

# Valid Google Professional-Cloud-DevOps-Engineer Questions: 100% Authentic [2026]

P.S. Free 2026 Google Professional-Cloud-DevOps-Engineer dumps are available on Google Drive shared by PDF4Test: [https://drive.google.com/open?id=1mkH-R\\_rjwcDMXM3wwNb1c3E4DXzmON8w](https://drive.google.com/open?id=1mkH-R_rjwcDMXM3wwNb1c3E4DXzmON8w)

Our website is a leading dumps provider worldwide that offers the latest valid test questions and answers for certification test, especially for Google practice test. We paid great attention to the study of Professional-Cloud-DevOps-Engineer vce braindumps for many years and are specialized in the questions of actual test. You can find everything that you need to pass test in our Professional-Cloud-DevOps-Engineer learning materials.

To become a Google Cloud Certified Professional Cloud DevOps Engineer, candidates must pass the certification exam, which consists of multiple-choice and multiple-select questions. Professional-Cloud-DevOps-Engineer Exam covers a wide range of topics, including GCP services such as Kubernetes Engine, Cloud Functions, and Cloud Run, as well as DevOps practices such as continuous integration and delivery, monitoring and logging, and infrastructure as code. Candidates must also demonstrate their ability to troubleshoot issues and optimize performance in a GCP environment. Overall, the certification exam is a rigorous test of a candidate's skills and knowledge in deploying and managing applications on GCP, and passing it is a significant achievement for any DevOps professional.

To be eligible for the exam, candidates should have at least 3 years of industry experience in software development, systems operations, or other relevant fields, and have a good understanding of cloud computing concepts and technologies. They should also have hands-on experience with GCP tools and services, including Compute Engine, Kubernetes Engine, Cloud Storage, Cloud SQL, Cloud Functions, and Stackdriver. Additionally, candidates should be familiar with DevOps methodologies and practices, such as Continuous Integration/Continuous Delivery (CI/CD), Infrastructure as Code (IaC), and Configuration Management. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification exam consists of multiple-choice questions, scenario-based questions, and performance-based tasks, and requires a passing score of 70% or higher.

## Pass Guaranteed Google - Professional-Cloud-DevOps-Engineer - Google Cloud Certified - Professional Cloud DevOps Engineer Exam Useful Reliable Exam Practice

There is a succession of anecdotes, and there are specialized courses. Experts call them experts, and they must have their advantages. They are professionals in every particular field. The Professional-Cloud-DevOps-Engineer test material, in order to enhance the scientific nature of the learning platform, specifically hired a large number of qualification exam experts, composed of product high IQ team, these experts by combining his many years teaching experience of Professional-Cloud-DevOps-Engineer quiz guide and research achievements in the field of the test, to exam the popularization was very complicated content of Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam dumps, better meet the needs of users of various kinds of cultural level. Expert team not only provides the high quality for the Professional-Cloud-DevOps-Engineer Quiz guide consulting, also help users solve problems at the same time, leak fill a vacancy, and finally to deepen the user's impression, to solve the problem of Google test material and no longer make the same mistake.

## Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q37-Q42):

### NEW QUESTION # 37

You are creating a CI/CD pipeline in Cloud Build to build an application container image. The application code is stored in GitHub. Your company requires that production image builds are only run against the main branch and that the change control team approves all pushes to the main branch. You want the image build to be as automated as possible. What should you do?

Choose 2 answers.

- A. Configure a branch protection rule for the main branch on the repository.
- B. Create a trigger on the Cloud Build job. Set the repository event setting to Push to a branch.
- C. Create a trigger on the Cloud Build job. Set the repository event setting to Pull request.
- D. Add the owners file to the Included files filter on the trigger.
- E. Enable the Approval option on the trigger.

