Test your knowledge of the DevOps-Foundation exam dumps with Peoplecert DevOps-Foundation practice questions. The software is designed to help with DevOps-Foundation exam dumps preparation. DevOps-Foundation practice test software can be used on devices that range from mobile devices to desktop computers. We provide the DevOps-Foundation Exam Questions in a variety of formats, including a web-based practice test, desktop practice exam software, and downloadable PDF files.

Peoplecert DevOps-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Core DevOps Principles: This section of the exam measures the skills of IT operations specialists and covers essential DevOps principles such as the Three Ways, the Theory of Constraints, and Chaos Engineering. It also introduces the concept of learning organisations, showing how systemic thinking supports continuous improvement.
Topic 2	<ul style="list-style-type: none"> Measurement, Metrics, and Reporting: This section of the exam measures the skills of DevOps engineers and covers metrics that help monitor and evaluate the performance of DevOps practices. Topics include speed, quality, culture, change lead time, cycle time, and the use of dashboards, value-driven metrics, and AIOps in reporting and decision-making.
Topic 3	<ul style="list-style-type: none"> Culture, Behaviours, Operating Models: This section of the exam measures the skills of DevOps engineers and covers how to assess and evolve organisational culture in relation to DevOps transformation. It includes concepts such as Cultural Debt, Behavioural Models, and Organisational Maturity, helping professionals understand team dynamics and readiness for change.
Topic 4	<ul style="list-style-type: none"> Sharing, Shadowing and Evolving: This section of the exam measures the skills of IT operations specialists and covers the collaborative and adaptive elements of DevOps in enterprise settings. It explores leadership, typical barriers and risks, and outlines how organisations can evolve their DevOps practices through continuous learning, peer shadowing, and experience-based transformation.
Topic 5	<ul style="list-style-type: none"> Exploring DevOps: This section of the exam measures the skills of DevOps engineers and covers the foundations of DevOps, including its emergence as a critical discipline in the digital era. It introduces learners to the basic purpose, evolution, and significance of DevOps in modern software and infrastructure environments.

Topic 6	<ul style="list-style-type: none"> • Key DevOps Practices: This section of the exam measures the skills of DevOps engineers and covers core DevOps practices including Continuous Integration, Continuous Testing, Continuous Delivery, and Continuous Deployment. It explores concepts such as Site Reliability Engineering, DevSecOps, Value Stream Management, Platform Engineering, and modern practices like ChatOps and observability.
Topic 7	<ul style="list-style-type: none"> • Automation, Architecting DevOps Toolchains: This section of the exam measures the skills of IT operations specialists and covers key automation principles within the DevOps toolchain. It focuses on CI • CD pipelines, Infrastructure as Code, containerisation, cloud-native architecture, platform engineering, and emerging technologies like Machine Learning and Generative AI in DevOps contexts.

Quiz 2026 DevOps-Foundation: PeopleCert DevOps Foundation v3.6 Exam Latest Exam Questions Answers

Thanks to modern technology, learning online gives people access to a wider range of knowledge, and people have got used to convenience of electronic equipment. As you can see, we are selling our DevOps-Foundation learning guide in the international market, thus there are three different versions of our DevOps-Foundation exam materials: PDF, Soft and APP versions. It is worth mentioning that, the simulation test of our DevOps-Foundation Study Guide is available in our software version. With the simulation test, all of our customers will get accustomed to the DevOps-Foundation exam easily, and pass the exam with confidence.

Peoplecert PeopleCert DevOps Foundation v3.6 Exam Sample Questions (Q79-Q84):

NEW QUESTION # 79

An organization currently manages projects using traditional waterfall methods. ITIL processes are equally rigorous. A new CIO has been hired to increase IT performance and introduce DevOps practices.

Initially, which of the following would be critical success factors for DevOps?

