echo 'fred $USER'
fred fred

- A. fred $USER
- B.
- C. 'fred fred'
- D. fred /home/fred/

- E. 'fred $USER'

Answer: C

NEW QUESTION # 105
You want to the command foo to take its input from the file foobar and send its output to the program bar. Which of the following command lines will do this?

- A. foo | foobar > bar
- B. foo > bar < foobar
- C. foo < foobar | bar
- D. foo < foobar > bar
- E. foo | bar < foobar

Answer: C

NEW QUESTION # 106
When considering the use of hard links, what are valid reasons not to use hard links?

- A. Each hard link has individual ownership, permissions and ACLs which can lead to unintended disclosure of file content
- B. Hard links are not available on all Linux systems because traditional filesystems, such as ext4, do not support them
- C. Hard links are specific to one filesystem and cannot point to files on another filesystem
- D. When a hard linked file is changed, a copy of the file is created and consumes additional space
- E. If users other than root should be able to create hard links, sulnhas to be installed and configured

Answer: C

NEW QUESTION # 107
What is true regarding the command
ls > files
if files do not exist?

- A. An error message is shown and ls is not executed
- B. The output of ls is printed to the terminal
- C. files is created and contains the output of ls
- D. Any output of ls is discarded
- E. The command files is executed and receives the output of ls

Answer: C

Explanation:
The command ls > files uses the output redirection operator > to send the output of the ls command to a file named files. If the file does not exist, it will be created and will contain the output of the ls command, which is the list of files and directories in the current working directory. This is explained in the first web search result 1 and the second web search result 2. References: 1: Input Output & Error Redirection in Linux
[Beginner's Guide] 2: Redirections (Bash Reference Manual)

NEW QUESTION # 108
What does the command mount -a do?

- A. It mounts all filesystems listed in /etc/fstab which have the option noauto set.
- B. It shows all mounted filesystems.
- C. It mounts all filesystems listed in /etc/fstab which have the option auto set.
- D. It mounts all available filesystems onto the current directory.
- E. It mounts all user mountable filesystems for the current user.

Answer: C

Explanation:
Explanation
The command mount -a mounts all filesystems that are listed in the file /etc/fstab and have the option auto set.
The option auto means that the filesystem can be mounted automatically by the mount -a command or at boot time. The option noauto means that the filesystem can only be mounted explicitly by the mount command with the device or mount point specified12.
The file /etc/fstab contains information about the filesystems that are known to the system and how they can be mounted3. The command mount -a is useful for mounting all the filesystems that are needed by the system after a change in /etc/fstab or after a reboot4. References: 1:
mount(8) - Linux man page 2: Linux mount and umount commands help and examples 3: fstab(5) - Linux man page 4: How to Use the mount Command on Linux

NEW QUESTION # 109

......
