100% Pass Quiz Authoritative Confluent - Reliable CCAAK Test Braindumps

P.S. Free & New CCAAK dumps are available on Google Drive shared by FreeDumps: https://drive.google.com/open?id=1qubHf1q2BBmwyhjr1BSEhKHv_Tw4gf6Y

With our Confluent CCAAK exam questions material, we promise your success in Confluent certification. We guarantee that if you study completely from our practice Confluent CCAAK exams, you will pass your Confluent CCAAK exam with flying colors on the first try.If you are pressed for time when studying for the Confluent Certified Administrator for Apache Kafka PDF Questions and working several jobs, PDF format is the ideal option. Because the FreeDumps follows every bit of the official Confluent Certified Administrator for Apache Kafka exam syllabus to compile the most relevant Confluent Exam Questions and answers with a 100% chance of appearing in the actual Confluent Certified Administrator for Apache Kafka exam. The Confluent CCAAK PDF file does not require any installation and is equally suitable for PCs, mobile devices, and tablets. Using a smartphone, you may go through the Confluent CCAAK exam questions whenever and wherever you desire. The CCAAK PDF files are also printable for making handy notes.

We have chosen a large number of professionals to make CCAAK learning question more professional, while allowing our study materials to keep up with the times. Of course, we do it all for you to get the information you want, and you can make faster progress. You can also get help from CCAAK Exam Training professionals at any time. We can be sure that with the professional help of our CCAAK test guide you will surely get a very good experience. Good materials and methods can help you to do more with less. Choose CCAAK test guide to get you closer to success!

CCAAK Latest Test Braindumps | Accurate CCAAK Test

For the Confluent Certified Administrator for Apache Kafka (CCAAK) web-based practice exam no special software installation is required. because it is a browser-based Confluent Certified Administrator for Apache Kafka (CCAAK) practice test. The web-based Confluent Certified Administrator for Apache Kafka (CCAAK) practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows. In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based Confluent CCAAK Practice Test.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q22-Q27):

NEW QUESTION # 22
You are managing a Kafka cluster with five brokers (broker id '0', '1','2','3','4') and three ZooKeepers. There are 100 topics, five partitions for each topic, and replication factor three on the cluster. Broker id '0' is currently the Controller, and this broker suddenly fails.
Which statements are correct? (Choose three.)

- A. The Controller uses the epoch number to prevent a split brain scenario.
- B. The number of Controllers should always be equal to the number of brokers alive in the cluster.
- C. The Controller is responsible for electing Leaders among the partitions and replicas.
- D. Kafka uses ZooKeeper's ephemeral node feature to elect a controller.
- E. The broker id is used as the epoch number to prevent a split brain scenario.
- F. The Controller is responsible for reassigning partitions to the consumers in a Consumer Group.

Answer: A,C,D

Explanation:
Kafka relies on ZooKeeper's ephemeral nodes to detect if a broker (controller) goes down and to elect a new controller.
The controller manages partition leadership assignments and handles leader election when a broker fails.
The epoch number ensures coordination and avoids outdated controllers acting on stale data.

NEW QUESTION # 23
Per customer business requirements, a system's high availability is more important than message reliability.
Which of the following should be set?

- A. The number of brokers in the cluster should be always odd (3, 5. 7 and so on).
- B. Unclean leader election should be enabled.
- C. The linger.ms should be set to '0'.
- D. Message retention.ms should be set to -1.

Answer: B

Explanation:
Enabling unclean leader election allows Kafka to elect a non-in-sync replica as leader if all in-sync replicas are unavailable. This sacrifices message reliability (possible data loss) in favor of high availability, aligning with the requirement.

NEW QUESTION # 24
What is the correct permission check sequence for Kafka ACLs?
What is the correct permission check sequence for Kafka ACLs?

- A. Super Users -> Allow ACL -> Deny ACL-> Deny
- B. Super Users -> Deny ACL -> Allow ACL -> Deny
- C. Deny ACL -> Deny -> Allow ACL -> Super Users
- D. Allow ACL -> Deny ACL -> Super Users -> Deny

Answer: A

Explanation:
Kafka checks permissions in the following sequence:
1. Super Users: If the user is a super user (defined via super.users), access is granted immediately.
2. Allow ACL: If there is a matching Allow ACL, Kafka proceeds to the next step.
3. Deny ACL: If there is a matching Deny ACL, access is denied (even if an Allow exists).
4. Deny: If no matching ACLs are found, access is denied by default.
This order ensures that super users bypass ACLs, denials override allows, and default is deny.

NEW QUESTION # 25
A broker in the Kafka cluster is currently acting as the Controller.
Which statement is correct?

- A. It is given precedence for replication to and from replica followers.
- B. All consumers are allowed to fetch messages only from this server.
- C. It is responsible for sending leader information to all producers.
- D. It can have topic partitions.

Answer: D

Explanation:
The Controller broker is a regular broker that also takes on additional responsibilities for managing cluster metadata, such as leader elections and partition assignments. It still hosts topic partitions and participates in replication like any other broker.

NEW QUESTION # 26
When using Kafka ACLs, when is the resource authorization checked?

- A. Each time the resource is accessed.
- B. Each time the resource is accessed within the configured authorization interval.
- C. When the client connection is first established.
- D. The initial time the resource is accessed.

Answer: A

Explanation:
Kafka ACLs (Access Control Lists) perform authorization checks every time a client attempts to access a resource (e.g., topic, consumer group). This ensures continuous enforcement of permissions, not just at connection time or intervals. This approach provides fine-grained security, preventing unauthorized actions at any time during a session.

NEW QUESTION # 27
......

Confluent - CCAAK High Hit-Rate Reliable Test Braindumps

We attach importance to candidates' needs and develop the CCAAK useful test files from the perspective of candidates, and we sincerely hope that you can succeed with the help of our practice materials.

The Confluent Certified Administrator for Apache Kafka (CCAAK) dumps PDF format is appropriate for laptops, smartphones, and tablets, After taking the online mock tests, you will receive a mock test score result.

You should click No if you are having CCAAK Latest Test Braindumps a problem with the software or wish to make a feature request.
