

WatchGuard Network-Security-Essentials Reliable Test Labs & Network-Security-Essentials Test Quiz

Network Security Essentials Exam Guide

The Network Security Essentials exam tests your knowledge of basic networking and how to configure, manage, and monitor a WatchGuard Firebox. This exam is appropriate for network administrators who have experience configuring and managing Firebox devices that run Fireware v12.4.

Exam Overview

Key Concepts

To successfully complete the Network Security Essentials exam, you must understand these key concepts:

Fireware Knowledge

- Firebox activation and initial setup
- Network configuration
- Policy and proxy configuration
- Subscription services configuration
- User authentication
- Device monitoring, logging, and reporting
- Branch office and mobile VPN configuration

General Network and Security Knowledge

- IPv4 networking concepts (subnets, DNS, TCP/IP, DHCP, NAT, static routing)
- General understanding of firewalls

Our Network-Security-Essentials practice test is designed to accelerate your professional knowledge and improve your ability to solve the difficulty of Network-Security-Essentials real questions. Well preparation of certification exam is the first step of passing Network-Security-Essentials Exam Tests and can save you lots time and money. Our latest Network-Security-Essentials dumps torrent contains the valid questions and answers which updated constantly.

Only 20-30 hours on our Network-Security-Essentials learning guide are needed for the client to prepare for the test and it saves our client's time and energy. Most people may wish to use the shortest time to prepare for the Network-Security-Essentials test and then pass the test with our Network-Security-Essentials Study Materials successfully because they have to spend their most time and energy on their jobs, learning, family lives and other important things. And our Network-Security-Essentials exam brandumps won't let you down!

Trustworthy Network-Security-Essentials Reliable Test Labs & Leader in Qualification Exams & Accurate Network-Security-Essentials Test Quiz

To get respected jobs in tech companies around the globe, hundreds of people take the WatchGuard certification exam every year. Once they clear WatchGuard Network-Security-Essentials Exam, they easily get jobs and promotions. Hundreds of applicants who appear in the WatchGuard Network-Security-Essentials Exam don't get a passing score. The major reason behind their failure in the

WatchGuard Network-Security-Essentials Exam is studying the material which is not the latest. So, to save your resources, you must prepare with WatchGuard Network-Security-Essentials Dumps which has real and updated exam material.

WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q33-Q38):

NEW QUESTION # 33

If you have only one public IP address, can you use Static NAT to enable inbound connections to both an email server and a web server on the private network? (Select one.)

- A. Yes, if both servers are on different private subnets
- B. No, you must assign a public IP address to each server
- C. Yes, if both servers use different ports
- D. No, you must use Dynamic NAT to route inbound connections to more than one server

Answer: C

Explanation:

With only one public IP address, you can still configure Static NAT to route connections to both an email server and a web server, as long as each service is accessed on a different port. For instance, HTTP/HTTPS traffic for the web server can use port 80/443, while the email server can use ports associated with email protocols (e.g., 25 for SMTP). Static NAT can direct incoming requests to different internal servers based on port, making this approach feasible.

NEW QUESTION # 34

You routinely ship Fireboxes directly to remote offices without configuring them first. What is the zero-touch deployment method you can use to apply a configuration file after a Firebox arrives at a remote office? (Select one.)

- A. WatchGuard System Manager
- B. Firebox Deployment Manager
- C. Dimension Command
- D. RapidDeploy
- E. Fireware Web UI

Answer: D

Explanation:

When shipping Fireboxes to remote offices without pre-configuration, the RapidDeploy feature is designed to facilitate zero-touch deployment. RapidDeploy enables network administrators to apply a pre-configured setup file after the device arrives at its destination.

* Process of RapidDeploy: Administrators can upload a configuration file to the WatchGuard Cloud or another accessible location, from which the Firebox downloads its initial configuration upon connection. This method ensures that even with remote deployment, the Firebox will automatically configure itself based on predefined settings, eliminating the need for manual on-site setup.

* Advantages: RapidDeploy streamlines setup for large-scale, geographically distributed environments where physical access may be limited. This feature is specifically useful for organizations seeking a scalable, efficient deployment process for devices in remote locations.

NEW QUESTION # 35

When you configure a Branch Office VPN tunnel to a third-party device, AES-GCM encryption is recommended for:

- A. Connections to third-party firewalls only
- B. Troubleshooting purposes
- C. Better performance and throughput when supported by both VPN endpoints
- D. Routing over a BOVPN
- E. Better uptime because of additional keep-alive options

Answer: C

Explanation:

AES-GCM (Galois/Counter Mode) encryption is recommended for VPNs because it provides strong encryption with high

performance and low overhead, making it an ideal choice for environments where both endpoints support it. AES-GCM combines encryption and authentication in a single step, resulting in faster processing compared to traditional encryption modes that handle these tasks separately. This mode is advantageous for maintaining high throughput in VPN tunnels, especially beneficial for branch office or inter-site VPNs where performance is critical.

NEW QUESTION # 36

Users cannot download a PDF file from your intranet. You know the file is safe to download. When you review the log messages, you see that IntelligentAV identified the file as malicious. The only way to resolve this is to change the file extension.

- A. True
- B. False

Answer: B

Explanation:

When IntelligentAV identifies a file as malicious, users have options other than changing the file extension to resolve the issue. IntelligentAV relies on AI-driven detection, and if the PDF file is known to be safe, an administrator can manually adjust the IntelligentAV settings or add an exception for the specific file.

Changing the file extension alone does not address the root of the detection and is not a reliable solution to bypass IntelligentAV checks.

NEW QUESTION # 37

In Firebox System Manager, where can you perform each of these tasks?

Answer:

Explanation:

Explanation:

Here are the correct answers based on the Firebox System Manager interface functions:

* See the routing table and interface statistics
answer: Firebox System Manager - Status Report
Explanation: The Status Report section in Firebox System Manager includes information on network routing and interface statistics, providing insights into network paths and interface performance.

* See a list of users connected to the Firebox
answer: Firebox System Manager - Authentication List
Explanation: The Authentication List displays all active user sessions connected to the Firebox, showing authenticated users and their session details.

* Learn the status of your IPS signature database
answer: Firebox System Manager - Subscription Services
Explanation: Subscription Services in FSM gives information on the status of services like IPS, showing the update status and version of the signature database.

* Ping the source of a denied packet
answer: Firebox System Manager - Traffic Monitor
Explanation: The Traffic Monitor tool allows administrators to track packet details and offers functionality to ping sources directly, aiding in network troubleshooting.

* Block all traffic for an IP address
answer: Firebox System Manager - Blocked Sites List
Explanation: The Blocked Sites List feature in FSM lets administrators add IP addresses to a blacklist, blocking all incoming and outgoing traffic for specified addresses.

These answers utilize standard Firebox management features for performing administrative and diagnostic tasks efficiently. Let me know if you need further assistance with Firebox System Manager capabilities.

NEW QUESTION # 38

.....

In this fast-changing world, the requirements for jobs and talents are higher, and if people want to find a job with high salary they must boost varied skills which not only include the good health but also the working abilities. The Network-Security-Essentials exam torrent is compiled by the experienced professionals and of great value. You can master them fast and easily. We provide varied versions for you to choose and you can find the most suitable version of Network-Security-Essentials Exam Materials. So it is convenient for the learners to master the Locally-Managed Fireboxes questions torrent and pass the exam in a short time.