- A. Management commitment to culture change
- B. Both B and C
- C. Forming a pilot DevOps team
- D. Application of agile and lean methods

Answer: B

Explanation:

Both B and C (Application of agile and lean methods + Management commitment to culture change) are critical success factors when launching DevOps in a traditional IT organization.

* Agile/Lean methods: Accelerate delivery, reduce waste, create feedback.

* Management commitment to culture change: Essential for breaking silos, changing behaviors, and making DevOps sustainable.

Forming a pilot team (A) helps, but isn't sufficient without these foundations.

Extract-style reference:

"DevOps success starts with leadership commitment to cultural change and adopting Agile and Lean principles throughout the organization."

-DevOps Handbook, State of DevOps Report

PeopleCert DevOps Foundation v3.6: Lists cultural commitment and Lean/Agile as prerequisites for DevOps transformation.

NEW QUESTION # 80

Several members of an IT service provider's development and operations teams recently attended a local DevOps meetup. They came away very excited about applying a DevOps approach to their organization.

Which of the following would be a critical success factor for their DevOps program?

- A. Additional budget for new automation
- B. Reorganization of the IT organization into DevOps Teams
- C. Management commitment to culture change

- D. The design and development of a deployment pipeline for continuous integration and continuous delivery

Answer: C

Explanation:

Successful DevOps transformation hinges on management commitment to cultural change. This includes leadership support for breaking down silos, encouraging collaboration, fostering psychological safety, and aligning incentives.

While budget, reorganization, and deployment pipelines are important enablers, they cannot deliver sustainable transformation without cultural alignment. Leaders must model desired behaviors, remove systemic blockers, and reinforce the new ways of working.

Without cultural change, DevOps becomes a tooling initiative rather than a true organizational shift.

NEW QUESTION # 81

Which statement about DevOps toolchains is CORRECT? They:

- A. Should be standardized across applications
- B. Require open source tools
- C. Automate continuous testing activities
- **D. Automate tasks in a deployment pipeline**

Answer: D

Explanation:

A DevOps toolchain is designed to automate repetitive tasks across the software delivery process. This includes compiling code, running tests, building artifacts, deploying to environments, and monitoring systems.

While a toolchain can automate continuous testing (D), that is only one of many tasks automated.

Standardization (B) is beneficial but not always required-some applications may need specialized tools.

Open source tools (C) are not mandatory; many organizations use a mix of open source and proprietary tools.

Therefore, A-automation of tasks in a deployment pipeline-is the most universally correct statement.

NEW QUESTION # 82

What should we measure in preference to outputs and productivity?

- A. Utilization and velocity
- **B. Outcomes and value**
- C. Lines of code and deployment frequency
- D. Maturity and capability

Answer: B

Explanation:

DevOps shifts the focus from activity-based metrics (outputs) to impact-based metrics (outcomes and value).

Measuring outcomes means assessing whether work delivers the intended business or customer benefit.

Outputs like lines of code, number of deployments, or velocity measure activity but not whether value is being delivered. PeopleCert emphasizes that outcomes should align with business objectives-such as improved customer satisfaction, revenue growth, or reduced failure rates.

Therefore, B-Outcomes and value-is preferred for guiding meaningful improvements.

NEW QUESTION # 83

Which of the following is NOT an example of a feedback loop?

- A. Monitoring/event data
- B. Peer review of changes
- C. Product
- D. Dashboards

Answer: C

Explanation:

Feedback loops are mechanisms that provide information to earlier stages in the process, enabling adjustments and improvements.

* A: Dashboards provide real-time visibility into system health, deployment status, and other key metrics, allowing quick corrective action.

* B: Monitoring and event data supply operational insights (latency, errors, resource utilization) that inform both Dev and Ops.

* C: Peer review of changes allows early detection of issues before integration, improving code quality and reducing defects.

D-Product-isnota feedback mechanism. The product is the outcome of development and delivery; while customer feedback on a product can be part of a loop, the "product" itself is not the mechanism delivering actionable information upstream.

Thus,Dis the correct choice for "NOT" a feedback loop.