**Answer: A,B**

Explanation:

The best options for creating a CI/CD pipeline in Cloud Build to build an application container image and ensuring that production image builds are only run against the main branch and that the change control team approves all pushes to the main branch are to create a trigger on the Cloud Build job, set the repository event setting to Push to a branch, and configure a branch protection rule for the main branch on the repository. A trigger is a resource that starts a build when an event occurs, such as a code change. By creating a trigger on the Cloud Build job and setting the repository event setting to Push to a branch, you can ensure that the image build is only run when code is pushed to a specific branch, such as the main branch. A branch protection rule is a rule that enforces certain policies on a branch, such as requiring reviews, status checks, or approvals before merging code. By configuring a branch protection rule for the main branch on the repository, you can ensure that the change control team approves all pushes to the main branch.

### NEW QUESTION # 38

You are managing an application that exposes an HTTP endpoint without using a load balancer. The latency of the HTTP responses is important for the user experience. You want to understand what HTTP latencies all of your users are experiencing. You use Stackdriver Monitoring. What should you do?

- A. \* In your application, create a metric with a metricKind set to gauge and a valueType set to distribution. \* In Stackdriver's Metrics Explorer, use a Heatmap graph to visualize the metric.
- B. \* In your application, create a metric with a metricKind set to DELTA and a valueType set to DOUBLE. \* In Stackdriver's Metrics Explorer, use a Stacked Bar graph to visualize the metric.
- C. \* In your application, create a metric with a metricKind set to CUMULATIVE and a valueType set to DOUBLE. \* In Stackdriver's Metrics Explorer, use a Line graph to visualize the metric.
- D. \* In your application, create a metric with a metricKind set to METRIC\_KIND\_UNSPECIFIED and a valueType set to INT64. \* In Stackdriver's Metrics Explorer, use a Stacked Area graph to visualize the metric.

**Answer: A**

### NEW QUESTION # 39

You need to reduce the cost of virtual machines (VMs) for your organization. After reviewing different options, you decide to leverage preemptible VM instances. Which application is suitable for preemptible VMs?

- A. A GPU-accelerated video rendering platform that retrieves and stores videos in a storage bucket.
- B. A distributed, eventually consistent NoSQL database cluster with sufficient quorum.
- C. The organization's public-facing website.
- D. A scalable in-memory caching system.

**Answer: A**

Explanation:

<https://cloud.google.com/compute/docs/instances/preemptible>

### NEW QUESTION # 40

Your application artifacts are being built and deployed via a CI/CD pipeline. You want the CI/CD pipeline to securely access application secrets. You also want to more easily rotate secrets in case of a security breach. What should you do?

- A. Encrypt the secrets and store them in the source code repository. Store a decryption key in a separate repository and grant your pipeline access to it
- B. Prompt developers for secrets at build time. Instruct developers to not store secrets at rest.
- **C. Store secrets in a separate configuration file on Git. Provide select developers with access to the configuration file.**
- D. Store secrets in Cloud Storage encrypted with a key from Cloud KMS. Provide the CI/CD pipeline with access to Cloud KMS via IAM.

**Answer: C**

### NEW QUESTION # 41

You deploy a new release of an internal application during a weekend maintenance window when there is minimal user traffic. After the window ends, you learn that one of the new features isn't working as expected in the production environment. After an extended outage, you roll back the new release and deploy a fix. You want to modify your release process to reduce the mean time to recovery so you can avoid extended outages in the future. What should you do?

Choose 2 answers

- **A. Configure a CI server. Add a suite of unit tests to your code and have your CI server run them on commit and verify any changes.**
- B. Integrate a code linting tool to validate coding standards before any code is accepted into the repository.
- **C. Adopt the blue/green deployment strategy when releasing new code via a CD server.**
- D. Before merging new code, require 2 different peers to review the code changes.
- E. Require developers to run automated integration tests on their local development environments before release.

**Answer: A,C**

### NEW QUESTION # 42

.....

Our Professional-Cloud-DevOps-Engineer preparation practice are highly targeted and have a high hit rate, there are a lot of learning skills and key points in the exam, even if your study time is very short, you can also improve your Professional-Cloud-DevOps-Engineer exam scores very quickly. Even if you have a week foundation, I believe that you will get the certification by using our Professional-Cloud-DevOps-Engineer Study Materials. We can claim that with our Professional-Cloud-DevOps-Engineer practice engine for 20 to 30 hours, you will be ready to pass the exam with confidence.
