The Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam is a valuable credential that is designed to validate the candidates' skills and knowledge level. The Analytics-Admn-201 certification exam is one of the high in demand industrial recognized credentials to prove your skills and knowledge level. With the Salesforce Analytics-Admn-201 Certification Exam everyone can upgrade their skills and become competitive and updated in the market.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server’s interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 2	<ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Topic 3	<ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 4	<ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 5	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.

Pass Guaranteed Quiz Analytics-Admn-201 - Salesforce Certified Tableau Server Administrator –High-quality Test Questions

Our Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) practice exam simulator mirrors the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam experience, so you know what to anticipate on Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam day. Our Salesforce Analytics-Admn-201 Practice Test software features various question styles and levels, so you can customize your Salesforce Analytics-Admn-201 exam questions preparation to meet your needs.

Salesforce Certified Tableau Server Administrator Sample Questions (Q38-Q43):

NEW QUESTION # 38

A user published a workbook ten days ago. The user can see the workbook on the Server, but she is unable to find the workbook by using Search. What should you do to resolve the problem?

- A. Instruct the user to add tags to the workbook
- B. Instruct the user to log out, and then log back in
- C. Instruct the user to re-publish the workbook with keywords
- **D. Run the tsm maintenance reindex-search command**

Answer: D

Explanation:

Tableau Server's search functionality relies on an indexed catalog of content (workbooks, data sources, etc.) stored in the Repository. If a user can see a workbook in the UI (e.g., under Content > Workbooks) but not find it via search, the search index may be outdated or corrupted. This can happen due to:

* Indexing delays after publishing.

* Server maintenance or crashes affecting the index.

* Option D (Run the tsm maintenance reindex-search command): Correct. This command rebuilds the search index, ensuring all content (including the user's workbook) is properly cataloged and searchable. Steps:

* Stop Tableau Server (tsm stop).

* Run tsm maintenance reindex-search.

* Start Tableau Server (tsm start). This is a server administrator task and resolves systemic search issues.

* Option A (Re-publish the workbook with keywords): Incorrect. Re-publishing might update the index for that workbook, but it doesn't fix a broader indexing problem. Keywords enhance relevance, not indexing itself.

* Option B (Add tags to the workbook): Incorrect. Tags improve searchability but don't address an index failure. If the workbook isn't indexed, tags won't help.

* Option C (Log out, and then log back in): Incorrect. This refreshes the user session but doesn't affect the server-side search index. Why This Matters: A reliable search index is critical for content discovery in large deployments-reindex- search ensures consistency. Reference: Tableau Server Documentation - "Reindex Search" (https://help.tableau.com/current/server/en-us/cli_maintenance_tsm.htm#reindex-search).

NEW QUESTION # 39

Which two types of content can you include in comments on a visualization? (Choose two.)

- A. @mentions
- B. Images (jpg, png)
- C. Interactive snapshots of a view
- D. Text

Answer: A,D

Explanation:

Comments on Tableau Server visualizations facilitate collaboration. Let's explore what's supported:

* Comments Feature: Enabled per site (Settings > General > Allow Comments). Users with "Add Comment" permission can post on views.

* Option B (Text): Correct.

* Details: The primary content type-users type free-form text in the comment box.

* Use: Notes, questions, or feedback (e.g., "Sales spiked here-why?").

* Option C (@mentions): Correct.

* Details: Typing @username notifies the mentioned user via email or the UI (if notifications are enabled).

* Use: Directs comments to specific people (e.g., "@John, check this trend").

* Option A (Interactive snapshots of a view): Incorrect.

* Details: Snapshots (static images) aren't supported in comments-users must take screenshots externally and can't embed them interactively.

* Option D (Images - jpg, png): Incorrect.

* Details: No attachment or image embedding in comments-text and mentions only. Workaround:

Link to an image hosted elsewhere.

Why This Matters: Comments enhance teamwork, but their simplicity (text + mentions) keeps the interface lightweight and focused.

Reference: Tableau Server Documentation - "Comment on a View" (<https://help.tableau.com/current/server/en-us/comment.htm>).

NEW QUESTION # 40

A user named John publishes a workbook named Sales Quota to a project named Sales. The All Users group has the View and Download Workbook/Save As capabilities only to the Sales project. A user named Sandy has the Explorer (can publish) site role, on the Sales Quota workbook. No other users or groups have permissions to the Sales project. The Sales project is set to Managed by the owner. What are the effective rights for Sandy?

