation:
Project permissions control actions within a project, such as editing issues or managing components. Global permissions control system-wide actions like creating projects.
(Source: Atlassian Support Documentation, "Manage project permissions")
* Product role (Option E):
* Product roles (e.g., Jira Software User, Jira Service Management Agent) define access to specific Atlassian products but do not grant permissions for actions like creating projects.
This is not relevant to the requirement.
* Extract from Documentation:
Product roles determine access to Atlassian products and are not related to specific permissions like creating projects.
(Source: Atlassian Support Documentation, "Manage product roles")
* Additional Notes:
* TheCreate Projectspermission can be granted to George via a group or directly to his user account inSettings > System > Global permissions.
* As a project lead, George likely already has project-level permissions (e.g.,Administer Projects for his projects), but these do not extend to creating new projects.

NEW QUESTION # 28
Your administration project is configured as follows:
- there are three issue types that all share a single workflow
- all project users are members of the Project Users project role
- all members of the Administrators project role have the Set Issue Security permission
- project administrators are the only users who can create issues
You are tasked with replacing the Project Users project role with three distinct team project roles, each solely responsible for one of the issue types.
Which additional requirement can be met by individual workflows per issue type?

- A. Individual notifications should be sent out depending on the selected issue type.
- B. The system field Component/s needs to be required when creating two out of the three existing issue types.
- C. Only members of the dedicated teams should be able to view and work on the issues they are responsible for.
- D. The reporter and current assignee of each issue should always have access to view it.
- E. Each issue type needs a dedicated set of individual project components.

Answer: D

NEW QUESTION # 29
After a recent upgrade to your Jira system, one of the apps your organization depends on is not working reliably.
Which two methods can you use to debug and resolve this issue? (Choose two.)

- A. Ask the System Administrator to set the logging level to FATAL on all package names, Under Logging & Profiling.
- B. Ask the System Administrator to enable the SQL log.
- C. Ask the System Administrator for catalina.out logs and inspect for stack traces.
- D. Ask the System Administrator to add the app to the logger.
- E. Ask the System Administrator to set package com.atlassian to Trace logging level.

Answer: A,E
