## TDA-C01 Valid Exam Duration - TDA-C01 Minimum Pass Score

Compared with other products, one of the advantages of TDA-C01 Exam Braindumps is that we offer you free update for 365 days after purchasing. In this condition, you needn't have to spend extra money for the updated version. You just need to spend some money, so you can get the updated version in the following year. It's quite cost- efficient for you. Besides if we have the updated version, our system will send it to you automatically.

## Tableau Certified Data Analyst Sample Questions (Q156-Q161):

### NEW QUESTION # 156

You have a dashboard that is configured for desktop browsers.

You want to customize a layout for mobile users.

Which option should you select first? (Click the appropriate Option in the Answer Area.)

The screenshot shows the Tableau Layout pane. At the top, there are tabs for 'Dashboard' and 'Layout'. Below the tabs is a 'Device Preview' button. The 'Size' section shows 'Desktop Browser (1000 x 800)'. The 'Sheets' section contains 'Sheet 1'. The 'Objects' section lists various options: 'Horizontal', 'Blank', 'Vertical', 'Navigation', 'Text', 'Download', 'Image', 'Extension', and 'Web Page'. Below these is a 'Layout' section with 'Tiled' and 'Floating' options, where 'Tiled' is selected. At the bottom, there is a checkbox for 'Show dashboard title' and a small icon with the text '+ a b | e a u'.

### Answer:

Explanation:

Explanation:

To customize a layout for mobile users, you should select the Device Preview option first. This option will allow you to see how your dashboard will look on different types of devices, such as phones, tablets, or desktops. You can also choose different models and orientations to preview different screen sizes and resolutions. From the Device Preview mode, you can add, edit, or delete device layouts for each device type.

You can also adjust the size, position, and formatting of the dashboard elements for each device layout. References:

#### NEW QUESTION # 157

You have the following dataset.

Region	Profit	Sales
Central	39706	501240
East	91523	678781
South	46749	391722
West	108418	725458

You need to create the following worksheet.

A screenshot of a Tableau worksheet titled 'Sheet 1'. The worksheet contains a table with columns 'Region', 'Profit', and 'Sales'. The data is the same as the dataset provided. To the right of the table is a 'Parameter 1' menu with three options: 'sales', 'sales', and 'profit'. The 'sales' option is highlighted. A large watermark 'Preppdf.com' is diagonally across the image.

The table must show either profit or sales based on the selection from the Parameter 1 menu.

Which three actions should you perform in orders

(Place the three correct options in order Use the arrows to move Options to Answer Area Use Answer Area arrows to reorder the options)

Options

Drag the calculated field to Detail on the Marks card and add Region to the Columns shelf.

Create a calculated field that uses the following formula:

```
IF [Sales]=[Parameter 1]
THEN 'sales'
ELSEIF [Profit]=[Parameter 1]
THEN 'profit'
END
```

Create a parameter that has list string values of profit and sales. Select Show Parameter

Create a calculated field that uses the following formula:

```
IF [Parameter 1]='sales'
THEN [Sales]
ELSEIF [Parameter 1]='profit'
THEN [Profit]
END
```

Drag the calculated field to Text on the Marks card and add Region to the Rows shelf.

Answer Area

Drag the calculated field to Detail on the Marks card and add Region to the Columns shelf.

Create a calculated field that uses the following formula:

IF [Sales]=[Parameter 1]
THEN 'sales'
ELSEIF [Profit]=[Parameter 1]
THEN 'profit'
END

Create a parameter that has list string values of profit and sales. Select Show Parameter

**Answer:**

Explanation:

Answer Area

Create a parameter that has list string values of profit and sales. Select Show Parameter

Create a calculated field that uses the following formula:

```
IF [Sales]=[Parameter 1]
THEN 'sales'
ELSEIF [Profit]=[Parameter 1]
THEN 'profit'
END
```

Drag the calculated field to Detail on the Marks card and add Region to the Columns shelf.

1 - Create a parameter that has list string values of profit and sales. Select Show Parameter

2 - Create a calculated field that uses the following formula:....

3 - Drag the calculated field to Detail on the Marks card and add Region to the Columns shelf.

### NEW QUESTION # 158

Open the link to Book1 found on the desktop. Open Disciplines worksheet.

Filter the table to show the members of the Top10 set and the members of the Bottom10 set. There should be a total of 20 rows.

### Answer:

Explanation:

Send us your feedback on it

### NEW QUESTION # 159

You have a data source that contains data for every city in the United States. The following is a sample of the data.

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million.

Which type of filter should you use?

- A. Wildcard filter
- **B. Condition filter**
- C. General filter
- D. Top filter

### Answer: B

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New\*" or "\*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:
