

C_BCBTP_2502最新受験攻略、C_BCBTP_2502模擬モード

BONUS!!! Xhs1991 C_BCBTP_2502ダンプの一部を無料でダウンロード: https://drive.google.com/open?id=1C0e22F8Y6e7vAeW_FYq6W7uJ9H6PGBtm

今のインターネット時代に当たり、IT人材としてSAPのC_BCBTP_2502資格証明書を取得できないと、大変なことではないのか? ここで、我が社Xhs1991は一連のC_BCBTP_2502問題集を提供します。あなたはC_BCBTP_2502問題集を購入するかどうかと確認したい、Xhs1991のC_BCBTP_2502デモ版を使用して購入するかと判断します。

C_BCBTP_2502練習教材に興味がある場合は、C_BCBTP_2502試験問題の以前の多くの購入者と連絡を取り、効果的なC_BCBTP_2502練習教材が重要な役割を果たすことの重要性について話し合ったことをお伝えします。準備プロセス。C_BCBTP_2502の実践教材は、実際のC_BCBTP_2502ガイド資料に完全に基づいた有用なコンテンツで、試験の受験者の意欲と効率を維持します。最適なバージョンであるC_BCBTP_2502練習資料には、pdf、ソフトウェア、アプリバージョンの3つのバージョンがあります。

>> C_BCBTP_2502最新受験攻略 <<

一番優秀なC_BCBTP_2502最新受験攻略 & 合格スムーズC_BCBTP_2502模擬モード | 信頼できるC_BCBTP_2502トレーニング

SAPさまざまな顧客がさまざまなニーズを持っていることを考慮して、3つのバージョンのC_BCBTP_2502テストトレントを提供しています。PDFバージョン、PCテストエンジン、およびオンラインテストエンジンバージョンです。ウェブ上のSAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite試験問題の最も有利なデモの1つは、Q&Aの形式でPDFバージョンで書かれており、無料でダウンロードできます。この種類のC_BCBTP_2502試験準備は印刷可能で、ダウンロードにすぐにアクセスできます。つまり、いつでもどこでも勉強できるので、移植性があります。そして、C_BCBTP_2502トレーニングガイドのXhs1991無料デモを試してみると、素晴らしい品質がわかります。

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite 認定 C_BCBTP_2502 試験問題 (Q36-Q41):

質問 #36

What is the key advantage of using SAP Business Application Studio?

- A. Eliminates the need for full-stack development.
- B. Requires on-premise deployment for all applications.
- C. Provides a cloud-native development environment with modern tooling.
- D. Restricts the use of external DevOps integrations.

正解: C

解説:

SAP Business Application Studio (BAS) is the next-generation development environment on SAP BTP, evolving from the previous SAP Web IDE. Its primary advantage lies in providing a cloud-native development environment that mimics a local desktop experience while being accessible entirely via a web browser. It is built on the open-source "Theia" framework (similar to VS Code), which allows developers to use modern tooling, terminal access, and a wide array of extensions tailored specifically for SAP-centric development, such as SAP Fiori, SAP Cloud Application Programming Model (CAP), and mobile development.

Positioning BAS as a core part of the SAP Business Suite ecosystem is crucial because it simplifies the "setup" phase of development. Developers no longer need to configure complex local environments; instead, they use pre-configured "Dev Spaces" optimized for specific business scenarios. This ensures consistency across development teams and streamlines the path from coding to deployment on the SAP BTP Cloud Foundry or Kyma runtimes. By integrating seamlessly with Git for version control and supporting standard DevOps practices, BAS allows enterprises to modernize their development lifecycle, moving away from legacy monolithic structures toward agile, microservices-based extensions that enhance the core SAP landscape without disrupting it.

質問 # 37

Which of the following capabilities does SAP AI Core provide?

- A. Strictly rule-based automation without AI capabilities.
- **B. Predictive analytics and machine learning model deployment.**
- C. Transactional data management for ERP systems.
- D. Hardware infrastructure for AI development.

正解: B

解説:

SAP AI Core is a vital service within the "Intelligent Technologies" pillar of SAP BTP, designed to handle the heavy lifting of artificial intelligence at an enterprise scale. Its primary capability is providing a standardized, highly scalable runtime for predictive analytics and machine learning (ML) model deployment. In the modern SAP Business Suite, "intelligence" is no longer just a buzzword; it is a functional requirement. SAP AI Core allows businesses to take raw data from their systems, train sophisticated models, and then deploy those models into production environments where they can serve real-time predictions.

