Snowflake SnowPro Advanced: Data Engineer Certification Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

A data engineer is using an AWS Glue ETL job to remove outdated customer records from a table that contains customer account information. The data engineer is using the following SQL command to remove customers that exist in a table named `monthly_accounts_update` table from the customer accounts table:

```
MERGE INTO accounts t USING monthly_accounts_update s
ON t.customer = s.customer
WHEN MATCHED
THEN DELETE
```

What will happen when the data engineer runs the SQL command?

- A. All customer records that exist in both the customer accounts table and the `monthly_accounts_update` table will be deleted from the accounts table.
- B. No records will be deleted because the command syntax is not valid in AWS Glue.
- C. Only customer records that are present in both tables will be retained in the customer accounts table.
- D. The `monthly_accounts_update` table will be deleted.

Answer: A

Explanation:

That MERGE statement deletes every row in `accounts` where the customer value matches a row in `monthly_accounts_update`. All overlapping customer records will be removed from the accounts table.

NEW QUESTION # 32

Which is the non-supportable JavaScript UDF data types?

- B. String
- C. Double
- D. Integers

Answer: D

NEW QUESTION # 33

Can Masking policies be applied to virtual columns?

- A. FALSE
- B. TRUE

Answer: A

NEW QUESTION # 34

A data engineer needs to use an Amazon QuickSight dashboard that is based on Amazon Athena queries on data that is stored in an Amazon S3 bucket. When the data engineer connects to the QuickSight dashboard, the data engineer receives an error message that indicates insufficient permissions.

Which factors could cause to the permissions-related errors? (Choose two.)

- **A. QuickSight does not have access to decrypt S3 data.**
- B. The Athena tables are not cataloged.
- C. There is no connection between QuickSight and Athena.
- D. There is no IAM role assigned to QuickSight.
- **E. QuickSight does not have access to the S3 bucket.**

Answer: A,E

NEW QUESTION # 35

Which stages support external tables?

- A. External stages only, only on the same region and cloud provider as the Snowflake account
- B. internal stages only from any Snowflake account in the organization
- **C. External stages only from any region, and any cloud provider**
- D. Internal stages only; within a single Snowflake account

Answer: C

Explanation:

Explanation

External stages only from any region, and any cloud provider support external tables. External tables are virtual tables that can query data from files stored in external stages without loading them into Snowflake tables. External stages are references to locations outside of Snowflake, such as Amazon S3 buckets, Azure Blob Storage containers, or Google Cloud Storage buckets. External stages can be created from any region and any cloud provider, as long as they have a valid URL and credentials. The other options are incorrect because internal stages do not support external tables. Internal stages are locations within Snowflake that can store files for loading or unloading data. Internal stages can be user stages, table stages, or named stages.