- A. View and Download Workbook/Save As
- B. The same rights as John
- C. No access
- D. All of the capabilities associated with the Editor role

Answer: A

NEW QUESTION # 41

You activate the same Tableau Server product key on three installations for Dev, Test, and Production. You plan to move the Test environment to new hardware. What is the recommended workflow for managing the product key?

- A. Deactivate the product key on the existing Test environment, and then install and activate Tableau Server on the new hardware
- B. Install and activate Tableau Server on the new hardware, and then deactivate it on the old hardware
- C. Install and activate Tableau Server on the new hardware and keep the existing Test environment as a backup
- D. Install and activate Tableau Server on the new hardware, and then run the following script in the old environment: tableau-

server-obliterate.cmd -y -y -y

Answer: A

Explanation:

Tableau Server's licensing ties product keys to specific machines. Moving an environment requires managing activations to stay compliant. Let's break this down:

* Licensing Rules:

* A product key can be activated on multiple machines (e.g., Dev, Test, Prod), but only up to the licensed limit (typically 3 for such setups).

* Deactivation frees the key for reuse elsewhere.

* Recommended Workflow:

* Deactivate first: Use tsm licenses deactivate on the old Test machine to release the key.

* Then activate: Install on the new hardware and activate with tsm licenses activate -k <key>.

* Why: Ensures compliance and avoids activation conflicts (e.g., exceeding the key's limit).

* Option B (Deactivate on Test, then install/activate on new hardware): Correct.

* Steps:

* On old Test: tsm licenses deactivate.

* Install Tableau Server on new hardware.

* On new Test: tsm licenses activate -k <key>.

* Benefit: Clean, compliant transfer-preserves license integrity.

* Option A (Activate new, then deactivate old): Incorrect.

* Risk: If the key's limit is reached (e.g., 3 activations), the new activation fails until deactivation occurs. Order matters.

* Option C (Activate new, keep old as backup): Incorrect.

* Issue: Exceeds license limit (4 activations) and risks non-compliance. Backup requires deactivation or a separate key.

* Option D (Activate new, obliterate old): Incorrect.

* Details: tableau-server-obliterate.cmd wipes the entire install (data, config)-overkill and doesn't formally deactivate the key via TSM, potentially leaving licensing inconsistent.

Why This Matters: Proper license management prevents activation errors and ensures legal use across environments.

Reference: Tableau Server Documentation - "Manage Product Keys" (https://help.tableau.com/current/server/en-us/license_manage.htm).

NEW QUESTION # 42

What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Every 60 minutes
- B. Whenever a new extract is published
- C. Whenever extracts in the related workbook are refreshed
- D. Every 10 minutes

Answer: A,C

Explanation:

Data-driven alerts notify users when data meets conditions (e.g., sales > \$10K). Let's examine when Tableau checks these:

* Alert Mechanics:

* Enabled per site (Settings > General > Data-Driven Alerts).

* Backgrounder evaluates conditions against extract data.

* Check Intervals: Configurable via tsm configuration set -k dataAlerts.checkIntervalInMinutes (default: 60 minutes).

* Refresh Trigger: Also checks post-extract refresh for immediate updates.

* Option A (Every 60 minutes): Correct.

* Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.

* Config: Adjustable (e.g., -v 30 for 30 minutes).

* Option D (Whenever extracts in the related workbook are refreshed): Correct.

* Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.

* Why: Ensures timely notifications without waiting for the next poll.

* Option B (Every 10 minutes): Incorrect.

* Why: Not the default-possible via config, but not standard.

* Option C (Whenever a new extract is published): Incorrect.

* Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.

Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.

Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 43

.....

Some people want to study on the computer, but some people prefer to study by their mobile phone. Because our Analytics-Admn-201 study torrent can support almost any electronic device, including iPod, mobile phone, and computer and so on. If you choose to buy our Salesforce Certified Tableau Server Administrator guide torrent, you will have the opportunity to use our study materials by any electronic equipment. We believe that our Analytics-Admn-201 Test Torrent can help you improve yourself and make progress beyond your imagination. If you buy our Analytics-Admn-201 study torrent, we can make sure that our study materials will not be let you down
