## Slack-Dev-201 Valid Exam Cost | Slack-Dev-201 Reliable Test Tips

With the help of our Slack-Dev-201 Latest Dumps Pdf, you just need to spend one or two days to practice the Slack-Dev-201 training materials. If you remember the key points of study guide, you will pass the real exam with hit-rate. You can trust us about the valid and accuracy of Salesforce braindumps because it created by our experienced workers and based on the real questions.

## Salesforce Certified Slack Developer Sample Questions (Q186-Q191):

### NEW QUESTION # 186

You are developing a Slack app that uses OAuth tokens.  
How should you securely store these tokens to ensure the safety of user data?

- A. Store the tokens in a plaintext file within your app's source code repository
- **B. Encrypt the tokens and store them in a secure, access-controlled database**
- C. Keep the tokens in a public cloud storage for easy accessibility
- D. Email the tokens to your app's administrator for manual handling

**Answer: B**

Explanation:

Encrypt the tokens and store them in a secure, access-controlled database Encrypting OAuth tokens and storing them in a secure, access-controlled database is the safest method. This ensures that the tokens are protected and only accessible by authorized personnel, reducing the risk of unauthorized access.

Why not the other options:

\*Storing tokens in plaintext within source code repositories is highly insecure and exposes them to potential leaks or breaches.

- \*Storing sensitive tokens in public cloud storage without proper encryption and access controls can lead to security vulnerabilities.
- \*Emailing tokens can expose them to interception and is not a secure method of handling sensitive data.

### NEW QUESTION # 187

A Slack app is being developed for an HR team to collect employee feedback on workplace satisfaction. The feedback needs to be detailed and structured.

Which interactive component would be most suitable for this purpose?

- **A. Implement a modal with a form that includes various fields for detailed feedback**
- B. Use an interactive message with buttons for employees to select their satisfaction level
- C. Utilize a bot to ask questions and collect feedback via direct messages
- D. Create a dedicated channel where employees can post their feedback

**Answer: A**

Explanation:

Implement a modal with a form that includes various fields for detailed feedback A modal with a form is ideal for collecting structured and detailed feedback. It allows HR to design specific questions and fields that employees can fill out, providing comprehensive and organized feedback.

Why not the other options:

- \*Direct messages may not be as structured and could lack the formality and space needed for detailed feedback.
- \*A dedicated channel can lead to disorganized feedback and lack of privacy for employees.
- \*Interactive messages with buttons are more suited for quick, simple responses rather than detailed feedback.

### NEW QUESTION # 188

You are creating a Slack app for project management.

To align with Slack's principles of a pleasant and productive work environment, how should your app present project updates and notifications?

- A. Display comprehensive project updates every hour in the main channel
- B. Send individual direct messages to each team member with daily updates
- C. Use pop-up windows within Slack for real-time updates on every project change
- **D. Aggregate key updates and present them in a weekly digest format in a designated channel**

**Answer: D**

Explanation:

Aggregate key updates and present them in a weekly digest format in a designated channel Aggregating key updates and presenting them in a weekly digest in a designated channel balances the need for information with avoiding constant interruptions, thus maintaining a more pleasant and productive work environment.

Why not the other options:

- \*Providing comprehensive updates every hour can overwhelm users and clutter the main channel, disrupting productivity.
- \*Sending individual direct messages with daily updates can be intrusive and overwhelming for each team member.
- \*Using pop-up windows for real-time updates on every project change can be distracting and impede work flow.

### NEW QUESTION # 189

When designing a Slack app that interacts with external services, what is a key security consideration?

- A. Disable SSL/TLS to increase the speed of data transfer
- **B. Implement OAuth for secure authentication and authorization**
- C. Regularly change the app's API token and share it with all users
- D. Use simple authentication methods for ease of user access

**Answer: B**

Explanation:

Implement OAuth for secure authentication and authorization Implementing OAuth is a key security consideration for Slack apps interacting with external services. OAuth provides a secure and standardized way for authentication and authorization, ensuring that

user data is protected and access is controlled properly.

Why not the other options:

\*Using simple authentication methods can compromise security..

\*Regularly changing the API token and sharing it with users can lead to security risks and mismanagement.

\*Disabling SSL/TLS compromises data security in transit, making it vulnerable to interception and attacks.

### NEW QUESTION # 190

When is the SCIM API most appropriately used in managing a Slack workspace?

- A. To develop and deploy custom Slack bots for automated interactions within channels
- B. For analyzing the frequency and content of messages sent by users in the workspace
- C. When integrating Slack with a third-party identity management system for automated user provisioning and deprovisioning
- D. For customizing the user interface and themes of the Slack workspace

**Answer: C**

Explanation:

When integrating Slack with a third-party identity management system for automated user provisioning and deprovisioning The SCIM API is specifically designed for integrating Slack with external identity management systems, facilitating automated user provisioning and deprovisioning. This is essential in large organizations where user accounts need to be managed efficiently, ensuring that user access is granted or revoked in accordance with their employment status or role changes.

Why not the other options:

\*The SCIM API is not used for UI customization.

\*The SCIM API is focused on user management, not on developing or managing bots.

\*The SCIM API is not intended for analyzing message content or frequency.

### NEW QUESTION # 191

.....
