It is a matter of common sense that pass rate of a kind of AAISM exam torrent is the only standard to testify whether it is effective and useful. I believe that you already have a general idea about the advantages of our AAISM exam question, but now I would like to show you the greatest strength of our AAISM Guide Torrent --the highest pass rate. According to the statistics, the pass rate among our customers who prepared the exam under the guidance of our AAISM guide torrent has reached as high as 98% to 100% with only practicing our AAISM exam torrent for 20 to 30 hours.

ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.
Topic 2	<ul style="list-style-type: none">AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.
Topic 3	<ul style="list-style-type: none">AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.

Test AAISM Valid | Valid AAISM Exam Camp Pdf

We offer three different formats for preparing for the ISACA AAISM exam questions, all of which will ensure your definite success on your ISACA Advanced in AI Security Management (AAISM) Exam (AAISM) exam dumps. BraindumpQuiz is there with updated AAISM Questions so you can pass the ISACA Advanced in AI Security Management (AAISM) Exam (AAISM) exam and move toward the new era of technology with full ease and confidence.

ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which of the following controls would BEST help to prevent data poisoning in AI models?

- A. Increasing the size of the training data set
- B. Establishing continuous monitoring
- C. **Implementing a strict data validation mechanism**
- D. Regularly updating the foundational model

Answer: C

Explanation:

The most direct preventative control against data poisoning is robust data validation/ingestion gating: provenance checks, schema and constraint validation, anomaly/outlier screening, label consistency tests, and whitelist/blacklist source controls before data reaches training pipelines. Larger datasets (A) don't inherently prevent poisoning; monitoring (C) is detective; updating a foundation model (D) does not address tainted inputs entering the pipeline.

NEW QUESTION # 17

An organization is updating its vendor arrangements to facilitate the safe adoption of AI technologies. Which of the following would be the PRIMARY challenge in delivering this initiative?

- A. **Unwillingness of large AI companies to accept updated terms**
- B. Failure to adequately assess AI risk
- C. Inability to sufficiently identify shadow AI within the organization
- D. Insufficient legal team experience with AI

Answer: A

Explanation:

In the AAISM guidance, vendor management for AI adoption highlights that large AI providers often resist contractual changes, particularly when customers seek to impose stricter security, transparency, or ethical obligations. The official study materials emphasize that while organizations must evaluate AI risk and build internal expertise, the primary challenge lies in negotiating acceptable contractual terms with dominant AI vendors who may not be willing to adjust their standardized agreements. This resistance limits the ability of organizations to enforce oversight, bias controls, and compliance requirements contractually.

NEW QUESTION # 18

An organization is looking to purchase an AI application from a vendor but is concerned about the security of its data. Which of the following is the MOST effective way to address this concern?

- A. Assess the vendor's publicly available AI usage policy
- B. **Ensure vendors disclose how the application uses the organization's data**
- C. Mandate an AI security audit by an external auditor before procurement
- D. Initiate discussions between the organization's and the vendor's legal teams

Answer: B

Explanation:

The priority control in AI vendor due diligence is ensuring explicit disclosure of data handling: data flows, purpose limitation, retention/deletion, training vs. inference use, isolation controls, access paths, subcontractors, and storage/transfer boundaries. This disclosure is then tied to contractual commitments and measurable controls. A public policy (Option A) may be incomplete; a pre-procurement external audit (Option C) can be valuable but is not always feasible or targeted to your data use; legal discussions (Option D) are necessary for terms but must be grounded in clear, detailed data-use disclosures to be effective.

NEW QUESTION # 19

The PRIMARY benefit of implementing moderation controls in generative AI applications is that it can:

- A. Ensure the generated content adheres to privacy regulations
- B. Increase the model's ability to generate diverse and creative content
- C. Optimize the model's response time
- D. **Filter out harmful or inappropriate content**

Answer: D

Explanation:

AAISM materials identify the primary benefit of moderation controls in generative AI systems as their ability to filter out harmful, offensive, or inappropriate content before it is delivered to users. This safeguards organizational reputation, compliance, and user trust. While moderation may indirectly support compliance with privacy requirements, its main function is ensuring that outputs align with ethical and safety standards.

Moderation does not enhance creativity or response speed. Its primary value is in controlling the quality of generated outputs by blocking harmful content.

NEW QUESTION # 20

An organization implementing a large language model (LLM) application notices significant and unexpected cost increases due to excessive computational resource usage. Which vulnerability is MOST likely in need of mitigation?

- A. Excessive agency
- B. Sensitive information disclosure
- C. System prompt leakage
- D. **Unbounded consumption**

Answer: D

Explanation:

AAISM highlights unbounded consumption (token/payment exhaustion, unmetered tool calls, prompt bombs) as a key LLM risk affecting cost and availability. Controls include request quotas, max tokens, rate-limits, budget guards, circuit breakers, and cost-aware routing. Excessive agency (A) relates to unsupervised actions; sensitive disclosure (B) and prompt leakage (C) are confidentiality risks, not primary drivers of runaway compute spend.

NEW QUESTION # 21

.....

Our AAISM exam braindumps are famous for the advantage of high-efficiency and high-effective. And it is proved by the high pass

rate. The 99% pass rate is a very proud result for us. If you join, you will become one of the 99% to pass the AAISM Exam and achieve the certification. Believe in yourself, you can do it! Buy AAISM study guide now and we will help you. Believe it won't be long before, you are the one who succeeded!