This service is unique because it supports the full lifecycle of an AI model, including execution and monitoring. It allows developers to integrate AI features into their applications while maintaining "AI Ethics" and transparency, which are critical for enterprise compliance. Unlike standard transactional databases that focus on record-keeping, SAP AI Core focuses on "inference"-using data to generate new insights and automate complex decisions. By positioning SAP AI Core as the engine for intelligence, SAP BTP ensures that organizations can move beyond basic automation toward advanced, self-learning processes that improve over time, such as predictive maintenance in manufacturing or intelligent lead scoring in sales.

質問 # 38

Which SAP BTP product is critical for financial forecasting and analytics?

- **A. SAP HANA Cloud**
- B. SAP Fieldglass
- C. SAP Ariba
- D. SAP Business Network

正解: A

解説:

For financial forecasting to be effective, it requires the ability to process massive amounts of historical and real-time data with extreme speed. SAP HANA Cloud is the critical foundational product on SAP BTP that enables this. As a cloud-native, in-memory database, it allows for the convergence of transactional (OLTP) and analytical (OLAP) processing. This means that finance teams can run complex forecasting models directly on live transactional data without the need for time-consuming data transfers to separate data warehouses.

In the context of the SAP Business Suite, SAP HANA Cloud acts as the "single source of truth." It provides the high-performance data engine required by tools like SAP Analytics Cloud to perform predictive modeling and "what-if" simulations. Whether a company is predicting cash flow, modeling market volatility, or performing year-end consolidations, HANA Cloud ensures that the underlying data is accessible and processed in sub-seconds. This capability is essential for modern finance departments that must move from descriptive analytics (what happened) to predictive and prescriptive analytics (what will happen and what should we do). While Ariba and Fieldglass provide the source data for procurement and contingent labor, it is SAP HANA Cloud that provides the

computational power necessary to turn that data into strategic financial insights.

質問 # 39

Which market trend is driving the adoption of SAP BTP?

- A. Declining use of cloud-based solutions.
- B. Decreasing focus on API-based integrations.
- C. Increased need for data-driven decision-making.
- D. Reduced emphasis on business automation.

正解: C

解説:

One of the most powerful market trends driving the global adoption of SAP BTP is the increased need for data-driven decision-making. In today's hyper-competitive landscape, "gut feeling" is no longer a viable strategy for business leaders. Organizations are sitting on mountains of data, but the challenge lies in extracting actionable insights from it. SAP BTP addresses this trend by providing a unified environment where data management, analytics, and AI converge. This allows businesses to transform raw data into a strategic asset, enabling more accurate forecasting, optimized operations, and enhanced customer experiences. This trend is further accelerated by the "Digital Transformation" movement, where companies are moving away from monolithic, isolated systems toward agile, interconnected platforms. Businesses now demand real-time visibility across their entire value chain, from procurement to sales. SAP BTP's ability to integrate disparate systems and provide a "single source of truth" through SAP HANA Cloud and SAP Analytics Cloud directly addresses this market demand. As companies strive to become "Intelligent Enterprises," they rely on BTP to provide the technical infrastructure that supports continuous innovation, rapid automation, and the ability to pivot their business models based on data-driven evidence rather than historical assumptions.

質問 # 40

Which of the following are key features of SAP BTP's Integration Suite? (Choose two).

- A. Prebuilt connectors for SAP and third-party applications.
- B. Manual data processing with no automation.
- C. Restricted integration to SAP-only services.
- D. Built-in API management for secure data exchange.

正解: A、D

解説:

The SAP Integration Suite is designed to handle the complexities of a hybrid and heterogeneous IT landscape.

One of its most significant features is the availability of thousands of prebuilt connectors and integration flows for both SAP and third-party applications (such as Salesforce, ServiceNow, and various government portals). These "accelerators" significantly reduce the time and cost associated with integration projects, as developers do not have to build connections from scratch. This allows businesses to achieve a faster "time-to-value" when expanding their digital ecosystem.

Another critical feature is built-in API management. As enterprises move toward microservices and cloud-native applications, the number of APIs (Application Programming Interfaces) increases exponentially. SAP Integration Suite provides a centralized layer to govern, secure, and monitor these APIs. This ensures that data exchange between systems is not only efficient but also highly secure, protecting the enterprise from unauthorized access or data breaches. By combining prebuilt content with robust API governance, SAP BTP enables organizations to create a "composable enterprise" where different systems can be easily connected and reconfigured to meet changing business needs, moving away from the rigid, manual processes of the past.
