## Quiz 2026 ACD201: Appian Senior Developer Fantastic New Practice Materials

Our ACD201 exam questions have a lot of advantages. First, our ACD201 practice materials are reasonably priced with accessible prices that everyone can afford. Second, they are well-known in this line so their quality and accuracy is unquestionable that everyone trusts with confidence. Third, our ACD201 Study Guide is highly efficient that you have great possibility pass the exam within a week based on regular practice attached with the newest information.

### Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.</li> </ul>

## Appian Senior Developer Sample Questions (Q65-Q70):

### NEW QUESTION # 65

You need to write an expression to retrieve a list of all account managers who don't currently have an active customer account. Which code snippet should you use?

- A.

```

a!localVariables(
  local!customers: {
    rule!getAllDomesticCustomers(),
    rule!getAllInternationalCustomers()
  },
  local!accountManagers: rule!getAccountManagersByRegionAndVertical(
    regions: rule!getAllRegions(),
    verticals: rule!getAllVerticals()
  ),
  local!AMsWithoutAccounts: difference(local!accountManagers, local!customers.manager),
  a!forEach(
    items: local!AMsWithoutAccounts,
    expression: rule!displayUserName(fv!item)
  )
)

```

```

a!localVariables(
  local!domesticCustomers: rule!getAllDomesticCustomers(),
  local!internationalCustomers: rule!getAllInternationalCustomers(),
  local!customers: a!flatten(
    {
      local!domesticCustomers,
      local!internationalCustomers
    }
  ),
  local!customerManagers: index(local!customers, "manager", null),
  local!accountManagers: rule!getAccountManagersByRegionAndVertical(
    regions: rule!getAllRegions(),
    verticals: rule!getAllVerticals()
  ),
  local!AMsWithoutAccounts: reject(
    fn!isnull,
    a!forEach(
      items: local!accountManagers,
      expression: if(
        contains(local!customerManagers, fv!item),
        null,
        fv!item
      )
    )
  ),
  a!forEach(
    items: local!AMsWithoutAccounts,
    expression: rule!displayUserName(fv!item)
  )
)

```

- B.
- C.

```

a!localVariables(
  local!domesticCustomers: rule!getAllDomesticCustomers(),
  local!internationalCustomers: rule!getAllInternationalCustomers(),
  local!customers: a!flatten({local!domesticCustomers,local!internationalCustomers}),
  local!customerManagers: index(local!customers,"manager",null),
  local!accountManagers: rule!getAccountManagersByRegionAndVertical(
    regions: rule!getAllRegions(),
    verticals: rule!getAllVerticals()
  ),
  local!AMsWithoutAccounts: difference(local!accountManagers, local!customerManagers),
  a!forEach(
    items: local!AMsWithoutAccounts,
    expression: rule!displayUserName(fv!item)
  )
)

```

**Answer: A**

Explanation:

Chosen snippet uses the difference() function to efficiently get all account managers who are not currently managers of any customer account. It directly compares local!accountManagers to local!customers.manager, resulting in a concise and optimal solution for retrieving account managers without an active customer account.

#### NEW QUESTION # 66

You're the administrator of your insurance company's case management system. You need to limit insurance agents to only those clients to which they have been assigned.

Which two statements must be true for one way to configure Record-Level security for the Customer record? (Choose two.)

- A. Data sync should be enabled.
- **B. A new record-level security rule should be created using the Users found in fields option to specify that if a user is found in the "assignedAgent" field (which is a type User), then they can see their cases.**
- **C. A condition should be added to the record-level security rule to specify which cases specifically named agents can access.**
- D. Record-level security means agents must have permission to view the record type and permission to edit the records.

**Answer: B,C**

Explanation:

Creating a record-level security rule using the "Users found in fields" option ensures agents only see records assigned to them through the "assignedAgent" field.

Adding a condition to the rule further refines which records (cases) each agent can access, implementing precise record-level security.

#### NEW QUESTION # 67

You're designing an expression rule that needs to retrieve employees from a database for a given department and display their full name concatenated with their role in a list for a dropdown field.

Which design approach should you recommend?

- **A. Query the data with a filter applied to only return employees for the given department. Using a!forEach(), for each item in the list, return the employee name and role.**
- B. Query the data to return all employees. Use wherecontains() to return the employees for the given department and use a!forEach() to return the employee name and role for each item in the list.
- C. Query the data to return all employees. Using a!forEach(), for each item in the list, if the employee belongs to the given department, return the employee name and role, otherwise, return a null value.

**Answer: A**

Explanation:

Querying the data with a filter to return only employees for the given department is the most efficient approach. Then, using a!forEach() to concatenate and return the employee name and role meets the dropdown display requirement without unnecessary processing.

### NEW QUESTION # 68

You're developing a user input form for a financial services application.

One component of this form requires you to embed an external site (in the form of a URL) that can receive inputs from Appian and return updates as the user interacts with it.

What should you do?

- A. Use a component plug-in to achieve interaction with the embedded site, because this use case requires input-output or event parameters.
- B. Use the Appian out-of-the-box Web Content Component. It can display content from a URL and provide both additional inputs, or receive updates as the user interacts with the embedded site.
- C. Use an integration to achieve interaction with the embedded site while displaying information in the Appian out-of-the-box Web Content Component. That way you can refresh for updates and interact with the site.

**Answer: A**

Explanation:

A component plug-in is required because the standard Web Content Component in Appian only displays external sites and does not support direct two-way interaction or input/output event handling. A plug-in enables custom integration to allow input and receive updates as users interact with the embedded site.

### NEW QUESTION # 69

You need to update an existing Appian application.

The application needs to be responsive and compatible with a variety of screen widths. For example: phone/tablet browser, Appian mobile app, desktop monitor.

Which two functions/parameters should you consider when updating the interfaces? (Choose two.)

- A. `a!isNativeMobile()`
- B. `stackWhen in Columns Layout and Side By Side Layout`
- C. Width of a page in the site object
- D. `a!isPageWidth()`

**Answer: A,B**

Explanation:

The `stackWhen` parameter in layout components helps interfaces adapt to different screen sizes by controlling when columns or side-by-side layouts stack vertically.

The `a!isNativeMobile()` function detects if the interface is being viewed on a native mobile app, allowing you to tailor the interface for mobile responsiveness.

### NEW QUESTION # 70

.....

Our ACD201 practice torrent offers you more than 99% pass guarantee, which means that if you study our ACD201 materials by heart and take our suggestion into consideration, you will absolutely get the ACD201 certificate and achieve your goal. Meanwhile, if you want to keep studying this course, you can still enjoy the well-rounded services by ACD201 Test Prep, our after-sale services can update your existing ACD201 study materials within a year and a discount more than one year.
