Are you worried about where to find reliable and valid 312-38 practice exam cram? Please stop hunting with aimless, EC-COUNCIL 312-38 free study dumps will help you and solve your problems. If you still have doubts, you can download 312-38

free demo to have a try. If you have any questions about 312-38 Study Tool, please contact us by email or chat with our online customer service, we will always here to answers your questions. Our 312-38 test practice will enhance your professional skills and expand your knowledge, which will ensure you a define success in our 312-38 actual test.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q626-Q631):

NEW QUESTION # 626

Fill in the blank with the appropriate term. A _____ is a set of tools that take Administrative control of a computer system without authorization by the computer owners and/or legitimate managers.

Answer:

Explanation:
rootkit

NEW QUESTION # 627

Which of the following protocols is used for routing of voice conversation over the Internet?

- **A. VoIP**
- B. DHCP
- C. IP
- D. DNS

Answer: A

NEW QUESTION # 628

Timothy works as a network administrator in a multinational organization. He decides to implement a dedicated network for sharing storage resources. He uses a _____ as it seperates the storage units from the servers and the user network.

- **A. SAN**
- B. SCSA
- C. SAS
- D. NAS

Answer: A

NEW QUESTION # 629

Which of the following is a digital telephone/telecommunication network that carries voice, data, and video over an existing telephone network infrastructure?

- A. PPP
- **B. ISDN**
- C. X.25
- D. Frame relay

Answer: B

Explanation:

Integrated Services Digital Network (ISDN) is a digital telephone/telecommunication network that carries voice, data, and video over an existing telephone network infrastructure. It requires an ISDN modem at both the ends of a transmission. ISDN is designed to provide a single interface for hooking up a telephone, fax machine, computer, etc. ISDN has two levels of service, i.e., Basic Rate Interface (BRI) and Primary Rate Interface (PRI). Answer option A is incorrect. The Point-to-Point Protocol, or PPP, is a data link protocol commonly used to establish a direct connection between two networking nodes. It can provide connection authentication, transmission encryption privacy, and compression. PPP is commonly used as a data link layer protocol for connection over synchronous and asynchronous circuits, where it has largely superseded the older, non-standard Serial Line Internet Protocol (SLIP) and telephone company mandated standards (such as Link Access Protocol, Balanced (LAPB) in the X.25 protocol suite). PPP

was designed to work with numerous network layer protocols, including Internet Protocol (IP), Novell's Internetwork Packet Exchange (IPX), NBF, and AppleTalk. Answer option D is incorrect. The X.25 protocol, adopted as a standard by the Consultative Committee for International Telegraph and Telephone (CCITT), is a commonly-used network protocol. The X.25 protocol allows computers on different public networks (such as CompuServe, Tymnet, or a TCP/IP network) to communicate through an intermediary computer at the network layer level. X.25's protocols correspond closely to the data-link and physical-layer protocols defined in the Open Systems Interconnection (OSI) communication model. Answer option B is incorrect. Frame relay is a telecommunication service designed for cost-efficient data transmission for intermittent traffic between local area networks (LANs) and between end-points in a wide area network (WAN). Frame relay puts data in a variable-size unit called a frame. It checks for lesser errors as compared to other traditional forms of packet switching and hence speeds up data transmission. When an error is detected in a frame, it is simply dropped. The end points are responsible for detecting and retransmitting dropped frames.

NEW QUESTION # 630

David, a network and system admin, encrypted all the files in a Windows system that supports NTFS file system using Encrypted File Systems (EFS). He then backed up the same files into another Windows system that supports FAT file system. Later, he found that the backup files were not encrypted. What could be the reason for this?

- A. EFS is not the encryption system used in Windows
- B. FAT files cannot be encrypted
- C. EFS could only encrypt the files that follow NTFS
- D. Copied files lose their encryption

Answer: C

Explanation:

The Encrypting File System (EFS) is a feature of the NTFS file system that provides encryption at the file system level. It is designed to work specifically with NTFS and does not support the FAT file system. When files encrypted with EFS are copied or backed up to a volume that uses the FAT file system, the encryption is lost because FAT does not support EFS encryption. This is why David found that the backup files were not encrypted after transferring them to a system that supports the FAT file system.

References: The explanation is based on the operational characteristics of EFS and its compatibility with different file systems as described in the Certified Network Defender (CND) course materials and further supported by information from reliable sources on EFS and file system encryption¹²³⁴.

NEW QUESTION # 631

.....

These mock tests are specially built for you to assess what you have studied. These 312-38 Practice Tests are customizable, which means you can change the time and questions according to your needs. You can even access your previously given tests from the history, which helps you to overcome mistakes while giving the actual test next time.
