2026 Ping Identity PAP-001 Marvelous Complete Exam Dumps

Society will never welcome lazy people, and luck will never come to those who do not. We must continue to pursue own life value, such as get the test Ping Identity certification, not only to meet what we have now, but also to constantly challenge and try something new and meaningful. For example, our PAP-001 prepare questions are the learning product that best meets the needs of all users. There are three version of our PAP-001 training prep: PDF, Sofi and APP versions. And you can free download the demo of our PAP-001 learning guide before your payment. Just rush to buy our PAP-001 exam brandump!

Ping Identity Certified Professional - PingAccess Sample Questions (Q27-Q32):

NEW QUESTION # 27

Anycompany has several applications that need to load images and fonts from www.anycompany.com. Users are currently getting

CORS errors. How should the Cross-Origin Request rule be set to allow secure access?

- A. Allowed Origins to*and enable the Allow Credentials option
- **B. Allowed Origins towww.anycompany.comand enable the Allow Credentials option**
- C. Allowed Origins to*.anycompany.comand disable the Allow Credentials option
- D. Allowed Origins value for each of the listed domains

Answer: B

Explanation:

To prevent CORS errors, administrators must configure aCross-Origin Request (CORS) Processing Rule.

The secure practice is to allow thespecific trusted domain(www.anycompany.com) and, when cookies or credentials are required, to enableAllow Credentials.

Exact Extract:

"For secure CORS, specify exact origins rather than wildcards. Enable 'Allow Credentials' when client-side resources must include cookies or authentication data."

* Option Ais incomplete - multiple values are possible, but in this case onlywww.anycompany.comis required.

* Option Bis less secure - using a wildcard (*.anycompany.com) broadens exposure unnecessarily.

* Option Cis insecure -*with credentials is disallowed by CORS specifications.

* Option Dis correct - restricts access to the trusted domain and allows credentialed requests.

Reference:PingAccess Administration Guide -Cross-Origin Request Rule

NEW QUESTION # 28

The application team is requesting step-up authentication only for a few specific resources while maintaining previous authentication for other resources. What change would the administrator need to make?

- A. Change the Context Root
- **B. Authentication Challenge Policy**
- C. Use context root as reserved resource base path
- D. Manual Resource Ordering

Answer: B

Explanation:

To enforcestep-up authenticationfor selected resources, PingAccess usesAuthentication Challenge Policies

. These policies allow different challenge methods to be applied depending on the resource.

Exact Extract:

"Authentication challenge policies define how PingAccess challenges users for authentication and are often applied when step-up authentication is required for specific resources."

* Option A (Authentication Challenge Policy)is correct - it ensures only certain resources trigger step- up MFA.

* Option Bis incorrect; the reserved resource base path is unrelated to authentication.

* Option Cis incorrect; changing the context root just changes the URL path prefix.

* Option Dis incorrect; manual ordering of resources is unrelated to enforcing MFA.

Reference:PingAccess Administration Guide -Authentication Challenge Policies

NEW QUESTION # 29

An application owner would like customized errors for rule violations within an application. Where is this configured?

- **A. Within the Root Resource of the Application**
- B. When combining Rules into Rule Sets
- C. When assigning a Rule to a Resource
- D. Within the Rule definition

Answer: A

Explanation:

PingAccess allows administrators to configurecustom error pages or messagesat theRoot Resource levelof an application. This ensures that when rule violations (e.g., authorization failures) occur, the application can display tailored error responses.

Exact Extract:

"Custom error handling for rule violations is configured within the Root Resource of an application."

- * Option A is incorrect - assigning a rule to a resource does not allow defining custom errors.
- * Option B is correct - the Root Resource is where administrators define custom error handling for the entire application.
- * Option C is incorrect - Rule Sets only combine rules; they do not handle error responses.
- * Option D is incorrect - individual rule definitions do not contain custom error configurations.

Reference: PingAccess Administration Guide -Configuring Application Resources and Error Handling

NEW QUESTION # 30

During a business review of an application, the administrator needs to change the Resource Authentication to anonymous. What are the two effects of making this change to the resource? (Choose 2 answers.)

- A. Requests to this resource are not logged, and Identity Mappings are applied.
- B. The resource requires no further authentication, and no rules will apply.
- C. The resource requires no further authentication, and Identity Mappings still apply.
- D. The resource requires no further authentication, and all Access Control rules still apply.
- E. The resource requires no further authentication, and Processing rules still apply.

Answer: C,E

Explanation:

When a resource is configured as anonymous, PingAccess does not challenge the user for authentication. However, certain processing and identity propagation still occur.

Exact Extract:

"Anonymous resources do not require authentication. Identity mappings and request/response processing rules still apply."

- * Option A is incorrect because rules such as identity mappings and processing still apply.
- * Option B is correct - Identity Mappings can still forward attributes, even for anonymous access.
- * Option C is correct - Processing rules (e.g., request/response modifications) still apply.
- * Option D is incorrect - requests are logged; anonymous does not disable logging.
- * Option E is incorrect - access control rules (authorization) are not evaluated for anonymous resources.

NEW QUESTION # 31

What is the purpose of the Mutual TLS Site Authenticator?

- A. Allows PingAccess to authenticate to the backend server
- B. Allows the backend server to authenticate to PingAccess
- C. Allows the user to authenticate to the backend server
- D. Allows PingAccess to authenticate to the token provider

Answer: A

Explanation:

Mutual TLS (mTLS) is used to establish two-way authentication where both the client and the server present certificates to prove their identity. In the case of PingAccess, a Mutual TLS Site Authenticator is configured when PingAccess acts as a reverse proxy making requests to a backend (target) server.

* Exact Extract from PingAccess documentation:

"Mutual TLS site authenticators provide client certificate authentication when PingAccess connects to a backend site. This allows PingAccess to present its certificate to the target server during the TLS handshake." This means the purpose is for PingAccess (client) to authenticate itself to the backend server (target resource) when establishing a secure connection.

Why other options are wrong:

- * A. Allows the backend server to authenticate to PingAccess
- * Incorrect. That's normal server-side TLS authentication (the server presents a cert to the client), not mutual TLS initiated by PingAccess.
- * B. Allows the user to authenticate to the backend server
- * Incorrect. End users do not directly use this setting; this is between PingAccess and the backend application server.
- * C. Allows PingAccess to authenticate to the backend server
- * Correct. This is exactly the definition of a Mutual TLS Site Authenticator in PingAccess.
- * D. Allows PingAccess to authenticate to the token provider
- * Incorrect. That would involve OIDC/OAuth token exchange and possibly TLS trust, but it's not the role of the Site Authenticator.

Thus, the correct answer is C. Allows PingAccess to authenticate to the backend server.
Reference: PingAccess Administration Guide-Configuring Site Authenticators (Mutual TLS).

NEW QUESTION # 32

.....

The exam outline will be changed according to the new policy every year, and the PAP-001 questions torrent and other teaching software, after the new exam outline, we will change according to the syllabus and the latest developments in theory and practice and revision of the corresponding changes, highly agree with outline. After you choose our study materials, you can master the examination point from the PAP-001 Guide question. Then, you will have enough confidence to pass your exam. As for the safe environment and effective product, why don't you have a try for our PAP-001 question torrent, never let you down!

Flexible PAP-001 Learning Mode: <https://www.passtorrent.com/PAP-001-latest-torrent.html>
