

# Perfect Latest PCCP Test Objectives - Pass PCCP Exam

2026 Latest ExamTorrent PCCP PDF Dumps and PCCP Exam Engine Free Share: <https://drive.google.com/open?id=1guofW1g3ZVgRU4GpZAeDcFZzAUOmkvTH>

For most users, access to the relevant qualifying examinations may be the first, so many of the course content related to qualifying examinations are complex and arcane. According to these ignorant beginners, the PCCP exam questions set up a series of basic course, by easy to read, with corresponding examples to explain at the same time, the PCCP study question let the user to be able to find in real life and corresponds to the actual use of PCCP learned knowledge. And it will only takes 20 to 30 hours for them to pass the PCCP exam.

## Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.</li> </ul>

Topic 5	<ul style="list-style-type: none"> <li>• <b>Cybersecurity:</b>This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&amp;CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.</li> </ul>

## Pass Guaranteed Quiz 2026 High Pass-Rate Palo Alto Networks Latest PCCP Test Objectives

If candidates are going to buy PCCP test dumps, they may consider the problem of the fund safety. If you are thinking the same question like this, our company will eradicate your worries. We choose the international third party to ensure the safety of the fund. The PCCP Test Dumps are effective and conclusive, you just need to use the least time to pass it. If you choose us, it means you choose the pass.

### Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q196-Q201):

#### NEW QUESTION # 196

Which two statements are true about servers in a demilitarized zone (DMZ)? (Choose two.)

- A. They can expose servers in the internal network to attacks.
- B. They are located in the internal network.
- C. They are isolated from the internal network.
- D. They can be accessed by traffic from the internet.

**Answer: C,D**

Explanation:

A demilitarized zone (DMZ) is a portion of an enterprise network that sits behind a firewall but outside of or segmented from the internal network<sup>1</sup>. The DMZ typically hosts public services, such as web, mail, and domain servers, that can be accessed by traffic from the internet<sup>1</sup>. However, the DMZ is isolated from the internal network by another firewall or security gateway, which prevents unauthorized access to the private network<sup>2</sup>. Therefore, statements A and D are true about servers in a DMZ, while statements B and C are false. References:

#### NEW QUESTION # 197

Which of the following is a Routed Protocol?

- A. Transmission Control Protocol (TCP)
- B. Routing Information Protocol (RIP)
- C. Domain Name Service (DNS)
- D. Internet Protocol (IP)

**Answer: D**

Explanation:

A routed protocol is a protocol by which data can be routed. It provides appropriate addressing information in its internet layer or network layer to allow a packet to be forwarded from one network to another network.

Examples of routed protocols are the Internet Protocol (IP) and Internetwork Packet Exchange (IPX). IP is the most widely used routed protocol on the Internet and other networks. It assigns a unique logical address to each device and enables data to be fragmented, reassembled, and routed across multiple networks. References:

#### NEW QUESTION # 198

Which key component is used to configure a static route?

- A. router ID
- **B. next hop IP address**
- C. enable setting
- D. routing protocol

**Answer: B**

Explanation:

A static route is a manually configured route that specifies the destination network and the next hop IP address or interface to reach it. A static route does not depend on any routing protocol and remains in the routing table until it is removed or overridden. Static routes are useful for defining default routes, reaching stub networks, or providing backup routes in case of link failures. To configure a static route in a virtual router on a Palo Alto Networks firewall, you need to specify the name, destination, interface, and next hop IP address or virtual router of the route. References: Configure a Static Route in Virtual Routers, Palo Alto Networks Certified Cybersecurity Entry-level Technician (PCCET), FREE Cybersecurity Education Courses

#### NEW QUESTION # 199

Which type of attack obscures its presence while attempting to spread to multiple hosts in a network?

- **A. Advanced malware**
- B. Denial of service
- C. Reconnaissance
- D. Smishing

**Answer: A**

Explanation:

Advanced malware is designed to evade detection and persist within a system, often using stealthy techniques to spread laterally across multiple hosts in a network without triggering alerts, making it especially dangerous and difficult to remove.

#### NEW QUESTION # 200

Which subnet does the host 192.168.19.36/27 belong?

- A. 192.168.19.64
- **B. 192.168.19.16**
- C. 192.168.19.0
- D. 192.168.19.32

**Answer: B**

Explanation:

To find the subnet that the host 192.168.19.36/27 belongs to, we need to convert the IP address and the subnet mask to binary form and perform a logical AND operation.

The /27 notation means that the subnet mask has 27 bits of ones and 5 bits of zeros.

In decimal form, the subnet mask is 255.255.255.224. The binary form of the IP address and the subnet mask are:

IP address: 11000000.10101000.00010011.00100100 Subnet mask: 11111111.11111111.11111111.11100000

The logical AND operation gives us the network prefix:

Network prefix: 11000000.10101000.00010011.00100000

To get the subnet address, we convert the network prefix back to decimal form:

Subnet address: 192.168.19.32

The subnet address is the first address in the subnet range. To find the last address in the subnet range, we flip the bits of the subnet

mask and perform a logical OR operation with the network prefix:

Flipped subnet mask: 00000000.00000000.00000000.00011111 Logical OR: 11000000.10101000.00010011.00111111

The last address in the subnet range is:

Last address: 192.168.19.63

The subnet range is from 192.168.19.32 to 192.168.19.63. The host 192.168.19.36 belongs to this subnet.

Therefore, the correct answer is B. 192.168.19.16, which is the second address in the subnet range.
