Valid Test PAP-001 Tips | PAP-001 Cost Effective Dumps

Our company has done the research of the PAP-001 study material for several years, and the experts and professors from our company have created the famous PAP-001 study materials for all customers. We believe our PAP-001 training braidump will meet all demand of all customers. If you long to pass the exam and get the certification successfully, you will not find the better choice than our PAP-001 Preparation questions. You can free download the demo of our PAP-001 exam questions to check the excellent quality on our website.

Ping Identity Certified Professional - PingAccess Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which two protocols does PingAccess use for authentication and authorization? (Choose 2 answers.)

- A. SAML
- B. WS-Trust
- C. **OIDC**
- D. **OAuth2**
- E. WS-Fed

Answer: C,D

Explanation:

PingAccess is designed to work with modern identity protocols. It does not support legacy WS-* protocols directly.

Exact Extract:

"PingAccess integrates with OAuth 2.0 and OpenID Connect (OIDC) to provide authentication and authorization for web and API resources."

* Option A (SAML) is incorrect - PingAccess does not natively consume SAML assertions; SAML can be used indirectly via PingFederate.

* Option B (WS-Fed) is not supported.

* Option C (WS-Trust) is not supported.

* Option D (OAuth2) is correct - used for authorization and token validation.

* Option E (OIDC) is correct - used for user authentication and sessions.

Reference: PingAccess Administration Guide - Supported Protocols

NEW QUESTION # 22

An administrator needs to add a set of rules to an application protected by a PingAccess agent. Which rule will be unavailable to add to the application?

- A. Cross-Origin Request
- B. **Rewrite Cookie Domain**
- C. Rate Limiting
- D. Network Range

Answer: B

Explanation:

PingAccess distinguishes between gateway rules and agent rules. Some processing rules, such as Rewrite Cookie Domain, only apply when PingAccess is acting as a reverse proxy (gateway), not when protecting applications via agents.

Exact Extract:

"Rewrite Cookie Domain rules are not supported for agent applications. They are only available for proxied (gateway) applications."

* Option A (Rewrite Cookie Domain) is correct - unavailable with agent applications.

* Option B (Network Range) is available for both agents and gateways.

* Option C (Rate Limiting) is supported on both application types.

* Option D (Cross-Origin Request) is also supported in both.

Reference: PingAccess Administration Guide - Agent vs. Gateway Rules

NEW QUESTION # 23

Anycompany has several applications that need to load images and fonts from www.anycompany.com. Users are currently getting CORS errors. How should the Cross-Origin Request rule be set to allow secure access?

- A. **Allowed Origins to www.anycompany.com and enable the Allow Credentials option**
- B. Allowed Origins value for each of the listed domains
- C. Allowed Origins to *.anycompany.com and disable the Allow Credentials option
- D. Allowed Origins to * and enable the Allow Credentials option

Answer: A

Explanation:

To prevent CORS errors, administrators must configure a Cross-Origin Request (CORS) Processing Rule.

The secure practice is to allow the specific trusted domain (www.anycompany.com) and, when cookies or credentials are required, to

enableAllow Credentials.

Exact Extract:

"For secure CORS, specify exact origins rather than wildcards. Enable 'Allow Credentials' when client-side resources must include cookies or authentication data."

* Option A is incomplete - multiple values are possible, but in this case only `www.anycompany.com` is required.

* Option B is less secure - using a wildcard (`*.anycompany.com`) broadens exposure unnecessarily.

* Option C is insecure - `*with credentials` is disallowed by CORS specifications.

* Option D is correct - restricts access to the trusted domain and allows credentialed requests.

Reference: PingAccess Administration Guide - Cross-Origin Request Rule

NEW QUESTION # 24

An administrator needs to configure a protected web application using the Authorization Code login flow.

Which two configuration parameters must be set? (Choose 2 answers.)

- A. OpenID Connect Login Type
- B. OAuth Client ID
- C. OAuth Token Introspection Endpoint
- D. Virtual Host
- E. OpenID Connect Issuer

Answer: A,B

Explanation:

When using the Authorization Code Flow for authentication, PingAccess must be configured with:

* An OAuth Client ID that identifies the application to the IdP.

* The OpenID Connect Login Type set to Authorization Code.

