

answer, select the appropriate options in the answer area.

**Answer:**

Explanation:

Explanation:

#### NEW QUESTION # 45

You are developing an app that will be published to Microsoft AppSource.

The app requires code analyzers to enforce some rules. You plan to add the analyzers to the settings.json file.

You need to activate the analyzers for the project.

Which three code analyzers should you activate to develop the app for AppSource? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. PerTenantExtensionCop
- B. a custom rule set
- C. CodeCop
- D. UICop
- E. AppSourceCop

**Answer: C,D,E**

Explanation:

PerTenantExtensionCop and AppSourceCop conflicts with each other. Code is for Appsource, so no need for PerTenantExtensionCop.

#### NEW QUESTION # 46

You have a per tenant extension that contains the following code.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

\* Codeunit "Discount Mgmt." compiles successfully. = NO

\* VariantLine in line 17 must be changed to Line and the DiscountAmount removed for the codeunit to compile. = NO

\* The DiscountIsValid method must be defined in the interface for the code to compile. = YES The codeunit "Discount Mgmt." will not compile successfully as is because the DiscountIsValid method is not defined in the "IDiscount Calculation" interface, yet it is being declared in the codeunit which implements this interface. AL requires that all procedures in the codeunit that implements an interface must be defined in the interface itself.

The VariantLine in line 17 does not need to be changed to Line, nor does the DiscountAmount need to be removed for the codeunit to compile. These are valid declarations in AL and they are correctly implemented in the codeunit. The Variant data type in AL is used to handle various data types and DiscountAmount is a valid return type for a procedure.

For the code to compile successfully, the DiscountIsValid method must be included in the interface because AL enforces that any codeunit implementing an interface must implement all the methods defined in that interface.

#### NEW QUESTION # 47

You need to parse the API JSON response and retrieve each order no. in the response body.

How should you complete the code segment? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Code Segment Analysis:

\* The AL code is trying to read JSON data from a response and process it to extract subcontracting order numbers. It uses JsonToken, JsonObject, and JsonArray to work with the JSON data.

\* JToken.ReadFrom(Data): This line reads the incoming JSON data and converts it into a token. It processes the full JSON body so you can start working with it.

\* JToken.SelectToken('results'): This line selects the part of the JSON containing the results array.

The key "results" is where the JSON response data is expected to be found.

\* JsonArray: Once the results are extracted, they are stored as an array, and each element in the array (which is expected to contain subcontracting order numbers) is processed.

\* SubcontractingOrderNo: The extracted order\_no from the JSON is stored in this variable.

Breakdown of Steps:

\* JToken.ReadFrom(Data): This step reads the entire JSON response.

\* JToken.SelectToken('results'): This step selects the results array from the JSON response.

\* JArray.AsArray(): This step converts the selected results token into a JSON array that can be iterated over.

\* GetValueAsText(JToken, 'order\_no'): This step retrieves the order\_no from each element in the array.

Correct Code Completion:

\* JToken.ReadFrom(Data): This is the correct method to read the incoming JSON response, as it will convert the string into a JsonToken that can be further processed.

\* JToken.SelectToken('results'): This is the correct method to extract the results array from the token.

This method looks for the key "results" in the JSON and retrieves the relevant array.

Final Code Segment:

al

Copy code

```
procedure ReadJsonData(Data: text)
```

```
var
```

```
JToken: JToken;
```

```
JObject: JsonObject;
```

```
JArray: JsonArray;
```

```
SubcontractingOrderNo: Code[20];
```

```
begin
```

```
if Data = " then
```

```
exit;
```

```
JToken := JToken.ReadFrom(Data); // Step 1: Read the JSON response data.
```

```
JToken := JToken.SelectToken('results'); // Step 2: Select the "results" array.
```

```
JArray := JToken.AsArray(); // Convert the token into a JSON array.
```

```
foreach JToken in JArray do begin
```

```
SubcontractingOrderNo := GetValueAsText(JToken, 'order_no'); // Retrieve the order number.
```

```
end;
```

```
end;
```

\* JToken.ReadFrom(Data): This reads the raw JSON data string and converts it into a JSON token that can be processed.

\* JToken.SelectToken('results'): This extracts the results array from the JSON data.

\* JArray.AsArray(): Converts the token into an array so we can iterate over it.

\* GetValueAsText(JToken, 'order\_no'): Extracts the order\_no value from each item in the array.

## NEW QUESTION # 48

.....

MB-820 Exam is a Microsoft certification exam and IT professionals who have passed some Microsoft certification exams are popular in IT industry. So more and more people participate in MB-820 certification exam, but MB-820 certification exam is not very simple. If you do not have participated in a professional specialized training course, you need to spend a lot of time and effort to prepare for the exam. But now ActualCollection can help you save a lot of your precious time and energy.

**MB-820 Valid Braindumps Free:** <https://www.actualcollection.com/MB-820-exam-questions.html>

If you choose to purchase our MB-820 quiz torrent, you will have the right to get the update for free, Microsoft MB-820 Knowledge Points Credible experts groups offering help, You can free download the trial of MB-820 Valid Braindumps Free - Microsoft Dynamics 365 Business Central Developer actual collection before you buy, But how to prepare for the MB-820 exam will be a thorny problem for most of the candidates, do not worry about that anymore, you will find the best remedy in this website —our MB-820 test braindumps, Microsoft MB-820 Knowledge Points Our company keeps pace with contemporary talent
