Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q123-Q128):

NEW QUESTION # 123

The importance of VPN policies for remote users is to ensure:

- A. Remote users cannot access sensitive corporate resources
- **B. Secure and encrypted access to corporate resources from any location**
- C. That remote users have a slower connection to prioritize office users
- D. The use of public Wi-Fi networks for corporate access

Answer: B

NEW QUESTION # 124

Refer to the exhibit. An engineer must troubleshoot an incident by using Cisco Secure Cloud Analytics. What is the cause of the issue?

- A. Ping of Death attack toward the host that has IP address 10.10.10.10
- B. SYN flood attack toward the DNS server that has IP address 10.10.10.10
- C. TCP fingerprinting toward the 50.10.10.0/24 network
- **D. DoS attack toward the 50.10.10.0/24 network from an internal IP address**

Answer: D

Explanation:

The flow data in the exhibit shows multiple short-duration, high-volume HTTPS connections (443/TCP) from IP 10.10.10.10 to multiple destination IPs in the 50.10.10.0/24 network. All flows are 22 seconds long and transfer exactly 1.77M of data. This uniform behavior to a large set of IP addresses strongly indicates a Denial of Service (DoS) pattern, where an internal host (10.10.10.10) is overwhelming external systems in the 50.10.10.0/24 range.

The SCAZT guide (Section 6: Threat Response, Pages 114-117) explains how Secure Cloud Analytics uses NetFlow and behavioral modeling to identify such volumetric threats. Key identifiers include:

Same connection size (1.77M)

Multiple unique peer IPs in a single external subnet

Same destination port and protocol (HTTPS)

Zero TCP connections completed, indicating unacknowledged connections

This matches the behavioral pattern of a DoS originating from an internal host.