Exact Extract:

"When configuring an OIDC web session, specify the OAuth client ID and select the OpenID Connect login type (Authorization Code, Hybrid, or Implicit)."

* Option A (OAuth Token Introspection Endpoint) is not required for Authorization Code flow - token introspection is used in other cases.

* Option B (OAuth Client ID) is correct - required for OIDC authorization requests.

* Option C (OpenID Connect Issuer) is discovered automatically via metadata when you configure the token provider.

* Option D (Virtual Host) is required for application exposure but not specific to OIDC flow.

* Option E (OpenID Connect Login Type) is correct - must be set to "Authorization Code." Reference: PingAccess Administration Guide - Configuring OIDC Web Sessions

NEW QUESTION # 25

Which two options can be changed in the `run.properties` file? (Choose 2 answers.)

- A. Logging levels
- B. URL for heartbeat endpoint
- C. Default logs location
- D. X-Frame-Options header
- E. Operational mode for PingAccess

Answer: A,E

Explanation:

The `run.properties` file in PingAccess is the primary configuration file that defines system-level runtime behavior. According to PingAccess documentation:

* Exact Extract:

"The `run.properties` file contains configuration properties for PingAccess, including operational mode, logging levels, admin authentication fallback, cluster settings, and system defaults." (PingAccess Administrator's Guide - `run.properties` Reference) From this, we can determine:

* C. Operational mode for PingAccess#Correct The property `pa.operational.mode` in `run.properties` defines whether the node operates as `STANDALONE`, `CLUSTERED_CONSOLE`, `CLUSTERED_CONSOLE_REPLICA`, or `CLUSTERED_ENGINE`. This is one of the core configurable options.

* E. Logging levels#Correct Properties such as `log.level` and other logging configurations are explicitly defined in `run.properties`,

allowing administrators to adjust the verbosity of logs (DEBUG, INFO, WARN, ERROR).

Why the others are incorrect:

* A. Default logs location#IncorrectThe log file path is not controlled via `run.properties`. It is defined in `log4j2.xml`, not `inrun.properties`.

* B. URL for heartbeat endpoint#IncorrectThe heartbeat endpoint (`/pa/heartbeat.ping`) is a fixed system endpoint and is not configurable in `run.properties`.

* D. X-Frame-Options header#IncorrectSecurity headers like `X-Frame-Options` are managed under application security policies or global response headers, not `inrun.properties`.

Reference: PingAccess Administrator's Guide - `run.properties` Reference (section describing `pa.operational.mode` and logging configuration properties).

NEW QUESTION # 26

.....

Let me be clear here a core value problem of ITExamDownload. All Ping Identity exams are very important. In this era of rapid development of information technology, ITExamDownload just one of the questions providers. Why do most people to choose ITExamDownload ? Because the ITExamDownload exam information will be able to help you pass the test. It provides the information which is up to date. With ITExamDownload Ping Identity PAP-001 Test Questions, you will become full of confidence and not have to worry about the exam. However, it lets you get certified effortlessly.

Valid Test PAP-001 Tips: <https://www.itexamdownload.com/PAP-001-valid-questions.html>

Our Certified Professional - PingAccess (PAP-001) PDF file is portable which means customers can carry this real questions document to any place, Perhaps the few qualifications you have on your hands are your greatest asset, and the PAP-001 test prep is to give you that capital by passing exam fast and obtain certification soon, And you can look at the data on our website, the hot hit of our PAP-001 training guide can prove how popular it is!

The Influencing Process, Allows the client to see the request it made to the server, Our Certified Professional - PingAccess (PAP-001) PDF file is portable which means customers can carry this real questions document to any place.

ITExamDownload PAP-001 Exam Questions Demo Available To Download Free of Cost

Perhaps the few qualifications you have on your hands are your greatest asset, and the PAP-001 Test Prep is to give you that capital by passing exam fast and obtain certification soon.

And you can look at the data on our website, the hot hit of our PAP-001 training guide can prove how popular it is, Meanwhile, we provide the wonderful service before and after the sale to let you have a good understanding of our PAP-001 study materials.

Ping Identity PAP-001 exam success with Flying Colors is waiting for you so don't wait and choose ITExamDownload Ping Identity PAP-001 exam dumps to get the desired grades in a single attempt.
