

Free PDF 2026 Trustable HPE6-A78: Aruba Certified Network Security Associate Exam Advanced Testing Engine

DOWNLOAD the newest NewPassLeader HPE6-A78 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1kV73Ombec6XAaYDZ4V8wF10Ts9s8WHZC>

NewPassLeader provides Aruba Certified Network Security Associate Exam HPE6-A78 desktop-based practice software for you to test your knowledge and abilities. The Aruba Certified Network Security Associate Exam HPE6-A78 desktop-based practice software has an easy-to-use interface. You will become accustomed to and familiar with the free demo for Aruba Certified Network Security Associate Exam HPE6-A78 Exam Questions. Exam self-evaluation techniques in our Aruba Certified Network Security Associate Exam HPE6-A78 desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the Aruba Certified Network Security Associate Exam certification exam.

Our product boosts three versions which include PDF version, PC version and APP online version. The Aruba Certified Network Security Associate Exam test guide is highly efficient and the forms of the answers and questions are the same. Different version boosts their own feature and using method, and the client can choose the most convenient method. For example, PDF format of HPE6-A78 guide torrent is printable and boosts instant access to download. You can learn at any time, and you can update the HPE6-A78 Exam Questions freely in any day of one year. It provides free PDF demo. You can learn the APP online version of HPE6-A78 guide torrent in your computer, cellphone, laptop or other set. Every version has their advantages so you can choose the most suitable method of Aruba Certified Network Security Associate Exam test guide to prepare the exam.

Ace the Preparation HP HPE6-A78 Exam Questions in PDF Format

The language of our HPE6-A78 qualification test guide is simple. The learners may come from many social positions and their abilities to master our HPE6-A78 test materials are varied. Based on this consideration we apply the most simple and easy-to-be-understood language to help the learners no matter he or she is the students or the in-service staff, the novice or the experienced employee which have worked for many years. HPE6-A78 Certification guide use the simple language to explain the answers and detailed knowledge points to help pass the HPE6-A78 exam.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q89-Q94):

NEW QUESTION # 89

Your company policies require you to encrypt logs between network infrastructure devices and Syslog servers. What should you do to meet these requirements on an ArubaOS-CX switch?

- A. Specify a priv key with the Syslog settings that matches a priv key on the Syslog server.
- **B. Specify the Syslog server with the TLS option and make sure the switch has a valid certificate.**
- C. Specify the Syslog server with the UDP option and then add an CPsec tunnel that selects Syslog.
- D. Set up RadSec and then enable Syslog as a protocol carried by the RadSec tunnel.

Answer: B

Explanation:

To ensure secure transmission of log data over the network, particularly when dealing with sensitive or critical information, using TLS (Transport Layer Security) for encrypted communication between network devices and syslog servers is necessary:

Secure Logging Setup: When configuring an ArubaOS-CX switch to send logs securely to a Syslog server, specifying the server with the TLS option ensures that all transmitted log data is encrypted. Additionally, the switch must have a valid certificate to establish a trusted connection, preventing potential eavesdropping or tampering with the logs in transit.

Other Options:

Option B, Option C, and Option D are less accurate or applicable for directly encrypting log data between the device and Syslog server as specified in the company policies.

NEW QUESTION # 90

What is a correct guideline for the management protocols that you should use on ArubaOS-Switches?

- A. Disable HTTPS and use SSH instead
- B. Disable SSH and use https instead.
- C. Disable Telnet and use TFTP instead.
- **D. Disable Telnet and use SSH instead**

Answer: D

Explanation:

In managing ArubaOS-Switches, the best practice is to disable less secure protocols such as Telnet and use more secure alternatives like SSH (Secure Shell). SSH provides encrypted connections between network devices, which is critical for maintaining the security and integrity of network communications. This guideline is aligned with general security best practices that prioritize the use of protocols with strong, built-in encryption mechanisms to prevent unauthorized access and ensure data privacy.

NEW QUESTION # 91

You configure an ArubaOS-Switch to enforce 802.1X authentication with ClearPass Policy Manager (CPPM) denned as the RADIUS server Clients cannot authenticate You check Aruba ClearPass Access Tracker and cannot find a record of the authentication attempt.

What are two possible problems that have this symptom? (Select two)

- **A. CPPM does not have a network device defined for the switch's IP address.**
- B. Clients are configured to use a mismatched EAP method from the one In the CPPM service.
- **C. The RADIUS shared secret does not match between the switch and CPPM.**
- D. users are logging in with the wrong usernames and passwords or invalid certificates.
- E. Clients are not configured to trust the root CA certificate for CPPM's RADIUS/EAP certificate.

Answer: A,C

Explanation:

If clients cannot authenticate and there is no record of the authentication attempt in Aruba ClearPass Access Tracker, two possible problems that could cause this symptom are:

The RADIUS shared secret does not match between the switch and CPPM. This mismatch would prevent the switch and CPPM from successfully communicating, so authentication attempts would fail, and no record would appear in Access Tracker.

CPPM does not have a network device profile defined for the switch's IP address. Without a network device profile, CPPM would not recognize authentication attempts coming from the switch and would not process them, resulting in no logs in Access Tracker.

The other options are incorrect because:

Users logging in with the wrong credentials would still generate an attempt record in Access Tracker.

Clients configured to use a mismatched EAP method would also generate an attempt record in Access Tracker. Clients not configured to trust the root CA certificate for CPPM's RADIUS/EAP certificate might fail authentication, but the attempt would still be logged in Access Tracker.

NEW QUESTION # 92

You have been asked to find logs related to port authentication on an ArubaOS-CX switch for events logged in the past several hours. But, you are having trouble searching through the logs. What is one approach that you can take to find the relevant logs?

- A. Specify a logging facility that selects for "port-access" messages.
- **B. Add the "-C and *-c port-access" options to the "show logging" command.**
- C. Configure a logging filter for the "port-access" category, and apply that filter globally.
- D. Enable debugging for "portaccess" to move the relevant logs to a buffer.

Answer: B

NEW QUESTION # 93

A company with 382 employees wants to deploy an open WLAN for guests. The company wants the experience to be as follows:

- Guests select the WLAN and connect without having to enter a password.
- Guests are redirected to a welcome/web page and log in.

The company also wants to provide encryption for the network for devices that are capable, you implement for the WLAN? Which security options should

- A. WPA3-Personal and MAC-Auth
- B. Captive portal and WPA3-Personal
- **C. Captive portal and Opportunistic Wireless Encryption (OWE) in transition mode**
- D. Opportunistic Wireless Encryption (OWE) and WPA3-Personal

Answer: C

Explanation:

For a company that wants to deploy an open WLAN for guests with the ease of access and encryption for capable devices, using a captive portal with Opportunistic Wireless Encryption (OWE) in transition mode would be suitable. The captive portal allows for a user-friendly login page for authentication without a pre-shared key, and OWE provides encryption to protect user data without the complexities of traditional WPA or WPA2 encryption, which is ideal for guest networks. Transition mode allows devices that support OWE to use it while still allowing older or unsupported devices to connect.

:

Wi-Fi Alliance recommendations for OWE.

Best practices for guest Wi-Fi network setup.

NEW QUESTION # 94

.....

You can enjoy 365 days free update after purchase of our HPE6-A78 exam torrent. About the updated HP study material, our system will send the latest one to your payment email automatically as soon as the HPE6-A78 is updated. So you can study with the latest HPE6-A78 Study Material. In addition, NewPassLeader offers you the best valid HPE6-A78 training pdf, which can ensure you 100% pass. Try our HPE6-A78 free demo before you buy, you will be surprised by our high quality HPE6-A78 pdf vce.
