## (Q72-Q77):

### NEW QUESTION # 72

To complete their day-to-day operations, remote users require access to a TCP-based application that is hosted on a private web server. Which FortiSASE deployment use case provides the most efficient and secure method for meeting the remote users' requirements?

- A. next generation firewall (NGFW)
- B. SD-WAN private access
- **C. zero trust network access (ZTNA) private access**
- D. inline-CASB

**Answer: C**

Explanation:

ZTNA ensures that remote users can securely connect to private applications based on identity verification and security policies, without needing a traditional VPN. This access method provides strong security with least-privilege access, which is ideal for protecting private web servers and their data from unauthorized access. It also improves efficiency by dynamically verifying user identity and device posture before granting access.

### NEW QUESTION # 73

Your FortiSASE customer has a small branch office in which ten users will be using their personal laptops and mobile devices to access the internet.

Which deployment should they use to secure their internet access with minimal configuration?

- A. Deploy SD-WAN on-ramp to secure internet access.
- B. Deploy FortiClient endpoint agent to secure internet access.
- **C. Deploy FortiAP to secure internet access.**
- D. Deploy FortiGate as a LAN extension to secure internet access.

**Answer: C**

Explanation:

Deploying FortiAP enables secure internet access for unmanaged personal devices in small branch offices with minimal configuration by automatically directing traffic through FortiSASE, eliminating the need for endpoint installation or complex setup.

### NEW QUESTION # 74

You are designing a new network, and the cybersecurity policy mandates that all remote users working from home must always be connected and protected. Which FortiSASE component facilitates this always-on security measure? (Choose one answer)

- A. SDWAN on-ramp2
- B. Thin-branch SASE extension
- **C. Unified FortiClient**
- D. Secure web gateway

**Answer: C**

Explanation:

In a FortiSASE environment, the Unified FortiClient agent is the critical component that fulfills the requirement for "always-on" connectivity and security for remote users.

\* Persistent Encrypted Tunnels: The Unified FortiClient maintains a persistent, always-on connection to the FortiSASE infrastructure.4 This is typically achieved through an auto-connect VPN tunnel (SSL or IPsec) that initiates as soon as the user logs into their device and has internet access.

\* Continuous Security Enforcement: By staying connected to a nearby FortiSASE Point of Presence (PoP), the endpoint ensures that all traffic is inspected. This allows the organization to enforce a consistent security posture—including Web Filtering, Antivirus, and Application Control—regardless of whether the user is at home, in a coffee shop, or traveling.

\* Zero-Trust Integration: Beyond simple connectivity, the unified agent supports Universal ZTNA. It continuously verifies the identity of the user and the security posture of the device before granting access to specific applications, thereby satisfying modern zero-trust security mandates.

\* Comparison of Other Components:

\* SD-WAN on-ramp (B): Used primarily to integrate existing branch office SD-WAN networks with the SASE cloud for private application access.

\* Secure Web Gateway (C): While a feature of the SASE PoP, the agentless SWG deployment (using PAC files) does not provide the same level of "always-on" persistent tunnel protection as the FortiClient agent.

\* Thin-branch SASE extension (D): Focused on securing small branch locations (using FortiAP or FortiExtender) where individual client agents may not be deployed on every device.

### NEW QUESTION # 75

What is the recommended method to upgrade FortiClient in a FortiSASE deployment?

- A. The FortiSASE administrator must assign endpoint groups to an endpoint upgrade rule.
- B. FortiSASE automatically upgrades FortiClient when a new version is released.
- C. The FortiSASE administrator will upload the desired FortiClient version to the FortiSASE portal and push it to endpoints.
- D. Remote users must upgrade the FortiClient manually.

#### Answer: A

Explanation:

In FortiSASE, the recommended method to upgrade FortiClient is to configure an endpoint upgrade rule and assign it to specific endpoint groups. This ensures controlled and automated upgrades across managed devices.

### NEW QUESTION # 76

Which FortiSASE component protects users from online threats by hosting their browsing sessions on a remote container within a secure environment?

- A. secure web gateway (SWG)
- B. cloud access security broker (CASB)
- C. remote browser isolation (RBI)
- D. data loss prevention (DLP)

#### Answer: C

Explanation:

Remote Browser Isolation (RBI) protects users by executing their web browsing sessions in a remote, secure container, preventing malicious content from reaching the local device.
